Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables

somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

In beef prices sirloin steak averaged slightly higher at 30.2 cents per pound in July, as compared with 29.7 cents in June. Prices were slightly higher in most localities. Round steak also advanced slightly, averaging 24.5 cents per pound. Shoulder roast showed little change, averaging 16 cents per pound as compared with 16.2 cents in June. Veal, roast, declined from 18.3 cents per pound in June to 18.1 cents in July. Mutton and fresh pork were steady while salt pork declined slightly. Breakfast bacon was up from an average of 38.9 cents per pound to 39.2 cents. Boiled ham also advanced, averaging 61.3 cents per pound as compared with 60.7 cents in June. In fresh fish cod steak advanced while halibut and whitefish were slightly lower. Salt cod was up from 20.8 cents per pound to 21.2 cents. Lard was down in the average from 24.4 cents per pound in June to 24.1 cents in July. Slightly lower prices were reported from most localities.

* LABOUR GAZETTE, December, 1923, page 1442.

Eggs showed a general advance. Specials and extras averaging 37.6 cents per dozen in July as compared with 35 cents in June and cooking averaging 33.7 cents per dozen in July as compared with 31.6 in June. No changes were reported in milk prices. Dairy butter averaged slightly lower at 35.7 cents per pound while creamery was somewhat higher in the average at 40.9 cents per pound. Cheese was steady.

Lower prices for bread were reported from Amherst and London while an increase was reported from New Westminster. Flour was unchanged in the average, increases in some localities being offset by declines in others. Rolled oats was steady. Rice and tapioca showed little change. Onions were up from an average of 8.6 cents per pound in June to 9.5 cents in July. Potatoes averaged slightly higher at \$1.35 per bag as compared with \$1.31 in June. Evaporated apples and prunes showed little change. Raisins were steady. Raspberry jam declined slightly, averaging 88 cents per four-pound tin. Sugar showed a slight decline in many localities, granulated averaging 8.4 cents per pound and yellow averaging 8 cents per pound. Coffee and tea were practically unchanged. Cream of tartar declined from an average of 62.9 cents per pound in June to 61.7 cents in July.

Anthracite coal averaged \$16.51 per ton. Advances in price were reported from Bathurst, Sorel, St. Hyacinthe, Montreal and Stratford. Bituminous coal averaged slightly lower at \$10.70 per ton. No changes were reported in the prices of hardwood or softwood, the average of the former being \$12.50 per cord and of the latter \$8.84 per cord. Coal oil was slightly lower at 30.3 cents per gallon in July as compared with 30.5 cents in June.

A slight decline in rent was reported from Toronto.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices again showed a downward tendency. No. 1 Manitoba Northern cash wheat averaged \$1.62 per bushel as compared with \$1.71 in June. The low price for the month was \$1.56½ per bushel reached near the beginning and the high \$1.71½ reached toward

the middle of the month. Influences tending to higher prices such as the small American crop, reports of damaging rains from Europe and of rust in some parts of the Canadian West were counteracted by the generally good prospects for the Canadian crop and the lack of export business. Western oats declined from 64½ cents per bushel to 59 cents, American corn from \$1.28½ per bushel to \$1.22 and flaxseed from \$2.37 per bushel to \$2.22. Flour at Toronto fell from \$10.02 per barrel to \$9.10. Shorts fell from \$30.50 per ton to \$30.30. Rubber prices continued to advance, a grade of Ceylon being up from 76½ cents per pound to \$1. Bananas at Montreal declined from \$4 per bunch to \$3.75 and oranges from \$10 per box to \$5.50-\$6. Currants were slightly higher. Raw linseed oil declined from \$1.19 per gallon to \$1.11. Sugar continued to decline, raw being down from \$3.96 per hundred to \$3.84 and granulated from \$6.22 per hundred to \$6.13. Coffee was 2 cents per pound lower at 28 cents. Turpentine was down from \$1.65 per gallon to \$1.56. Western cattle at Winnipeg declined from \$7.17½ per hundred to \$6.45 and choice steers at Toronto from \$7.50 per hundred to \$7.47½. Hogs were up from \$13.07 to \$13.85 per hundred. Bacon and ham advanced, the former from 32-34 cents per pound to 34½-36 cents and the latter from 32 cents per pound to 33-33½ cents. Creamery butter at Montreal advanced from 36 cents per pound to 38 cents and creamery prints at Toronto from 38 cents per pound to 41 cents. Cheese advanced 3 cents per pound to 23 cents. New laid eggs were up from 37-39 cents per dozen to 40-42 cents. The price of cotton was again firmer, advancing at New York from 24 cents per pound to 24½ cents. Unfavourable crop reports were said to be the cause of the increase. Raw silk was slightly higher at \$6.45 per pound. British Columbia shingles advanced from \$3.35 per M to \$3.75 and spruce lath at St. John from \$5 per M to \$5.25. Iron and steel markets continued dull. Steel billets were down from \$35-\$45 per ton to \$33-\$43. Prices of non-ferrous metals were higher. Copper rose from \$15.50 per hundred to \$16.15, lead from \$8.45 per hundred to \$8.70, tin from 56 cents per pound to 58½ cents, zinc from \$8.60 per hundred to \$8.65 and silver from 68½ cents per ounce to 70½ cents.

PRICES AND PRICE INDEXES*, 1913-1924

THE third report on wholesale prices in Canada, recently issued by the Dominion Bureau of Statistics, deals mainly with the year 1924. It contains a detailed analysis of the wholesale prices situation during last year, together with the prices of the 236 commodities represented in the index number by months for 1924, and the yearly average prices back to 1913. In addition, there are tables and charts showing the movement by groups from 1913 to 1924 by the three methods of classification; according to chief component material by months since 1913; according to purpose and according to origin, by months from 1919 to 1924 and by years from 1914 to 1924. These tables were published in the supplement to the issue of the LABOUR GAZETTE for January, 1925, along with an analysis of the movement in some detail prepared by the Bureau. The current index numbers of wholesale prices, with comparative figures back to 1913, are given monthly in the LABOUR GAZETTE, being compiled from the monthly statements issued by the Bureau. The following general remarks upon the wholesale prices movement in 1924 are reproduced from the report.

The general level of prices continued to move upward in 1924, being 2.2 points above the index for 1923, which was 153.0. The rise was due to the upward movement in two out of eight main groups, the other six showing declines. Grains, fruits and other vegetable products and the textile group were the two which experienced the movement to higher levels, but it was in the main the influence of the former which caused the general index number to rise above that for 1923.

During January and February the general index was 156.9 and 156.8 respectively, showing a rise from December, 1923, when it was 153.5. Commencing with March there was a decided downward movement, which reached 150.6 in May. This decline was coincided with a general slowing up of business in most industrial nations. In June, however, the movement turned upward and continued, with the exception of a slight set-back in September, to rise steadily until 160.9 had been attained in December. The chief influences which account for the rise since June were: higher grain prices, the acceptance and operation of the Dawes scheme, bringing a more hopeful outlook in Europe, stabilization of currencies and settlement of political conditions due to the election of strong governments.

The report contains also a section on retail prices in Canada, compiled from data given monthly in the LABOUR GAZETTE, with certain index numbers in the form of percentages of changes calculated by the Bureau of Statistics.

* The methods used in the construction of the index number, as to weighting, grouping, etc., were dealt with in an appendix to the first report as well as in the second report, and were described in the LABOUR GAZETTE for June, 1923, pp. 690-692.

There is also a section on prices in other countries with tables showing the principal index numbers of prices, wholesale and retail, from 1913 to 1924. Similar tables are published from time to time in the LABOUR GAZETTE.

New features include index numbers of security prices, common stocks, preferred stocks and bonds, and of street car fares. The

index number of common stocks includes ten bank, ten public service, and thirty-one industrial stocks, fifty-one in all. The index of preferred stocks comprises twenty-three industrial preferred stocks, and that of bonds includes eighteen industrial and public service bonds. The names of the stocks and bonds used in the compilation are given in the appendix to the report. The principle of weighting employed in the construction of these index numbers of security prices is similar to that used for the Bureau's index number of wholesale prices. The accompanying tables show the movement of security prices and of street car fares, that for the former being a summary of the table in greater detail printed in the report.

In calculating the weighted index numbers 1913 was taken as the base year. The amount of stock outstanding in that year for each individual security was taken as a weight. The average price of the security in 1913, multiplied by the weight, gives the basis upon which index numbers are calculated. These amounts are represented by 100. Prices in subsequent periods are multiplied by the same weights and the resulting amounts divided by the amount pertaining to the base year: this result multiplied by 100 gives the index number which expresses in percentage the relation to values in the base year. This method of computing index numbers is known as the aggregative.

In the case of common stocks, in order to combine the three main groups Banks, Service and Industrial Stocks into a general index number, a second system of weighting had to be applied. Each group was multiplied by an estimated figure intended to represent the approximate importance which each group had among all common stocks, whether included in the index or not. The value of outstanding stock was used as a base for the group weights also.

BRITISH GOVERNMENT AND THE COAL MINING INDUSTRY

ON June 30 last, the Mining Association of Great Britain gave notice to the Miners' Federation of Great Britain for the termination at midnight on July 31 of the wages agreement between the parties, dated June 18, 1924. Subsequently new wages proposals involving wage reductions and an extension of hours were communicated by the Association to the Federation. These were considered by a National Delegate Conference of the Federation which met in London on July 3, and were rejected. Mr. Baldwin, Prime Minister, announced in the House of Commons on July 13 that the First Lord of the Admiralty (Mr. Bridgeman), the Minister of Labour (Sir A. Steel-Maitland) and the Secretary for Mines (Colonel Lane-Fox) had had conversations with the representatives of the owners and the representatives of the miners; that in view of the situation disclosed by those conversations the Government had decided to set up a Court of Inquiry under the Industrial Court Act; and that the Minister of Labour had set up a Court accordingly. The Court consisted of the Rt. Hon. H. P. Macmillan, K.C., M.A., LL.D., Chairman, Mr. W. Sherwood; and Sir Josiah Stamp, G.B.E., D.Sc. The following are the terms of reference to the Court: "To inquire into the causes and circumstances of the dispute in the mining industry and to report thereon."

The Miners' Federation refused to take part in the inquiry, or to resume negotiations with the owners unless the proposals of the latter were withdrawn. Consequently, when the Court of Inquiry met, the Federation was not represented.

Subsequent proposals of the Association for a joint conference were rejected by the Federation and on July 23 a general strike of coal miners was announced for July 31.

The General Council of the Trade Union Congress arranged that in the event of a strike no coal would be handled by the railway men or other transport workers.

Conferences of the separate parties were then held with Mr. Bridgeman, acting on behalf of the Government, but without result, and on July 27 the Prime Minister after meeting a special committee of the Trade Union Congress, decided to undertake personally the negotiations for the government. The following day the Court of Inquiry issued a report, one of the main conclusions being "that the workers are justified in claiming that any wages agreement which they can be asked to accept should provide for a minimum wage."

On the last day of the month, after repeated conferences with each of the parties, the Prime Minister made the following official statement:—"The assistance to be given by the Government to the coal mining industry will take the form of subvention in aid of wages during the nine months, August 1, 1925 to May 1, 1926. During this time wages will be paid on the basis of the 1925 agreement, but in any month in which wages, calculated in connection with the recognized ratio of divisions between wages and profits, would be lower in any district than the wages payable at the minimum percentage under that agreement, the deficiency will be made up by the Exchequer. Mr. Baldwin also announced that a Royal Commission would be appointed to conduct a complete inquiry into the industry.

In view of the Prime Minister's proposals the owners agreed to suspend their notices for a fortnight, and the strike orders were cancelled by the Union. The Government's plan was ratified in Parliament on August 6 by a vote of 351 to 16.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

According to the latest information available wholesale prices and the cost of living continued to fall in most countries with the exception of France, Italy and the United States. In Great Britain, Belgium and Poland there were slight upward turns in retail prices and the cost of living due to seasonal variations. The *Statist* for July 18 commented on international price levels as follows:—

"Last month's considerable rises in the internal price levels of France and Italy are an interesting commentary on the recent depreciation of the franc and lira. Prices in the United States have made a further recovery. Prices in other gold centres have also shown a tendency to recover. It can only be deduced from these observations that the British price-level is now in the process of adjustment necessary to place our industries, and especially our export industries, on a sound competitive basis."

Great Britain

WHOLESALE PRICES.—The Board of Trade index number was 157.7 for June, on the base 1913=100, having thus registered a further slight decline, of 0.8 per cent. Foods rose very slightly, and non-foods declined 1.3 per cent, the principal change in the latter being a decline of 4.3 per cent in textiles other than cotton.

The *Statist* index number (in continuation of Sauerbeck's figures, base period 1867-77) showed a further decline during June in the general level of prices. At the end of the month the index was 131.2, being 3.3 per cent below the level at the end of May. The decline was most marked in foodstuffs, which fell 6.6 per cent. In the vegetable food section potatoes and grains fell heavily. Beef, mutton and bacon caused the decline in animal food. Materials declined 1.2 per cent. In the minerals section small advances were shown by copper, tin and lead, and further falls in pig-iron and in coal prices. In textiles gains were registered by cotton, flax, hemp, wool and silk, and a fall was shown by jute.

The *Times* index number, on the base 1913=100, after a further decline of 2.2 per cent for the month, was 155.6 at the end of June, this being the lowest figure recorded since the war, although the same low level was reached on two other occasions. During June food prices were affected by some sharp seasonal movements. There were declines in foreign wheat, flour and maize, and rises in rice, some meats, and in both fish and eggs. Potatoes showed a heavy seasonal fall, and there were declines in iron and steel and in coal. Cotton rose slightly and the other textiles group declined.

COST OF LIVING.—The official index number showed no change for August, remaining at 173 on the base July, 1914=100. Foods rose one point, clothing declined slightly, and other items showed no change. The index numbers of the groups were as follows: food, 168; rent, 147; clothing, 225-230; fuel and light, 180; sundries, 180.

Austria

WHOLESALE PRICES.—The index number of the Official Statistical Office, reckoned in crowns, first half of 1914=1, was 20,058 in April, 19,854 in May, 20,364 in June, and 19,685 in July, always at the middle of the month. In the last of these periods the decline was 3.3 per cent. This fall was chiefly owing to cheaper prices for grain (new crop), especially foreign wheat, while domestic wheat (old crop) was unchanged. The drop in prices of potatoes also contributed to the fall in the index. As a contrast to the foods group, there was an upward movement in industrial materials, especially marked in cotton, wool and leather. With these changes in prices the gap between foods and materials became wider than in the previous month.

COST OF LIVING.—There was a slight decline in April in the index number of the Joint Commission on the Cost of Living, it being 13,432 on the base July, 1914=1, or 1.7 per cent lower than the previous month. Foods declined 2.4 per cent and the other groups showed very little change.

Belgium

WHOLESALE PRICES.—The official index number of the Ministry of Industry and Labour, on the base April, 1914=100, was almost unchanged in May, being 537 as against 538 in April. The principal changes were increases in the groups food products, resin and raw

rubber, and declines in glass products, and textiles.

RETAIL PRICES AND COST OF LIVING.—The official index number of retail prices for the Kingdom, on the base April, 1914=100, was 505 in June, an increase of 3 points, and the first rise since December, 1924. The index number of cost of living of a middle-class family with moderate income, on the base 1921=100, rose 2.4 per cent to 131.36 in June. Foods rose 3.9 per cent, and heat and light declined slightly. The other items showed only slight changes. The index number of cost of living of a working class family, on the same base, rose 2.8 per cent to 134.95 in June. Foods rose 4.3 per cent, clothing rose 0.3 per cent, heat and light declined slightly and other items remained almost unchanged.

France

WHOLESALE PRICES.—The index number of Statistique Générale, on the base July, 1914=100, rose in June 4.3 per cent to 554. Foods rose 3.4 per cent, all groups displaying the rising tendency; and industrial materials rose 5.1 per cent with marked rises in all groups.

COST OF LIVING.—The official index number of cost of living at Paris rose one per cent in the second quarter of the year to 390, on the base 1914=100. Foods rose 2.2 per cent, clothing rose slightly, heat and light declined 6.8 per cent and rent and sundries showed no change.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100 (gold prices), rose 1.4 per cent to 133.8 in June. Foods rose 2.5 per cent to 133.3 and materials declined 0.7 per cent to 134.7. Goods produced rose 2.1 per cent to 128.1 and goods imported fell 1.3 per cent to 162.3.

Poland

WHOLESALE PRICES.—The index number of the Central Bureau of Statistics, showing the trend of gold prices, pre-war prices=100, was 118.0 in May, 1.2 per cent below the April level. There were no marked changes in the groups with the exception of textiles which showed a decline of 7.2 per cent.

COST OF LIVING.—The official index number of cost of living of a family of four, at Warsaw, on the base 1914=100, rose slightly in June to 148.4, which was 0.8 per cent above the May level. Foods rose slightly, fuel and light declined slightly, and other elements showed no change.

Spain

WHOLESALE PRICES.—The index number of the Director General of Statistics, on the base 1913=100, was 191 in May as against 190 in April. Foods declined 4.1 per cent and materials declined only one point. There was a considerable drop in prices of textiles and leather, and a rise in prices of metals.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base "respective months of 1913=100," fell one point in June to 161. Raw materials declined three points to 154, semi-manufactured goods rose one point to 163, and manufactured goods showed no change, at 164.

COST OF LIVING.—The index number of the Board of Social Welfare, on the base July, 1914=100, fell one point at July 1 below the level three months earlier, to 176. Foods, fuel and light, clothing and sundries all declined slightly, while housing and taxes showed no change.

United States

WHOLESALE PRICES.—Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was \$14.2438 at August, which was 2.8 per cent above the level of one month previous. This was the third successive rise of the index.

"Contributing strongly to this latest advance were the textiles, provisions, metals and, most marked of all, miscellaneous products, especially rubber. Other groups gaining were live stock, fruits and coal and coke. The two groups declining were breadstuffs and naval stores, both of these fractionally. Of the groups remaining unchanged there were, as already stated, four, these being hides and leather, oils, building materials and chemicals and drugs. In the groups advancing, textiles, for instance, hemp, flax and cotton goods, imitated the strength of wool in June. Raw cotton did not change greatly. Beeves, sheep and hogs all rose in July, as did meats, eggs and butter, but all the breadstuffs were below the June levels. The strength in metals was in copper, lead and tin, iron and steel not sharing. The deadlock in the anthracite wage scale dispute accounts for the advance in anthracite stove sizes, 50 cents from wholesalers and 25 cents from retailers, although the prices of the big producers were only marked up the usual 10 cents per ton. Hops, rubber and cotton seed account for the rise in miscellaneous products."

The Bureau of Labour Statistics index number rose 1.4 per cent to 157.4 in June, on the

base 1913=100. There were increases in prices shown by the groups farm products, foods, fuel and lighting, and miscellaneous articles, and slight declines were shown by cloths and clothing, metals and metal products, building materials, chemicals and drugs and house furnishing goods.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, rose 2 points in June to 167 after having remained stationary for four months. The variation was a result of an increase 1.9 per cent in the foods group, of 1.2 per cent in the clothing group and a slighter increase in the fuel and light group.

The index number of the Massachusetts Special Commission on the Necessaries of

Life, having as base average retail prices in 1913=100, showed an increase in June of 1.0 per cent over the May level, reaching 162.8. Foods increased about 2 per cent owing to increases in prices of meats, fish, eggs, lard, tea, coffee, flour, meal, bread, rice, potatoes, onions, prunes, vinegar, dried beans, oatmeal and canned goods. There were slight decreases in prices of dairy products, sugar, molasses and evaporated apples. The clothing section showed an increase of about 5% of one per cent due to increases in prices of suits, hats, gloves, hosiery, men's shirts and women's shoes. Underwear, men's shoes and cotton goods showed slight decreases. There was a slight increase in the fuel and light section, and shelter and sundries showed no change.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1925

THE record of fatal industrial accidents in Canada for the second quarter of 1925 showed an increase of 34 over that of the previous quarter, and a decrease of 80 as compared with the record of the similar period in 1924. There were in all 240 fatalities reported. Of these 67 occurred in April, 102 in May and 70 in June. In regard to two fatalities reported during the quarter, one to a cooper in Montreal and the other to a section-man at Minto, Manitoba, where the victims collapsed while at work, it is doubtful if they were due to the nature of the employment. Another fatality, that of an electrician reported as electrocuted while voluntarily removing wires from a burning house, cannot be regarded as due to an industrial accident, as the work at which the victim was engaged was not in the course of his employment; but it is included in the report because of the nature of his occupation. There were also 15 fatalities reported during the quarter which resulted from accidents in the first quarter.

Logging with 39 fatalities reported, again showed the highest accident record of the individual industries. Twelve deaths in this industry resulted from drowning. In mining,

smelting and quarrying the lives lost totalled 38; in the steam railway service there were 27, and in agriculture 19. In the manufacturing industries there were 40, of which 14 were in the iron, steel and products group, 9 in the saw and planing mills and six in the vegetable products, drink and tobacco group. In water transportation 17 lives were lost; nine of these were due to drowning when a tug boat was struck by a steamer she was about to tow alongside of wharf. In the public utilities (including telephone and telegraph services) there were 12 employees killed, of whom 7 were electrocuted and 5 fell from poles. Altogether there were 18 deaths due to electrocution during the quarter; 6 of these were in the mining group, and 7, as already stated, in the public utilities group. Ten deaths resulted from the use of explosives, three occurring at one time through a premature explosion at a quarry, and two through a premature explosion in a mine. Four persons died from infection following injuries.

The following table has been prepared from information received from all sources available, but it does not necessarily include all the industrial accidents that may have occurred:—

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1925

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Farmer.....	Cardston, Alta.....	April 10	Struck by stick which broke while being used as lever to tighten wire.
Farmer.....	Ste. Flore Village, Que..	" 11	22	Struck by board which fell on saw and was hurled off.
Farmer.....	Near St. Stephen, N.B..	" 16	Kicked by horse.
Farmer.....	Kamloops, B.C.....	" 23	54	Run over when horses hitched to harrow stamped.
Farmer.....	Mount Stewart, P.E.I..	" 30	65	Clothing caught in circular saw.
Farmer.....	Pipestone, Man.....	" 22	Run over by frightened team.
Farmer.....	Brookdale District, Man.	May 7	72	Knocked down and run over by horses while unhitching.
Farmer.....	Madoc, Ont.....	7	Thrown from tractor when team struck stone pile.
Farmer.....	Stettler, Alta.....	7	53	Crushed between steering wheel of tractor and separator.
Farmer.....	Near Malcolm, Ont.....	" 14	13	Thrown from land roller when horses ran away.
Farmer.....	Douro, Ont.....	" 19	39	Struck by beam when demolishing barn.
Farmer.....	Leroy, Sask.....	" 21	55	Fell from mowing machine and dragged by clothing caught in gears.
Farmer.....	Regina, Sask.....	" 24	Thrown from harrow when it struck stone.
Farmer's son.....	Cap Santé, Que.....	June 1	Struck by saw which left frame while sawing firewood.
Farm hand.....	Castleton, Ont.....	" 3	20	Injured at barn raising (no further particulars).
Farmer.....	Chatham, Ont.....	" 9	Thrown from wagon when team became frightened.
Farmer.....	Major, Sask.....	" 15	52	While mounting wagon the team reared knocking man down.
Farmer.....	Near Red Deer, Alta...	" 28	40	Struck by flying stone.
Farmer.....	Near Bracebridge, Ont..	" 23	72	Struck by falling beam.
FISHING AND TRAP- PING—				
Lobster fisherman.....	Lunenburg, N.S.....	April 15	16	Drowned when boat upset.
Fisherman.....	Point Lambert, B.C....	" 28	Drowned when boat upset.
Lobster fisherman.....	Spring Valley, P.E.I....	May 20	20	Drowned while hauling lobster traps—fell overboard.
LOGGING—				
Bolt cutter.....	Jessica, B.C.....	April 4	46	Struck by falling tree.
Woodsman.....	Restigouche Co., N.B..	" 12	20	Fell from load.
Labourer.....	Restigouche Co., N.B..	" 14	27	Thrown on saw.
Edger spotter.....	Victoria, B.C.....	" 13	41	Struck by lumber kicked back by edger.
Boorman.....	Victoria, B.C.....	" 14	45	Struck by log which rolled from train.
Foreman.....	O'Brien Bay, B.C.....	" 15	56	Struck by log at mouth of chute.
Signal man.....	Allison Harbour, B.C..	" 17	16	Struck by tree top when snag hit by log being hauled flew through the air bending top.
River driver.....	Blind River, Ont.....	" 18	18	Drowned.
Rigging slinger.....	Ocean Falls, B.C.....	" 21	Caught between stump and tree during yarding operations.
Logger.....	Near Salmon Arm, B.C..	" 25	Struck by falling tree.
River driver.....	Garden River, Ont.....	" 30	15	Drowned.
Brakeman.....	Haney, B.C.....	May 1	Struck by engine.
Clerk.....	Near Foleyet, Ont.....	" 5	Drowned.
Labourer.....	Fauquier, Ont.....	" 5	Drowned.
Labourer.....	Pembroke, Ont.....	" 6	63	Struck by train.
River driver.....	Gloucester Co., N.B....	" 7	22	Drowned.
Loader.....	Menzies Bay, B.C.....	" 8	35	Crushed under falling logs.
River drivers (2).....	Linton Junction, Que..	" 12	23, 27	Drowned—swept over rapids.
Woodsman.....	Kings Co., N.B.....	" 12	Struck on side while lifting log.
Labourer.....	Laforest, Ont.....	" 16	65	Fell off wagon.
Employee.....	Lake Cowichan, B.C.,..	" 19	35	Struck by choker hook which caught on stump while being drawn back.
Driver.....	Montreal River, Ont....	" 25	24	Drowned.
Employee.....	Cobden, Ont.....	" 26	Struck by log which caught in drawing chains.
River driver.....	Flanders, Ont.....	" 27	Drowned.
River driver.....	Batchewana River, Ont..	" 31	23	Drowned.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1925 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—Con.				
Employee.....	Yennadon, B.C.....	June	4 58	Struck by rolling tree while hauling poles.
River drivers (2).....	Fauquier, Ont.....	"	4 23, 25	Drowned.
Flume foreman.....	Nakusp, B.C.....	"	5 27	Drowned.
Labourer.....	Kimmount, Ont.....	"	6	Struck by stick.
Rigger.....	Port Renfrew, B.C.....	"	6	Crushed between log and stump.
Labourer.....	Trout Creek, Ont.....	"	12	Crushed by car.
Bridge foreman.....	Allco, B.C.....	"	13 38	Struck by limb of tree and knocked from bridge.
Truck driver.....	Saseenos, B.C.....	"	12	Struck at level crossing by railway gas car.
Woodsman.....	Langley, B.C.....	"	19	Struck by falling tree.
Forest ranger.....	Port Neville, B.C.....	"	22	Burned in forest fire.
Camp worker.....	Near Duncan, B.C.....	"	24 17	Struck by limb of tree.
Brakeman.....	Menzies' Bay, B.C.....	"	30	Run over by train.
MINING, SMELTING AND QUARRYING—				
<i>Metalliferous Mining</i>				
Ore loader.....	Kimberley, B.C.....	April	4 27	While lowering car onto truck, brake chain broke. Fell from car and run over.
Employee.....	Timmins, Ont.....	"	8	Crushed by falling rock.
Electrician.....	South Porcupine, Ont.....	"	18 23	Electrocuted underground.
Employee.....	Timmins, Ont.....	"	18	Premature explosion.
Scaler.....	Schumacher, Ont.....	"	27 43	Fall of ground.
Employee.....	Timmins, Ont.....	"	29	Crushed between car and chute post.
Electrician.....	Tadanac, B.C.....	May	12 21	Electrocuted.
Electrician.....	Hedley, B.C.....	"	13 42	Electrocuted.
Miner.....	Extension, B.C.....	"	15 57	Fall of rock from roof.
Labourer.....	Galetta, Ont.....	"	21	Fell down stope.
Employee.....	Coniston, Ont.....	"	19 29	Electrocuted at smelter.
Employee.....	Kirkland Lake, Ont.....	"	29 28	Fall of rock.
Employee.....	Timmins, Ont.....	June	5 50	Fall of rock in stope.
Employee.....	Timmins, Ont.....	"	10 under 21	Crushed by car underground.
Employee.....	Creighton Mines, Ont.....	"	19	Walked into blast.
<i>Coal Mining:</i>				
Machinist.....	Coleman, Alta.....	April	4	Electrocuted. Ladder with wire on side in being moved swung against live wire.
Miner.....	Blairmore, Alta.....	"	15 35	Overcome by gas.
Miner.....	Clover Bar, Alta.....	"	20 38	Buried by falling rock.
Miner.....	Westville, N.S.....	May	3 32	Fall of coal.
Miner.....	Wakesiah Mine, B.C.....	"	6 over 21	Fall of rock from roof.
Miner.....	Hillcrest, Alta.....	"	8 52	Crushed by falling coal.
Miner.....	Wellington Mines, B.C.....	"	15 57	Struck by fall of rock.
Labourer.....	Inverness, N.S.....	"	23	Struck by empty rack.
<i>Non metallic mineral mining and quarrying:</i>				
Employees at quarry (3).....	Hagersville, Ont.....	April	8	Premature explosion.
Employees at stone quarry (2).....	Dundas, Ont.....	June	5 25, 35	Crushed by landslide.
Miners (2).....	Perkins Mill, Que.....	"	4 37	Premature explosion.
Employee of gyp-sum company.....	Winnipeg, Man.....	"	5	Caught in belt while oiling bearings.
Employee at quarry.....	Montreal, Que.....	"	20 47	Fall of rock from side.
<i>Clay products and structural materials:</i>				
Employee at brick works.....	Toronto, Ont.....	April	1 61	Caught on shafting.
Employee at brick works.....	Cooksville, Ont.....	"	2 46	Struck by belt which broke while being placed on machine.
Employee on concrete product company.....	Chatham, Ont.....	May	4	Caught between pipes while rolling them to skid.
Concrete worker.....	Trail, B.C.....	"	12 23	Electrocuted while walking on a steel flue chamber.
Employee at brick works.....	Victoria, B.C.....	June	17	Crushed by falling wall.
Employee of cement works.....	Longue Pointe, Que.....	"	22	Caught in belt.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1925 (*Continued*)

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—				
<i>Vegetable foods, drink and tobacco:</i>				
Baker.....	Winnipeg, Man.....	April 8	37	Cellulitis following infection arising from small abrasion on ear.
Employee of candy company.	Montreal, Que.....	" 15	45	Struck by belt which slipped from pulley.
Superintendent of bread company	Kazabazua, Que.....	May 2	35	Asphyxiated.
Flour mill employee.	Roberval, Que.....	" 15	17	Caught in belt and whirled to death.
Employee at brewery.	Belleville, Ont.....	" 15	55	Crushed by heavy tank which tilted from truck while unloading.
Fireman at distillery.	Walkerville, Ont.....	" 17		Head cut (no further particulars).
<i>Animal edible products:</i>				
Driver for dairy..	Chatham, Ont.....	April 19	35	Struck by automobile.
Teamster with packing company. -	Stratford, Ont.....	June 6	49	Run over by dray.
<i>Textiles:</i>				
Employee of textile company.	Montreal, Que.....	May 4	16	Caught in wheel of machinery.
<i>Leather, fur and products:</i>				
Helper with footwear company.	Brampton, Ont.....	May 7		Fell off support—severed artery in leg.
Labourer with leather company.	Bracebridge, Ont.....	" 18	57	Crushed by drum.
<i>Saw and planing mill:</i>				
Employee at saw-mill.	Brockway, N.B.....	April 14		Caught in machinery.
Employee at saw-mill.	Wilson, Ont.....	" 18		Drowned.
Splitterman.....	Vancouver, B.C.....	" 22	47	Struck by shingle bolt hurled from saw.
Sawyer.....	Great Falls, Man.....	" 24		Struck by lumber which kicked back from edger saw.
Employee at saw-mill.	St. Boniface, Man.....	" 24		Caught by wheels while feeding machine.
Employee.....	St. Vincent de Paul, Que.	" 29	65	While testing machine was struck by board thrown back from saw.
Employee at mill.	South Nelson, N.B.....	May 9	45	Caught in flywheel while adjusting.
Labourer at planing mill.	Smiths Falls, Ont.....	June 2	37	Struck by board.
Employee at saw-mill.	Clyde River, P.E.I.....	" 4		Came in contact with revolving saw while adjusting blower.
<i>Pulp, paper and paper goods:</i>				
Oiler at paper mill	Ottawa, Ont.....	" 3		Struck by lumber which fell from sling while hoisting.
Employee at pulp mill.	Jonquieres, Que.....	" 8	29	Fell into pulp crusher.
Labourer at pulp mill.	Sturgeon Falls, Ont.....	" 18	33	Struck by block of wood falling from overhead conveyor.
<i>Iron, steel and their products:</i>				
Employee at steel works.	Toronto, Ont.....	April 1	61	Caught in belt of machine.
Employee at moulding shop.	Stratford, Ont.....	" 7	47	Struck by logs falling from pile.
Iron worker.....	Lachine, Que.....	" 27	55	Struck by piece of iron.
Electrician at steel works.	Hamilton, Ont.....	May 6	22	Electrocuted. Length of conduit he was handling came in touch with switch.
Machinist at garage.	Montreal, Que.....	" 11	23	Fell down elevator shaft. While repairing car, power was on and deceased laid his hand on starter and car broke through wooden barrier into shaft.
Cooper.....	Montreal, Que.....	" 15	60	Syncope. Collapsed at work.
Owner of metal works.	Ottawa, Ont.....	" 18		Explosion—burned.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1925 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—				
<i>Iron, steel and their products—Con.</i>				
Labourer at machinery works.	Toronto, Ont.....	" 23	54	Strained while moving machinery.
Truck driver with wire company.	Hamilton, Ont.....	" 23	32	Fell off truck.
Welder.....	Edmonton, Alta.....	" 29	25	Tank exploded during welding owing to failure to remove valve.
Employee of steel works.	Toronto, Ont.....	June 5	53	Thrown from crane; due to failure to throw off switch while moving trolley during painting.
Helper with foundry company.	Galt, Ont.....	" 18	29	Hernia.
Signalman at steel plant.	Sault Ste Marie, Ont....	" 29	47	Crushed by hoist. Was sitting on deck of hoist when it swung around.
Electrician at rail way shops.	Point St. Charles, Que..	" 29	61	Electrocuted.
<i>Chemical and allied products:</i>				
Labourer at salt works.	Sarnia, Ont.....	April 20	24	Crushed by pile of salt.
<i>Miscellaneous industries:</i>				
Millwright.....	Northumberland Co., N.B.	May 9	44	Caught in revolving shaft.
Mill hand.....	Winnipeg, Man.....	June 5	39	Clothing caught while oiling bearing with machinery in motion.
CONSTRUCTION—				
<i>Building construction:</i>				
Contractor.....	St. Boniface, Man.....	April 9	52	Dropped dead while wheeling cement.
Plumber.....	Toronto, Ont.....	" 20	25	Struck by steam shovel.
Plumber.....	Montreal, Que.....	" 30	30	Overcome by gas fumes while dismantling gas pipe.
Employee at excavation work.	Silverthorn (York Co.), Ont.	May 4	35	Struck by steam shovel.
Paper hanger.....	Brampton, Ont.....	" 7	25	Fell from scaffold when repairing ceiling.
Labourer.....	St. Boniface, Man.....	" 12	35	Fell through hole on second floor while stripping forms off concrete.
Labourer.....	Toronto, Ont.....	" 15	Crushed under cave in.
Labourer.....	Toronto, Ont.....	" 17	Burned.
Labourer.....	Strathroy, Ont.....	" 25	Fell off building.
Labourer.....	Humberstone, Ont.....	" 27	Crushed by car.
Labourer.....	Cap Richard, Que.....	" 28	24	Lost balance and fell while conveying wheelbarrow of cement along foot bridge.
Crane operator...	Toronto, Ont.....	June 5	53	Fell off crane.
Employee.....	Three Rivers, Que.....	" 5	29	Fell under moving locomotive.
<i>Railway construction:</i>				
Employee with contractor.	Carberry Sd., Man.....	May 16	Struck by train.
Labourer.....	Ford, Ont.....	" 21	38	Ran over by car.
Foreman.....	Paris, Ont.....	" 31	Struck by train.
Labourer.....	Near Taylor, Ont.....	June 11	25	Ran over by car.
Carpenter.....	Brantford, Ont.....	" 19	Fell off roof.
<i>Miscellaneous Construction—</i>				
Workman with contractor.....	Port Hope, Ont.....	April 8	49	Drowned.
Labourer at dock construction....	Ford, Ont.....	" 23	22	Crushed by pile driver.
Employee at sewer construction.	Vancouver, B.C.....	" 25	Cave in of sewer.
Employee at sewer construction.	Toronto, Ont.....	" 30	Fell in trench striking head.
Labourer.....	Chatham, Ont.....	May 4	28	Head crushed by pipe.
Foreman.....	Ottawa, Ont.....	" 5	Strain.
Employee at sewer construction.	Toronto, Ont.....	" 7	Electrocuted—Touched chain attached to crane which came in contact with electric wire.
Tunnelman.....	Exshaw, Alta.....	" 15	30	Tripped and struck head on bracket.

Labourer.....	Kenora, Ont.....	"	29	23 Fell with trestle.
Labourer.....	St. Catharines, Ont.....	"	30	Side of lock wall caved in as men were cleaning lock pit. They had been warned to keep away from spot.
Driller.....	Humberstone, Ont.....	June	8	Explosion.
Bridge carpenter.	Hagensburg, B.C.....	"	13	Fell from bridge.
<i>TRANSPORTATION AND PUBLIC UTILITIES—</i>				
<i>Steam Railways:</i>				
Section labourer.	near Priestly, B.C.....	April	2	64 Thrown from speeder.
Engineer.....	Tormentine Sd., N.B.....	"	4	41 Derailment of engine.
Labourer.....	Kalmar, Ont.....	"	25	18 Struck by train.
Timekeeper.....	Quebec Yard, Que.....	"	29	38 Engine struck motor car.
Sectionman.....	Paris, Ont.....	"	29	35 Fell under car.
Conductor.....	Hearst Yard, Ont.....	May	6	52 Run over by engine while switching.
Engineer.....	Tisdale Siding, Sask.....	"	9	43 Engine derailed.
Call boy.....	Farnham Yard, Que.....	"	12	17 Fell from bicycle under cars being switched
Maintenance man.	near Dill, Ont.....	"	13	22 Fell from hand car and run over by train.
Trackman.....	Rivière Baudette, Que.....	"	15	18 Struck by train.
Gang labourers (2).	Boissevain Sd., Man.....	"	16	Motor cars collided.
Brakeman.....	Kamloops, B.C.....	"	17	45 Run over by train. Fell from caboose.
Track watchman.	Cascade Sd., B.C.....	"	16	50 Velocipede struck by train.
Switch foreman.	Hanna, Alta.....	"	18	35 Struck by car.
Engineer.....	Lacrosse, Sask.....	"	19	43 Wreck.
Sectionman.....	Ford City, Ont.....	"	21	40 Attempted to jump off lorry, slipped and was run over by trailer.
Sectionman.....	Minto, Man.....	"	18	38 Collapsed while at work.*
Labourer.....	near Griswold, Man.....	"	23	25 Track jack slipped and handle struck head.
Car inspector.	Cartier, Ont.....	"	25	41 Caught between cars.
Section foreman.	Paris Jct., Ont.....	"	31	63 Motor car struck by train.
Trackman.....	Mallorytown, Ont.....	June	5	48 Blistered finger—infection.
Brakeman.....	New Westminster, B.C.....	"	6	35 Freight car derailed after striking auto.
Sectionman.....	Rodney, Ont.....	"	13	Fell from hand car.
Inspector.....	London, Ont.....	"	17	Collision.
Yardman.....	Calgary, Alta.....	"	19	37 Crushed between freight car and platform.
Signalman.....	Port Arthur, Ont.....	"	29	47 Attacked by unknown man.
<i>Street and electric railways:</i>				
Lineman.....	Winnipeg, Man.....	April	28	27 Electrocutted when arm came in contact with live wire.
<i>Water transportation:</i>				
Employee on scow.	Castle Falls, Redonda Island, B.C.....	April	11	Drowned.
Coasting sailor.	Isle aux Boudres, Que.....	"	17	45 Burned when tar heating pot took fire.
Deck hand.....	Barnet, B.C.....	May	9	Boat took fire while taking on fuel at oil plant.
Sailor.....	Grosse Isle, Que.....	"	15	51 Drowned. Scaffolding broke while painting steamer side.
Longshoreman.	Montreal, Que.....	June	8	28 Fell over wharf's edge.
Deckhand.....	Montreal, Que.....	"	8	23 Tripped over hatch board—fell into hold.
Lake tug owner.	Slocan City, B.C.....	"	17	22 Fell from rock—drowned.
Crew on tug boat (9).	Quebec, Que.....	"	26	56-54-50 Drowned. Tug boat was struck by steamer while going to assist the larger vessel to her moorings.
Employee on coal barge.	Three Rivers, Que.....	"	29	Crushed by coal in hold of vessel when shovel failed to work properly.

*The Workmen's Compensation Board state that their file regarding this case is not complete, but it is doubtful if the death was due to accident.

Conductor.....	Yahk, B.C.....	"	24	41 Struck by windfall during storm.
Plumber.....	Montreal, Que.....	"	31	30 Overcome by gas from dismantled pipe.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Employer must provide Employees with Safe Conditions of Work

A contracting company fitted up for boarding purposes two cars belonging to the Canadian Pacific Railway Company, and furnished meals therein for the railway employees in connection with work trains. A boy, nineteen years of age, the plaintiff in this case, was employed by the contractors as assistant cook. His duty was to help the cook to prepare and serve the meals and then wash up the dishes. The washing of the dishes was performed in the dining car and the cooking in the cook car. On April 12, 1923, the plaintiff, requiring a further supply of hot water to wash the dishes, started for the cook car to get it, the train being then in motion. Between the dining car and the cook car there was an uncovered space, and in attempting to step over this space, the plaintiff slipped and fell between the cars, and his right foot was run over and crushed by the wheel of the cook car. The boy through his father sought damages from both the railway company and the contractors, alleging that his injuries were due to the negligence of one or both these parties.

The case was first tried before a judge and jury, who found that there had been negligence (a) in so far as giving orders to employees not to pass between cars whilst in motion knowing full well that such instructions could not be adhered to by their employees in the performance of their duty; (b) in not seeing that vertical grab-irons were fixed on the end of the box-car in question, on each side of the door; (c) in failing to provide a step on the end of the cook car on a level with the floor of the car. The jury found further that no contributory negligence had been shown by the plaintiff, and awarded \$11,617 in damages.

On appeal being taken the Court of Appeal sustained the jury's finding and dismissed the appeal. One of the appeal judges, in his judgment, said:—

"Where a railway company is under an obligation to furnish cars reasonably safe for persons whose duty requires them to pass from one car to another while the train is in motion, the company, in my opinion, cannot escape liability to a person injured while so performing his duty, by reason of the failure of the company to supply proper cars, simply by establishing that the person injured was well aware of the danger to be incurred crossing the opening between the cars.

"The railway company, in my opinion, failed to perform its duty to supply cars reasonably safe for those whom it was contemplated would be obliged in the performance of their duty to pass from one car to the other while the train was in motion. As a result of that failure, the plaintiff was injured. Under these circumstances I do not see how the company can escape liability."

The plaintiff had signed an agreement with the contractors releasing them, in case of loss or injury sustained while in their employment, from all claim for damages, except such compensation as he would be entitled to on account of personal injury or death, which however was in no case to exceed \$1,500. The trial judge held that this agreement had no binding force as the employee was a minor. The appeal court, while holding that "all contracts made by infants are not void," pointed out, in regard to the voluntary limitation of damages, that "the plaintiff might be permanently disabled to such an extent that he could never earn a dollar, and still all he could recover would be the sum of \$1,500, and even to recover that amount he would, in all probability, have first to resort to the courts and engage in expensive litigation. This provision appears so unfair and so unreasonable that the contract, viewed as a whole, even although under it the infant secured employment—cannot be considered for his benefit. He is therefore not bound by it."

Some of the conclusions established by the decision in this case are as follows:—

Where a risk to an employee has been created or enhanced by the negligence of his employer, his mere continuance in service with knowledge of the risk does not bar him, if he suffer from such negligence, from recovering damages therefor.

A railway company owes to persons coming on its premises as a matter of right in the course of their business the same duty as that owed by the occupier of private premises to a person invited, namely, a duty to take reasonable care that the premises are reasonably safe for persons using them in the ordinary manner and with reasonable care.

Where a contract made by a railway company requires it to supply cars which the other party is to equip and use for the purpose of providing the railway's employees with meals, and requires the railway to transport the cars from place to place and the other party to provide the food and prepare the meals, the railway is under a duty towards the other

party's employees to provide cars which are reasonably safe for the performance of their work in carrying out the contract, and cannot escape liability for neglect of such duty merely by establishing that the employee injured as a result thereof was aware of the danger he incurred therefrom.

The question whether a contract of employment made with an infant is binding on him depends on whether the contract, taken as a whole, is for his advantage.

(Saskatchewan—Miller versus Smith and Company and the Canadian Pacific Railway Company)

Workmen under Government Contract may recover "Current Wages"

The last issue of the LABOUR GAZETTE contained a reference to the judgment in appeal in the case of *Jacques versus Archambault*, which found that a workman employed under a provincial government contract has a right of action against his employer for the difference, if any, between the wages he actually received, and the amount he would have received had his rate of pay been in conformity with the "current wages" clause in the employer's contract with the government. The plaintiff in this case was employed as a carpenter in the work of repairing and building an extension to the old jail at Montreal, which work was undertaken by his employer under a contract with the government of the Province of Quebec, containing among its general conditions the following provision: "The contractor agrees and consents, during the continuance of this work, to pay to the workmen the current rate of wages in the locality, such as is paid to competent workmen in accordance with what is called the "Current Wages Clause."

The rate of wages for carpenters then current in the locality was alleged by the claimant to be 67½ cents an hour. He claimed that having been employed for 1,240 hours he was entitled to receive \$836, whereas he had only received \$558, or at the rate of about 45 cents an hour. The Superior Court at Montreal which tried the case found that there was no such difference as was alleged, as during the time the work was in progress there were many workmen who would have been glad to accept 45 cents an hour. Therefore as the employer could have obtained all the carpenters he wanted at the lower rate had the claimant not chosen to accept work on those terms, it was evident that the employer had acted in good faith in paying a wage which was supposed to be the current rate of wages, since important contractors were paying it

and workmen accepted it. The judgment further held that the claimant must have known that the defendant had contracted with the government for the payment of fair wages, and that it was more properly the business of the claimant to go in search of information as to the amount of wages that were current, than to wait for the defendant to apprise him of it. By his silence at the time of accepting payment, the plaintiff was presumed to have agreed to the rate of wages he received, and to be without the right of recovery subsequently under the Fair Wage Clause.

The Court of King's Bench, in appeal, sustained the judgment of the lower court as to the facts of the case, but found that there was error in the reasons given for this judgment "in so far as it holds or implies that the appellant would have no right of action against the respondent for the difference, if there were any, between what he actually received from the appellant as wages while he was employed in carrying out appellant's contract with the Provincial Government and what he would have received had his rate of pay been in conformity with the said Current Wages Clause contained in the said contract."

(Quebec—Jacques versus Archambault)

Employer not liable for unauthorized Action of Employee

A letter alleged to be libellous was written to a certain party by a clerk employed by an incorporated mercantile company. Action having been brought against the company and also against the clerk, the court dismissed the action as against the company on the ground that the clerk, in writing the letter complained of was not acting within the scope of his employment or of his express or implied authority. He was a pricing clerk, employed at a weekly salary, and was required to consult his superiors in reference to changes in prices, having no authority in regard to office management or correspondence. The company had given no authority to the clerk to write the letter in question, and was not aware of its existence for several days after it was written.

(Ontario—Robertson versus Boddington and Robinson)

Commuting Compensation Payments for Permanent Disability

Some account was given in the last issue of the LABOUR GAZETTE (page 645) of a case respecting the commutation of the benefits payable under schedule 1, section 14, of the Alberta Workmen's Compensation Act of

1908 (Revised Statutes of Alberta, 1922, chapter 176) which reads as follows:—

"Where any weekly payment has been continued for not less than six months the liability therefor may, on application by or on behalf of the employer, be redeemed by the payment of a lump sum of such an amount as the court shall deem just, and such lump sum may be ordered by the court to be invested or otherwise applied for the benefit of the person entitled thereto: provided that nothing in this paragraph shall be construed as preventing agreements being made for the redemption of a weekly payment by a lump sum."

In this case the Canadian Pacific Railway Company made application to redeem weekly payments of \$10 each, adjudged upwards of six months previously, to be paid to Jennings, an injured employee. The questions involved in this case were stated by the court as follows:—

"The authorities seem to establish that the first enquiry should be to ascertain whether or not Jennings' incapacity is permanent. The physical condition of Jennings is doubtless permanent, one leg having been amputated following injury, but his present incapacity for work may not be permanent. The great difficulty is as to the meaning of the word 'permanent.' In reviewing a weekly payment under clause 16 the arbitrator must deal only with existing facts, and must not prophesy or speculate as to the workman's future condition. But in redeeming under clause 17 he is bound to speculate. He must not rest content with finding that the weekly payment which has been continued for six months is at the moment the proper sum. He must start with the assumption that the existing weekly payment is proper; but he must go further, and ascertain as best he can whether that payment is likely to be proper during the rest of the man's life. Is his condition stable; or is there a probability that he will get better or worse? If his condition is stable, the incapacity is 'permanent' within the meaning of the clause. Put in other words, the phrase 'incapacity is permanent' means 'not that the physical injury is permanent, but that in all reasonable probability the weekly payments to which the man is entitled will never alter.' Commutation based upon the actuarial value of the weekly payments, less a deduction in respect of the contingency of his dying at an earlier age than the average of human life contemplated in the actuarial value, was confirmed by the Court of Appeal.

"Perhaps it would not be very wrong," the judgment continued "to say that the award to Jennings was the maximum under the Act and was of course less than the amount he had

previously been earning, and to that or some extent may be regarded as recognizing his ability to supplement the award by some earning capacity. If so a further reduction in the amount now to any great extent would be unjust as his right to demand and receive the amount awarded is absolute. For the full period of 38.81 years the sum required to produce \$10 per week on a basis of investment at 4 per cent is \$9,897.22; at 4½ per cent is \$9,479.60; at 5½ per cent is \$8,283.60. The evidence established that Jennings has been in fact unable to secure and retain employment as a common labourer because he is physically unfit and unable to perform common labour, at least to do so satisfactorily. This to some extent was probably due to the fact that during the past several months there has doubtless been a surplus of that class of labour."

The court allowed payment of a lump sum of \$5,000, of which \$2,000 was to be paid at once, and the balance invested for the employee in custody of the court.

Labour Union Asks for Counter-Injunction

The Amalgamated Clothing Workers of America in the Supreme Court at New York, on July 24, retaliated against the International Tailoring Company of Chicago, which sought an injunction to restrain members of the Union from picketing and causing alleged interference with the company's business by asking for a counter-injunction to prevent the tailoring company from carrying out an alleged conspiracy to wreck the union. The plant of the International Company in New York had been picketed since the end of June, when the Amalgamated workers struck because the Chicago International Tailoring Company broke with the union. It was alleged by the union in its counter-petition that the Chicago company broke off relations with the Amalgamated in June during the dull season, when it would be most advantageous to them, and do most harm to the union, and "conducted sham negotiations for the renewal of the agreement with the defendant until its plans and purposes were ripe for consummation." The Amalgamated, in addition to asking an injunction on the ground that the plaintiff is conducting a common law conspiracy to ruin the union by causing members to desert, blacklisting them, and causing them to be arrested on false charges, asked for \$250,000 damages for the loss alleged to have been sustained by the actions of the company.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 25]

SEPTEMBER, 1925

[NUMBER 9

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

EMPLOYMENT throughout Canada during the month of July was at a somewhat higher level than in the previous month. Reports from the Employment Service of Canada showed a slight increase in the volume of business transacted during the month, as compared with the records of June, 1925, and July, 1924. At the beginning of August the percentage of unemployment among members of trade unions reporting was 5.2, as compared with percentages of 6.1 in the previous month, and 5.4 in July, 1924. The number of local unions from which reports were tabulated was 1,531, with an aggregate membership of 156,133 persons. Reports from 5,855 firms showed that they were employing 791,227 persons on August 1, as compared with 797,463 in the preceding month, and with 775,759 on August 1, 1924. Agriculture, however, which is not covered by these reports, absorbed many persons usually employed in other industries. The apparent decline was also partly due to summer stock-taking.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.84 at the beginning of August as compared with \$10.49 for July; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.92 for June, 1920 (the peak); \$16.42 for August, 1920; \$13.41 for August, 1918; and \$7.68 for August, 1914. In the wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 advanced to 159.5 for August as compared with 158.4 for July; 156.8 for August, 1924; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; and 202.8 for August, 1918.

The time loss caused by industrial disputes was less in August than in the previous month, or in August last year. Seventeen disputes were in progress at some time during the month, involving 13,003 employees and resulting in a time loss of 102,316 working days. Corresponding figures for July were as follows: 16 disputes involving 12,882 workpeople, and

320,433 working days; and for August, 1924; sixteen disputes, 9,472 employees and 206,118 working days.

Combines Investigation Act, 1923

Mr. F. A. McGregor, for many years Private Secretary to the Right Honourable W. L. Mackenzie King, has been appointed Registrar of the Combines Investigation Act, and commenced his new duties on September 8. Mr. McGregor succeeds Mr. Harry Hereford, who, in addition to his duties as Industrial Engineer in the Department of Labour, has very acceptably performed the duties of Registrar since the enactment of the Combines Investigation Act in 1923.

Age limit for child immigrants to Canada

The Dominion Department of Immigration and Colonization has given effect to one of the recommendations made by the delegation of the British Overseas Settlement Committee, headed by Miss Margaret Bondfield, which visited Canada last year on the invitation of the Dominion Government to study conditions in this country in regard to the emigration of children from the United Kingdom. The report of the delegation was outlined in this GAZETTE in its issue for last February. In regard to the age of child immigrants the Committee recommended that a limit should be placed on the admission of children of tender age who are unaccompanied by their parents, and that the general principle should be followed that children sent to Canada for working purposes should not emigrate from Great Britain until they have arrived at a working age. This suggestion was subsequently approved by the Committee on Immigration and Colonization of the Social Service Council of Canada, who declared in a report published last January that "as the demand in Canada is for children to work on farms or in households, only boys and girls of post-school age should be brought to Canada by immigration agencies."

The Department of Immigration, having these recommendations in view, made a regulation in the early months of this year, to

continue in effect tentatively for a period of three years, limiting the admission of children who are unaccompanied by their parents or natural guardians, to those who are over the age of 14 years. Protests against this regulation have since appeared in the press, stating that it will bring to an end the useful work carried out in the past by Dr. Barnardo's Boys' Homes and some other well-known agencies. In view of these protests the following extracts from the report of the "Bondfield Commission" may be of interest:—

In the first place the comparative helplessness of the child makes this form of migration the most liable to abuse. There is the possibility of the loss of certain educational advantages. There is the danger of overworking. There is the further drawback that the placing of children under fourteen has in the case of one Society resulted in an arrangement by which persons who have taken such children are allowed to employ them, without paying them any wages, till they reach the age of eighteen. The intention of course is to reimburse the employers for the expenditure incurred on the children over and above the value of their work. This practice appears to us to be unsatisfactory and is undoubtedly so regarded by the children themselves.

It is clear that public opinion in Canada would condemn a system under which a certain number of Canadian householders were provided with unpaid help of this nature. Moreover, from certain points of view the objections to this arrangement appear to us to be greater now that the cost of taking the children to the Dominion is borne partly by the British and partly by the Canadian taxpayers.

It may be said that the foregoing objections to the migration of children of tender years do not apply in the case of those children who are boarded out by Dr. Barnardo's Homes for a cash payment. This is true only to a limited extent. We visited certain homes where children for whom a boarding fee was being paid were well-cared for in every way and were not called upon to perform any actual service. In other instances, however, such children had all their spare time fully taken up with miscellaneous duties about the house or farm. Taking the system at its best, boarded-out children transferred from homes in the United Kingdom to homes in Canada do not seem to us to have gained any appreciable advantage. The only justification for the system would be that the children grow up accustomed to Canadian conditions and when of working age fit more easily into the social and economic life of the community. Our observations, however, have satisfied us that the older children, if properly placed, readily adapt themselves to their new environment.

"After careful consideration of the whole question, we have come to the conclusion that the best age at which children should go to Canada is the statutory school-leaving age in the United Kingdom.

The Dominion Government has appointed the week commencing October 4 to be observed throughout Canada as "Fire Prevention Week." It is recommended that fire drills be held for the children in all schools, for the inmates of all institutions, and for the employees in all large stores and factories, in order that a greater degree of safety may be ensured by acquainting the occupants with the most ex-

peditious means of exit. All dwellings, public buildings, stores, warehouses and factories should be inspected and cleared of rubbish in order to reduce the hazard of fire. Special instructions on fire prevention is strongly urged, and prominence should be given to all legislation and regulations of the Dominion, provincial and municipal authorities dealing with fire prevention. It is pointed out that reliable statistics show that 80 per cent of fires originate either directly or indirectly through inexcusable ignorance or neglect. The annual loss incurred thereby is estimated at about 350 human lives and \$45,000,000 in insurable property.

Co-operation plan on Canadian National System

The co-operation plan of management which was adopted last February at the Canadian National motive power shops and carshops at Moncton, New Brunswick* has since been put into effect at several other railway division points of the system. Joint committees were established in the motive power shops at Stratford, Ontario, on June 16; in the carshops at London, Ontario, on June 17; in the motive power shops and car shops at Transcona, Winnipeg, on August 12; and in the motive power shops and car shops at Fort Rouge, Winnipeg, on August 13. At all these points the employees are reported to be taking keen interest in the workings of the committees. The motive power and car shops at Leaside, Toronto, and at St. Malo, Quebec, have also been visited and shop committees set up. The arrangements for a joint committee of management and employees in the Moncton shops were at first tentative in character, but the experiment proved so successful from the standpoint of the Railways and also from that of the employees that the plan is now recognized by both parties as the best method of shop management. The committees promote closer co-operation between the company and its employees in regard to welfare, shop methods, and other matters, not however including wage rates.

The joint management plan was approved by the Railway Employees' Department of the American Federation of Labour at last year's annual convention, and also by system federation of the Canadian National Railways at the same date. The Baltimore and Ohio plan, on which the Canadian National Railway co-operation plan was modelled, though in a somewhat modified form, was described in the LABOUR GAZETTE for May, 1924.

* LABOUR GAZETTE, March 1925; December, 1924.

Summing up the results of the new system in the Glenwood shops, William H. Johnston, president of the International Association of Machinists, said after an experience of less than a year that "the effect of the new policy of co-operation is clearly manifesting itself in the splendid service the road (Baltimore and Ohio) is rendering the public, the high economy with which it is being operated, and the excellent *morale* which prevails throughout the rank and file."

Joint management and unemployment

President B. M. Jewell, of the Railway Employees' Department of the American Federation of Labour, writes in the *American Federationist* on the benefits resulting from joint management in railway shops. In regard to regularity of employment remarkable results have already been obtained. "In years past," he says, "managements of railroads have divided their workers into two general groups: (a) Those who operate their trains, whom they regard as producers of revenue—essential employees, (b) Those who constructed, maintained and repaired the railroad and its equipment, whom they regarded as consumers of revenue—necessary evils." He claims that railway managements formerly made a practice of wholesale "lay-offs" when business fell below a certain pre-determined volume, having no regard to the need for construction or repair to equipment, etc. "The number of employees on the payroll has been increased one-half or one-third and reduced again by the same amount; time and again it costs from fifty dollars to three hundred dollars to bring a new employee into the industry; labour turnover of 200 per cent is not unheard of; and yet with all these startling facts widely known, little or no progress, until within the last couple of years, has been made in eliminating irregularity of employment."

When the unions took a hand in management in the Glenwood shops of the Baltimore and Ohio Railroad at Pittsburgh, Pennsylvania, their first concern was to eliminate irregular employment. The results are stated by Mr. Jewell as follows:—

"As an indication, and only an indication, of what has been accomplished along this line, during the year 1924, there was paid to Baltimore and Ohio shop craft employees, in wages approximately \$350,000 for work that ordinarily would have been performed by employees in outside contract shops, while at the same time, or during that same year, the Baltimore and Ohio shopmen would have been laid off in reductions in force, or, stating this another way, there was performed during the year 1924 in the Baltimore and Ohio shops, work costing a total of \$1,500,000 that ordinarily would have been contracted out to other industries. Consistent with reasonable business conditions, there

will be paid to Baltimore and Ohio shop craft employees in wages, during the year 1925, for work that ordinarily would be given to other than railroad employees, approximately \$2,750,000, or, in other words, in the joint effort to stabilize employment on the Baltimore and Ohio Railroad in two years, it has been possible to find a way whereby approximately one month's additional work can be secured for the entire shop forces of approximately twenty thousand employees."

Employment Service and municipal unemployment relief

throughout the Dominion between the local employment office and the municipal authorities engaged in relieving the unemployed. The relief officer, he says, has come to recognize, and to take advantage of, the assistance of the public employment service in dealing with the frequently recurring problems in unemployment. The practice followed, for instance, in the Toronto office, is to require the applicant for relief to register at the office of the Employment Service where, if no work is available, he is given a card bearing his name and the statement that "we have no work for the bearer who states he is in need of relief." The card is carefully worded to throw the responsibility for the investigation of the man's circumstances upon the municipal authorities who, after all, have to bear the cost of whatever relief may be granted. At the same time, the certificate from the Employment Service provides evidence that the applicant is a *bona fide* seeker after work, and that no employment is available for him. Imposition on different relief funds is reduced to the absolute minimum by this procedure, as the applicant's card may be taken from him by the Employment Office staff if he refuses employment for which they believe him to be qualified to accept. Needless to say, cards are not taken from applicants until the case has been thoroughly investigated and unmistakable evidence submitted to show that an attempt is being made to impose upon the relief funds.

Safety provisions for trains running reversely

The recent legal decisions outlined elsewhere in this issue include a case of a similar nature to the case of *Ouellette versus the Canadian Pacific Railway Company*, on which the Judicial Committee of the Privy Council rendered a decision that was given in the April issue of this Gazette. In the earlier case two children were killed at Hull, Quebec, by a "train" consisting of two

An article contributed to *Social Welfare* by the superintendent of the Ontario offices of the Employment Service notes that a close relationship has developed at various centres

engines running together backwards across a highway. The company contended that two engines running together did not constitute a "train" in the sense intended by section 310 of the Railway Act which provides:

"310: (1) Whenever in any city, town or village, any train not headed by an engine is passing over or along a highway at rail level which is not adequately protected by gates or otherwise, the company shall station on that part of the train, which is then foremost, a person who shall warn persons standing on, or crossing, or about to cross the track of such railway."

The Privy Council held that the expression "train" need not necessarily include cars, and that the protection given to the public by this section of the act was not meant by Parliament to be impaired by the fact that no cars were drawn. They decided therefore that the company should have stationed a man on the tender of the engine. This decision attracted some attention at the time as it affected existing railway practice.

The second case concerned a fatality in which a workman was killed by a train running reversely, not however on a highway but within the railway yards. The Superior Court at Montreal found that the section of the Railway Act above quoted clearly indicated that the precautions referred to were not deemed to be an absolute necessity in the railway yards; and that although "the omission to station a man on the rear end of a train moving reversely across a public highway may constitute under the common law an act of negligence under certain circumstances, although the Railway Act limits this precaution to reversed trains crossing a public highway, still it cannot be said that it must be done in all circumstances and in all places."

Further damages were obtained more recently from the same company in connection with the same accident with which the Privy Council's decision was concerned, the Superior Court at Hull awarding \$2,388 to a man who had been injured in the automobile with the children when they were killed.

Hours of part-time instruction

The Toronto Board of Education is suggesting to the Minister of Education of Ontario that the Adolescent School Attendance Act should be amended in the section which requires that the part-time instruction of pupils between the ages of 14 and 16 years shall be given between the hours of 8 a.m. and 5 p.m. (The provisions of the act providing for the part-time instruction of boys and girls between 16 and 18 years of age, which took effect on September 1, were outlined in the last issue

of this GAZETTE). In regard to the younger children, the act provides as follows:—

4. (1) Where, in the opinion of the school attendance officer, the services of an adolescent between fourteen and sixteen years of age are required in any permitted occupation in or about the home of his parent or guardian, he may be granted by an attendance officer, on the written application of his parent or guardian, a home permit to engage in such services.

(2) Where, in the opinion of the school attendance officer, the services of an adolescent between fourteen and sixteen years of age are required in some permitted gainful occupation for the necessary maintenance of such adolescent or some person dependent upon him, he may be granted by an attendance officer, on the written application of his parent or guardian, an employment certificate to engage in such services.

5. No adolescent between fourteen and sixteen years of age shall be employed by any person during the hours from 8 a.m. to 5 p.m., unless he holds a home permit, or an employment certificate as provided for in section 4 of this act.

6. Every adolescent between fourteen and sixteen years of age who holds either a home permit or an employment certificate, shall attend part-time courses of instruction, approved by the Minister, for an aggregate of at least 400 hours each year, distributed as regards times and seasons as may best suit the circumstances of each locality, when such part-time courses of instruction are established in the municipality in which he is employed.

The Provincial Department is seeking the co-operation of employers in securing the attendance of the children at the part-time class. It has been found that many boys now seeking permits have had employment during the holidays and are unwilling to give up their work to attend school. For this reason it is suggested that the required instruction might be given after working hours.

Sanitary conditions in lumber camps

The new regulations for the sanitary control of lumber, mining and other camps in Manitoba which are outlined on another page of this issue are similar to regulations that have been in force in Ontario for some time. Mr. W. C. Millar, the sanitary inspector of Ontario, stated at the 12th annual convention of the Sanitary Association of Canada, held at Winnipeg in August, that the enforcement of the Ontario regulations had reduced diseases in camps to a minimum. He further pointed out that good sanitary conditions constitute a valuable asset to the operating companies. For some time past, he said, when companies operating near the western boundary of Ontario wished to elude the regulations, they had only to build their camps in Manitoba. This practice will cease with the enforcement of the new regulations. The requirements of the "standard camps" secure good conditions for the employees in regard to general sanitation, hospitals and medical attention. The camps must be well aired and lighted, with

single double-deck bunks, and the men coming to work are to be provided with mattresses and clean blankets. Health regulations for camps in New Brunswick were issued in September, 1924, making provision as to ventilation, air space, sanitation, etc., and enabling the minister responsible for the administration of the Health Act to require the owners to provide medical attendance for their employees, with first aid equipment and temporary hospitals. Similar requirements in the Province of Quebec were outlined in the *LABOUR GAZETTE*, May, 1924.

Limit of safety regulations

Mr. E. H. Frazer, Senior Inspector of Mines in Scotland, stated in a recent address that many people are of the opinion that the making of rules and regulations can be overdone. "It would appear," he said, "that further safeguards introduced by means of Parliamentary Acts or Departmental Orders are not generally desired by the majority of workers and employees, when the object can be attained without compulsion." Of existing mine regulations he says: "There are already, they think, quite enough of them to be carried in mind and to be observed. It is, no doubt, irksome to be hedged in at every turn by restrictions, but undoubtedly regulations serve a useful purpose. Practically all mining legislation is founded on what has been learned by previous experience. The various acts and regulations have never yet been ahead of the best mining practice. Nevertheless, there is the danger in applying a strict rule to a number of differing conditions that many people may be compelled to do some quite unnecessary thing in order to ensure that it shall be done in the cases where it is necessary. It is also a manifest impossibility to legislate for every conceivable little happening in the life of a worker. A method of procedure which would be quite correct in one set of circumstances might be fatal when applied to dissimilar conditions."

Mr. Frazer believes that the safety of working places in mines is largely in the hands of the mine officials and the workmen themselves, and if all work together to avoid accidents, good results will follow, whatever may be the laws or regulations. The *Canadian Mining Journal*, which reprints Mr. Frazer's address, recalls that members of the Ontario Mining Convention at their recent convention were also of the opinion that further improvement in the accident rate must come from within the industry itself.

Unemployment in 1924 and 1925

The August issue of the *International Labour Review* (Geneva) contains a survey of the unemployment situation in Great Britain and the British Dominions, and in other European countries and the United States, in 1924 and the beginning of 1925. A few great industrial countries such as France and Italy suffered little unemployment during this period. Similarly, the United States escaped serious trouble, as a result, it is suggested, of the double policy of credit control and immigration control. In other countries unemployment decreased considerably, as in Czechoslovakia, Germany, Switzerland, and to a less degree in Denmark, the Netherlands, Norway, Sweden and South Africa. In Great Britain, on the other hand, after a certain improvement early in 1924 there was an alarming increase at the beginning of 1925. In Australia and Canada also, unemployment increased in 1924; while even in India employment has become a problem for the middle-class workers among the Anglo-Indians. Japan is now apparently suffering more severely than at any previous time. In Belgium, where unemployment had practically disappeared in 1923, there was a fresh outbreak during the last months of 1924. In Poland there has been a marked increase and in Australia and Hungary unemployment has reached overwhelming proportions.

The survey concludes as follows: "There is no panacea for unemployment. Its origins are many and it can be effectively checked only by a variety of methods. One of these, however, is stabilization of the price level, a proposal which may reasonably be expected to enter the realm of practical politics. A further object would seem to be the progressive elimination of the difficulties of international trade, a process which would unquestionably lead to a higher general level of employment and the consequent avoidance of much individual privation and distress. The prevention of unemployment demands, in brief, a policy of international co-operation to secure better organization of production and exchange, such a policy involving, as a primary step, that of securing stability in the value of all media of exchange."

"Employability" and unemployment

The British Ministry of Labour has published a report upon an inquiry made last December into the personal circumstances and industrial history of about 11,000 claimants to unemployment benefit, selected so as to constitute a representative sample of the whole

body of claimants. The claimants were divided into four categories of "employability" as follows: A. Those who in normal times would be in steady employment; B. Those who in normal times would obtain a fair amount of employment; C. Those who in normal times would obtain partial employment; D. Those verging on the unemployable.

The analysis of the schedules shows that, in the opinion of interviewing officers, 62.7 per cent of all the males interviewed, and 77.2 per cent of all the females, were persons who in normal times would usually be in steady employment; while only 3.6 per cent of the males and 14 per cent of the females were regarded as "verging on the unemployable." Categories A and B taken together (persons who in normal times would be either steadily or at least fairly well employed), account for 86.1 per cent of the males and 90.2 per cent of the females. It is found, in comparing the proportions for males and females, that the latter are in general much younger than male claimants.

The analysis shows that the number of those men and women who were considered to be "verging on the unemployable" is in great part made up of elderly or aged persons. Over two-thirds of the men placed in this category, and nearly one-half of the women, were aged 60 years and over. It will also be remarked that a heavy proportion of those classed as "verging on the unemployable" suffered from poor physique, poor health, or some manifest physical defect. The men and women in Category D are not "unemployable," but "verging on the unemployable." If they were unemployable they would be precluded by the provisions of the Act from receiving benefit.

Wages and hours in anthracite mines

The United States Bureau of Labour Statistics recently published the results of a study of wage rates, hours, earnings and working conditions of the mine workers in the anthracite coal industry in Pennsylvania in 1922 and 1924. Data covering the wage rates, hours, and earnings of each employee, in each occupation for a representative half-month pay period were secured directly from companies. Nearly all of these data are as of the second half of October or the first half of November. Data were also obtained from reports of the United States Geological Survey and from other sources. The 1924 data cover 34,117 underground or "inside" men and 10,383 surface or "outside" men, a total of 44,500 wage

earners in 56 collieries, or 28 per cent of the 157,743 mine workers reported in the anthracite industry in 1923 by the United States Geological Survey.

A table is given showing the average number of starts and average hours and earnings by occupations in the two years. In this table it is seen that in the half month for which data are presented, the 11,778 contract miners covered in 1924 worked an average of 10.8 starts, that is, on 10.8 calendar days; that they were at the face or seam of coal an average of 68.5 hours, excluding time for lunch, and at the face 73.9 hours, including time for lunch; that they were in the colliery an average of 81.4 hours, including time for lunch and time of travel from shaft to the face and return. Their average hours per start were 6.3 based on time at face, excluding time for lunch, 6.8 based on time at face, including time for lunch, and 7.5 based on total time in colliery. They earned an average of \$1.432 per hour based on time at the face, including time for lunch, and \$1.204 based on total time in mine. Their earnings averaged \$9.07 per start, and \$98.07 for the half month.

Minimum wage in British coal industry

The last issue of the LABOUR GAZETTE contained an article on the recent crisis in the coal mining industry in Great Britain, which terminated with an undertaking by the government to grant a subvention in aid of wages for the nine months from August to May. This step was taken following the report of a court of inquiry under the Industrial Court Act, which recommended the acceptance of the principle of a minimum wage. It may be noted that a minimum wage rate is provided by the Coal Mines (Minimum Wage) Act of 1912 for certain classes of workers, but as this act applies only to a limited number of underground employees it was not considered to afford a suitable basis for the general regulation of miners' wages. The Court of Inquiry said in their report: —

"We are satisfied on one point, that the workers are justified in claiming that any wages agreement which they can be asked to accept should provide for a minimum wage. What that minimum should be is a matter for negotiation between the parties. We do not think that a method of fixing wages which allows of their indefinite diminution can be regarded as satisfactory. It may be said that when under such a system the wages fall too low the worker can decline to continue to give his labour, but the absence of any basis of security is the feature which renders unaccept-

able a scheme which provides for unlimited variations downwards, subject only to the mitigation by unspecified subsistence allowances, with the result that until the minimum subsistence allowance level is reached for every worker in each district the process of diminishing wages could continue to proceed. The claim that wages must be a first charge on the proceeds of industry is a contentious and ambiguous one. If the meaning be that wages at some agreed minimum rate must in practice be a charge before profits are taken we concur in that view."

The court suggested that the employers might improve the efficiency of the industry. Further collective action on the part of collieries, for example, would enable facilities and resources to be used in common to greater advantage and would promote economical working. It was also for consideration whether the industry should remain in isolation, or whether by its co-ordination with other enterprises better results might not be obtained. The increased cost of the transport and shipment of coal was another factor meriting investigation. The improvement of the distribution of coal, while not entering directly into the situation, had an important indirect bearing upon it, for it would result in lowering the price to all classes of consumers and might have a considerable effect in stimulating demand. The question of the continuance of the royalty system on its present basis was also an important one, although the charge upon the industry under this head is unimportant relatively to the wages bill. The Court found that the royalty system "has been the source of much ill feeling among the ranks of the workers, where the promotion of goodwill is of so much importance."

International inquiry into coal mining industry

In view of the unrest in the coal mining industry throughout the world the International Labour Conference, at its seventh session, adopted a suggestion that had been made by the International Miners' Federation for a general inquiry into the industry and the problems with which it is faced in the various coal-producing countries. The Federation's executive had decided last April to open such an inquiry, and sought the co-operation of the International Labour Office in order that the efficient machinery at the disposal of the Labour Organization might be utilized. The International Labour Conference accordingly requested the Governing Body of the Organization to "consider the conditions under which this investigation could be initiated and carried out by the Inter-

national Labour Office." In view of this decision, a brief statistical survey of the present coal situation has already been made by the Office at Geneva, with an introductory note which accepts the conclusion of the British Court of Inquiry that the world's consumption of coal has declined, perhaps permanently, in consequence of the late war, and that the resulting condition of over-production has been the cause of unemployment and reduction of wages. "It is not surprising therefore," the note concludes, "that the miners, through their international as well as their national organizations, have sought to arouse public interest in the plight of their industry."

It may be noted that the International Miners' Federation has since declared that the primary remedy for the present situation is an international regulation of production which can only be achieved by the nationalization of mines.

Family wage proposals in British mining industry

The principle of family subsistence allowances was introduced for the first time in the history of coal mining in Great Britain in proposals recently made by the coal owners in South Wales to govern employment after August 1. The *Economist* (London) describing this new feature in its issue of July 25 says that the allowances are graded not only in accordance with the size of the family, but also in accordance with the standard basis rates of the various grades of labour employed, and are thus intended to discriminate between single and married adults, and to remove, the anomalies created by the present individual subsistence wage. There is an allowance of 1s. 3d. per shift for the wife of a low-grade day worker engaged at the minimum standard rate of 5s. per shift, but none to a higher-grade worker with a standard rate of 6s. 10½d. per shift. Between these two extremes the wife allowance falls as the standard rate increases. In addition to the wife allowance, there is another of 5d. for first child, 4d. for the second, 3d. for the third, and 2d. for the fourth. A low-grade workman with a wife and two children is thus guaranteed a subsistence wage per shift of 7s., and a higher-grade workman with a standard rate of 6s. 10½d. and with a wife and two children a subsistence wage of 7s. 7½d. per shift. These allowances are to be met out of the 87 per cent of the proceeds of the industry allotted to wages after the deduction from the total proceeds of costs other than wages. If the divisible balance of the industry is large enough to pay wages above the subsistence rates, then the day-wage

worker will share equally with other grades of labour in the percentage payable on standard rates. The scheme, however, involves a reduction below the present individual subsistence wage of 8s. per shift, and the offer of the South Wales coal owners has excited no enthusiasm.

The *Economist* points out further that "in France, Belgium, and other Continental countries the family wage has made considerable progress in recent years. In France to-day the system applies to nearly 10,000 undertakings employing over a million workmen, and involving an expenditure in allowances for children of between 130 and 140 million francs per annum. In Belgium it has been adopted by firms employing in all about 280,000 men, of whom 160,000 are in the coal industry. The practice on the Continent is to make monthly allowances in respect of the children of the workmen. In Belgium these monthly allowances range from 10 francs for one child to 100 francs for four children, and in France from about 16 francs for one child to 124 francs for four children."

Joint action by Britain and U.S.A. on mine safety

The Safety in Mines Research Board, a branch of the Mines Department of Great Britain, refer in their report for 1924 to the advance already made in co-ordinating the mine safety work of the Board with that of the United States Bureau of Mines. Conferences have already been held and arrangements made for distributing a number of researches between the two national bodies, independent investigations continuing on certain subjects on which joint action is not so necessary. Interchanges of staffs are also provided for, as well as the mutual exchange of ideas and the communication of results by correspondence between individual investigators employed on similar problems in the two countries. Joint reports will be published of all investigations in which there has been collaboration. Tests of British and American safety explosives have taken place in America, and the investigation has led to discussions between the representatives of the two countries of the factors, other than the explosives themselves, which may indirectly account for the reported greater frequency of gas ignitions in Great Britain, which may prove to be due mainly to differences in the nature of the coal seams and consequent differences in the methods of working the coal.

The Robert Simpson Company, of Toronto, has recently carried to a further stage the

programme started in 1919 for giving employees a share in the profits of the business. No employee may deposit more than 5 per cent of his or her wages, and in order that those in senior positions may not benefit unduly, no employee may deposit more than \$2 weekly. The company contributes annually 5 per cent of net earnings after payment of depreciation and interest. A stock ownership plan has recently been put into effect whereby the officials and executives are given a more active participation in the company's affairs.

Miss Margaret Bondfield, Under-Secretary of Labour in the late labour government of Great Britain, has been re-appointed by the present government a member of the Overseas Settlement Committee. Miss Bondfield visited Canada last year, being then *ex-officio* the chairman of the Committee.

The civilian employees of the Federal Government of the United States numbered 556,095 at the beginning of March this year as compared with 438,057 in June, 1916. The chief increases were in the staffs of the Treasury and Post Office Departments and the Veterans' Bureau.

The Old Age Pensions Association of Canada is making a special effort to arouse public interest throughout Canada in the subject of old age pensions. The secretary of the Association is Mr. James Stevenson, 167 Church street, Toronto. A Dominion-Provincial Conference on this subject to be held during the present parliamentary recess was recommended in the report of the Special Committee which was adopted by the House of Commons at its close of the last session. (LABOUR GAZETTE, July, 1925.)

The number of students offering themselves for training as school teachers in Saskatchewan is now in excess of the demand. On account of the large number seeking admission to the Normal School and the limited accommodation, letters of admission will, except in the case of university graduates, be granted only to *bona fide* residents of Saskatchewan, and no students will be admitted to the Normal School with incomplete academic standing. Graduates in arts or science of Canadian or other British Universities whose degrees are acceptable to the department will be permitted to qualify for interim first class and high school certificates by attending one of the first class sessions to be held early in 1926.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

EMPLOYMENT industries exclusive of agriculture showed a slight decline at the beginning of August; the reduction, however affected less than half as many workers as that indicated on August 1, 1924, when the index number was somewhat lower.

The employment situation at the end of August was reported by the superintendents of the Employment Service of Canada to be as follows:—

In the Province of Nova Scotia the crops which are generally good were providing employment for quite a few workers, in addition to those regularly employed in this industry. The fishing industry was active, and good catches were being reported. Coal mining was still expanding and was quickly recovering its position held prior to the prolonged industrial trouble. Manufacturing industries were steady, with better prospects reported in some branches, particularly in the iron and steel industries. Highway work and construction continued to be fair. Logging was quiet as the camps had not yet started to open up.

Good crops in New Brunswick were providing employment for large numbers of farm hands. The fishing industry was observed to be good. Preparations were under way for the opening of logging operations. Construction work of practically all kinds was reasonably active. Manufacturing, especially in the lumber industries, was brisk.

From the Province of Quebec conditions generally were reported as being better, and the prospects for the immediate future appeared hopeful. A brisk demand for farm hands absorbed a number of applicants for employment, while placements in the logging and lumbering industries did likewise. Manufacturing was fair with certain lines reporting considerable activity, among which was the textile industry. The building trades were reported as active. Trade, reflecting the increased activity in other lines of business, was reported as improving.

From Ontario a continued general improvement was reported. Local farms absorbed substantial numbers of workers while the harvest excursions to Western Canada materially reduced the number of unemployed. In the southwestern section of the province manufacturing continued to record improvements. In the northern section general improvements over the preceding months were recorded. The mining industry remained busy, while highway work required the services of large numbers of workers. The opening up of the bush

camps for the winter season still further assisted in improving employment conditions in the northern section. Throughout the whole province the construction industry appeared to be normally active.

Heavy demands for farm workers in the Province of Manitoba served to substantially reduce the number of local unemployed, and in fact some districts reported shortage of workers of this class. While construction work was fair, work such as railroad and highway building, was seriously interfered with by labour preferring the harvest work at this particular season.

Very heavy demands for harvest workers were reported from all sections of Saskatchewan, with some localities experiencing shortages. As in Manitoba, outdoor work requiring the services of unskilled labour, was interfered with by men preferring the harvest work. From the Prince Albert district was reported a demand for bush workers to undertake the preparations for the season's work.

As in Manitoba and Saskatchewan, a heavy demand for harvest help featured the Alberta situation. Apart from surpluses of a local character, practically no unemployment appeared to exist owing to the farm demands. While some districts reported improved production in the coal mining industry, industrial trouble still hampered operations to some extent. Construction was reported as fair.

The exodus of harvest workers from the Province of British Columbia to the Prairie Provinces lessened unemployment in the former. While bush fires interfered to some extent with regular bush operations, fire fighting gave temporary work to quite considerable numbers of men. From districts not affected by the fires, demands for loggers were being received. Opportunities for employment in the mining industry appeared to be more frequent, though there were plenty of competent workers available. Building and construction were fairly brisk. Generally speaking, employment conditions in the Province of British Columbia seemed appreciably more satisfactory.

EMPLOYERS' REPORTS The firms making employment returns to the Dominion Bureau of Statistics recorded a slight reduction in payrolls

at the beginning of August. The loss was, however, very much smaller than that indicated on August 1, 1924, when the situation was less favourable than on the date under review. Contractions in employment on highway construction in the Maritime Provinces

and shutdowns for inventories and holidays in Ontario contributed largely to the decline.

Quebec, the Prairie Provinces and British Columbia registered improvement, while in the Maritime Provinces and Ontario there were decreases. In the Maritime Provinces, highway construction released a very large number of men, while manufacturing also reported reductions. In Quebec, there was expansion in transportation, construction textile and electric current plants, communication and trade, but losses that largely offset these gains took place in iron and steel works, logging camps and railway construction. In Ontario, automobile and other iron and steel works and railway construction laid off a considerable number of employees; logging camps also registered curtailment. On the other hand, manufacturing, apart from the above mentioned groups, showed improvement, and transportation, communication and mining were more active. In the Prairie Provinces, manufacturing, mining, trade, railway transportation and communication afforded more employment, while railway construction and local transportation reported decreases. In British Columbia, manufacturing, transportation, logging and trade showed improvement over the preceding month.

Three of the cities for which separate tabulations are made—Ottawa, Hamilton and Windsor—recorded reduced activity, while employment increased in Montreal, Quebec, Toronto, Winnipeg and Vancouver. In Montreal, manufacturing was slacker, largely owing to reductions in iron and steel. Electric current, textiles, rubber, construction, transportation, trade and communication employed a larger number of workers. In Quebec, there was very little change on the whole; shipping firms showed gains. In Toronto, transportation, leather and some other divisions registered heightened activity, but reductions that partly offset this improvement took place in textile and iron and steel plants. In Ottawa, pulp and paper mills laid off some employees, while construction was slightly more active. In Hamilton, iron and steel works recorded losses, and textile factories were also slacker. In Windsor, there were heavy declines in automobile works, owing to a shut down for inventory and holidays. In Winnipeg, manufacturing made moderate increases and substantial improvement was noted in trade. In Vancouver, manufacturing, transportation and trade registered the greatest gains, but construction was not quite as brisk.

An analysis of the returns by industries shows that there was a decline in manufacturing, largely on account of the reductions already mentioned in iron and steel works. On

the other hand, food, electric current, non-ferrous metal, lumber and rubber works were busier. Logging showed further seasonal decreases. Mining, communication, transportation, services and trade recorded increased activity, but highway and railway construction released employees.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of August, 1925.

TRADE UNION REPORTS.

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness or as a direct result of strikes or lockouts are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

During July the trade union situation again showed improvement being a continuation of the upward movement manifested since the end of April. At the close of July reports were received from 1,531 local trade unions, with a combined membership of 156,133 persons, 8,054 of whom, or a percentage of 5.2, were out of work, as compared with percentages of 6.1 in June, and 5.4 in July, 1924. Unions in Nova Scotia, New Brunswick, Quebec, Manitoba and Alberta were more active than in June, the most substantial gain being in Quebec, where greater employment was afforded workers in the garment trades. In the remaining provinces there were slight declines. The increase in employment in the manufacturing industries was for the most part due to greater activity among garment workers, though the situation for glass and wood workers, cigar makers, papermakers, printing tradesmen and hat and cap workers was also more favourable. The textile and iron and steel trades reported a slight adverse change, and metal polishers and jewelry workers registered considerable unemployment. Coal miners in Nova Scotia and Alberta were busier, but British Columbia miners were slightly less favourably situated. Asbestos miners in Quebec and quarry workers in Nova Scotia were fully engaged. In the building trades reports were tabulated from 170 unions with 17,206 members, 7.4 per cent of whom were unemployed as compared with 8.4 per cent in June. The level of employment was

considerably higher than in July of last year, when 12.1 per cent of the members were out of work. Bridge and structural iron workers, bricklayers, masons and plasterers, electrical workers, granite and stone cutters, plumbers and steamfitters and hod carriers were better engaged, but steam shovel and dredgemen, painters, decorators and paperhangers and tile layers were slacker. No change in the situation was reported by carpenters and joiners. In comparison with July of last year steam shovel and dredgemen, bridge and structural iron workers and painters, decorators and paperhangers were the only tradesmen to report declines. In the transportation group 2.6 per cent of the members reported were unemployed, as compared with 3.2 per cent in June and with approximately 4 per cent in July of last year. Water transportation improved considerably as compared with June, and steam railway employees whose returns comprise slightly over 82 per cent of the entire group membership reported were also busier. In the local transportation group a nominal change for the better was registered by street railway employees, while teamsters and chauffeurs registered no unemployment. Retail shop clerks were slightly busier. Hotel and restaurant employees and barbers were more active, but the situation for theatre and stage employees and stationary engineers and firemen was slightly less favourable. Fishermen reported no unemployment. Lumber workers and loggers were slacker.

EMPLOYMENT OFFICE REPORTS. During the month of July 1925, the offices of the Employment Service of Canada made 30,027 references to positions and effected a total of 28,788 placements. Of these the placements in regular employment were 20,964, of which 17,221 were of men and 3,743 of women. The placements in casual work numbered 7,824. The offices of the Employment Service were notified of 31,502 vacancies, of which 23,035 were for men and 8,467 for women. Applications for work were registered from 29,361 men and 10,141 women, a total of 39,502. A slight increase is shown in the volume of business transacted when the above figures are compared with those of the preceding month and also with the records of July a year ago, the reports for June 1925 showing 29,335 vacancies offered, 38,017 applications made and 27,069 placements effected, while in July 1924, there were recorded 26,589 vacancies, 36,105 applications for work and 24,361 placements in regular and casual employment. A report in detail of the work of the offices for the month

of July 1925 may be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES. The Dominion Bureau of Statistics reports that the production of pig iron in Canada in July was 20,946 long tons, a decline over the June output of 45,883 or 45 per cent, and the lowest tonnage reported for any month since the establishment of monthly records in 1917. Most of the loss for the month was in basic pig iron, this grade falling to 73 tons as compared with 38,679 tons in June, malleable iron indicated a decline from 4,079 tons in June to 3,206 tons in July. 17,667 tons of foundry iron, or 565 per cent over the 3,125 tons in June, was also produced. The cumulative output for the first seven months of the year, was 11,838 tons, as compared with 472,585 tons produced during the same period of last year. The year's output consisted of 252,543 tons of basic iron; 39,413 tons of foundry iron and 19,822 tons of malleable iron. Two furnaces were in blast at the end of the month located as follows: one at Sault Ste. Marie and one at Hamilton, Ontario. The daily capacity of the active furnaces was 775 tons or about 15 per cent of the possible daily output of all blast furnaces in the Dominion. Ferro-alloys at 2,209 tons marked a slight decrease from the 2,229 tons of June and consisted mainly of the grade containing about 80 per cent manganese. A small quantity of ferro-silicon was also produced.

In July the production of steel ingots and castings in Canada was 22,471 long tons, a decline of 40,669 tons below the 63,140 tons of June. The decline from the output in June was general in all grades with the single exception of bessemer steel castings which increased to 149 tons. Basic open hearth steel ingots made for further use by the reporting firms decreased to 21,157 tons or 65 per cent below the 60,983 tons of June. Other grades produced in July were 613 tons basic open hearth steel castings and 552 tons electric castings. For the seven months ending July, the cumulative production was 446,168 tons or 18 per cent below the 540,970 tons for the first seven months of last year. This year's output consisted of 435,048 tons of steel ingots and 11,120 tons of steel castings.

Statistics of coal production for July are not yet available. There was an increase of 9 per cent in the output of coal from Canadian mines during June, as compared with May, the total output amounting to 732,759 tons in June and 666,755 in May. Compared with the average for June during the preceding

five years. there was a decrease of 32 per cent. The total number of men employed in the coal mines of the Dominion during June was 18,611 of whom 14,195 worked underground and 4,416 on surface, as compared with a total of 14,337 in May, of whom 10,074 worked underground and 4,263 on surface. Production per man was 39.4 tons in June, as against 64.2 tons per man in May. During June, the production per man-day was 3.3 tons, as compared with 2.3 tons in May.

A report from the Department's correspondent at Cobalt, Ontario, shows that twenty-six cars containing approximately 2,067,310 pounds of silver ore were shipped from the Cobalt Camp during the month of July; as compared with twenty-one cars of silver ore containing 1,650,374 pounds in June. The Nipissing mines shipped 145 bars containing 166,213.42 ounces of silver and The Mining Corporation of Canada shipped 201 bars containing 199,257.83 ounces of silver, making a total of 346 bars containing 365,471.25 ounces of silver shipped during the month of July. This compares with 460 bars containing 503,596.51 ounces of silver shipped in June.

A report from the British Columbia Forestry Branch shows that 179,220,376 feet of timber, board measure, was scaled in the province in July, 1925. The total timber scaled in the province during the first seven months of the year was 1,242,419,994 feet board measure.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, amounted to \$20,370,614 in July, 1925, as compared with \$19,986,670 in July, 1924. The gross earnings of the first seven months of the year are given as \$125,914,357, as compared with \$134,849,228 in the same period last year.

The gross earnings of the Canadian Pacific Railway Company are given in a preliminary statement as \$15,188,048 in July, 1925, as compared with \$14,883,667 in July, 1924. The gross earnings for the first seven months of 1925 were \$90,343,868, as compared with \$99,540,594 in the first seven months of 1924.

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in July in sixty cities throughout Canada showed a decline of 13.7 per cent as compared with the previous month, but in increase of 9.6 per cent as compared with July, 1924. The total for July, 1925, was \$12,637,551; for June, 1925, \$14,651,613; and for July, 1924, \$11,526,316.

The total value of construction awards for the month of August, throughout Canada, as compiled by MacLean Building Reports, Limited, was \$31,207,500, being the largest total for August since 1921. The total awards for July, 1925, was \$22,179,400 and for August, 1924, \$23,664,500. Residential building accounted for 30.6 per cent of the August, 1925, total and amounted to \$9,539,600; business building totalled \$5,788,600, or 18.5 per cent; industrial building, \$5,199,500, or 16.7 per cent and public works and utilities \$10,679,800, or 34.2 per cent. The activity was distributed among the provinces as follows: Quebec, 43.6 per cent; Ontario, 34.3 per cent; Prairie Provinces, 8 per cent; British Columbia, 7.8 per cent and the Maritime Provinces, 6.3 per cent.

FOREIGN TRADE

A summary of Canadian trade prepared by the Department of Customs and Excise shows that in July, 1925, the merchandise entered for consumption amounted to \$81,492,403 as against \$72,631,365 in July, 1924. The domestic merchandise exported amounted to \$101,678,787 in July, 1925, as compared with \$93,462,993 in June, and with \$87,059,218 in July, 1924. Foreign merchandise exported amounted to \$1,601,132 in July, 1925, and to \$1,161,310, in July, 1924.

The chief imports in July, 1925, were: fibres, textiles and textile products, \$16,774,697; iron and its products, \$15,096,626; non-metallic minerals and products, \$14,429,837; and agricultural and vegetable products, mainly foods, \$11,204,777.

The chief exports in the same month were in the following groups: agricultural and vegetable products, mainly foods, \$34,343,503; wood, wood products and paper, \$23,913,253; animals and animal products, \$22,618,889; and non-ferrous metals and their products, \$7,538,043. During the four months ending July, 1925, exports of agriculture and vegetable products, mainly foods, were valued at \$124,110,750; wood, wood products and paper at \$85,980,672; animals and animal products at \$53,546,813; non-ferrous metals and their products at \$29,560,597; and agricultural and vegetable products other than foods, at \$20,750,814.

Strikes and Lockouts

The time loss due to industrial disputes was less in August than in either July, 1925, or August, 1924. There were in existence during the month 17 disputes, involving 13,003 employees, and resulting in a time loss of 102,316 working days, as compared with 16 disputes in July, involving 12,882 workpeople.

and resulting in a time loss of 320,433 working days. In August, 1924, there were recorded 16 disputes involving 9,472 employees and resulting in a time loss of 206,118 working days. Five new strikes and lockouts commenced during August with a time loss of 3,983 working days. Five of the strikes and lockouts commencing prior to August, and two of the strikes and lockouts commencing during August, terminated during the month. At the end of the month, therefore, there were ten strikes and lockouts on record affecting 616 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices advanced somewhat during the month due mainly to seasonal changes. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.84 at the beginning of August as compared with \$10.49 for July; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.92 for June, 1920 (the peak); \$16.42 for August, 1920; \$13.31 for August, 1918; and \$7.68 for August, 1914. Potatoes were substantially higher in price with the marketing of the new crop. Advances also occurred in eggs, butter, cheese, pork, bacon, and lard while beef, bread, flour, rolled oats and tea were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.05 at the beginning of August as compared with \$20.70 for July; \$20.57 for August, 1924; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.92 for July, 1920 (the peak); \$26.60 for August, 1920; \$21.20 for August, 1918; and \$14.41 for August, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced slightly to 159.5 for August as compared with 158.4 for July; 156.8 for August, 1924; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; and 202.8 for August, 1918. In the grouping according to chief component material, five of the eight main groups moved upward, one downward and two were practically unchanged. The groups which advanced were: Vegetables and Their Products due to advances in the prices of wheat, flour, potatoes and rice which more than offset the declines in imported fruits, corn, oats, barley and rubber; Animals and Their Products due to higher prices for hogs, sheep,

bacon, butter, cheese, lard, hides and leather. Non-Ferrous Metals and Their Products because of a general upward movement in the prices of these metals; Non-Metallic Minerals and Their Products because of higher prices for coal; and Chemicals and Allied Products. The Textiles and Textile Products group declined because of lower prices for cotton and wool. The Iron and Its Products group and the Wood and Wood Products group were both practically unchanged.

The Consolidated Mining and Smelting Company began during August to give a pint of milk each shift to each employee working around the lead furnaces and roasters at Trail, British Columbia. The milk is delivered at the place of work or kept in refrigerators until the men wish to drink it. About 400 men benefit by this arrangement, and they are stated to appreciate the interest thus shown by Company in their welfare. Milk is stated to act as an antidote or preventive of lead poisoning. The same company on September 1 increased by 30 cents the "metal bonus" per man per day, which is based on the price of lead and zinc.

The Summer School of Social Science held its third annual season at West Summerland, British Columbia, from August 16 to 30. The promoters of the undertaking hope that it will be the forerunner of a labour college for British Columbia workers. The lectures covered economics, the labour movement, literature, art and music. Following each lecture time was allotted for discussion and questions. No charge is made by the school for tuition, and the classes are open to all. Tents and sleeping accommodation are supplied, but visitors bring their own blankets and share cost of food, which is served in a common dining room.

The *Canada Lumberman* says that New Brunswick is in advance of the other provinces in Canada in regard to forest fire protection, the Board of Education having made this subject a part of the school curriculum.

Twenty-five fishermen and their families from the Hebrides, Scotland, are to be assisted in settling on the west coast of Vancouver Island next spring. The Governments of British Columbia and Great Britain are to share the expenses of their settlement.

The Legislative Assembly of British Columbia will meet in its annual session on November 2.

PROCEEDINGS OF THE CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

THREE new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This Board was established under an Order in Council dated July 11, 1918, while the war was still in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods. A summary of the recent decisions of the Board is given in the following paragraphs. Summaries of earlier decisions appeared in the issue for August, 1925, and in previous issues.

Case No. 256.—Canadian National Railways (central region) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

Two brakemen handling an extra baggage car claimed that they should be paid at the through freight rates in accordance with Rule 2 of their schedule, which is as follows:—

"Freight trainmen running passenger trains will be paid through freight rates, except when relieving regular passenger trainmen, when they will be paid the passenger rates of the men relieved."

The employees claimed that they were not relieving a regular passenger trainman, and that, further, the company had formerly paid freight rates for this service. The railways contended that the two men were spare freight brakemen and that as they were assisting to perform baggage work on a regular passenger train they should receive the regular baggagemen's rate. The Board, however, found that the men had been called, not to relieve regular passenger trainmen, but to handle overflow business, and therefore sustained the employees' contention.

Case No. 257.—Canadian National Railways (central region) and the Order of Railway Conductors, and the Brotherhood of Railroad Trainmen.

The railways and the Brotherhood disagreed as to manning of work trains operating exclusively within the yard limits, and the rates that should apply. The employees contended that yardmen should handle such trains, while the railways claimed that there was nothing in the schedule covering former Grand Trunk lines which sustained the employees' contention.

The Board found that under the agreement in effect, yardmen who are required to per-

form any class of service within yard limits are entitled to yard rates. As however the question at issue had not been specifically provided for in the agreement, and as varying practices had prevailed in the past, the Board recommended that the parties should confer with a view to reaching an understanding as to the manner in which work train service entirely or partly within yard limits should be distributed between yardmen and roadmen.

Case No. 258.—Canadian National Railways (central region) and the Order of Railway Conductors, and the Brotherhood of Railroad Trainmen.

A conductor and crew on reaching the terminal of a trip were required, owing to congestion in the yard, to run their train to a point beyond the terminal. They claimed that miles or hours should be paid for the regular run, and that a new trip, with a minimum of 100 miles, should be paid for the run beyond the terminal. The railways claimed that the men should be paid continuous mileage under article 8, clause A, of their schedule, which reads:—

"In all classes of service, other than passenger, trainmen's time will commence at the time they are required to report for duty and shall continue until the time they are relieved from duty at end of run. All advance-time call rules are superseded, and the management may designate the time for reporting for duty."

The Board sustained the contention of the employees.

Food Council Established in Great Britain

A Food Council has been established for Great Britain in accordance with the recommendations contained in the report of the Royal Commission on Food Prices, of which an outline was given in the June issue of this GAZETTE. The terms of reference of the Council are as follows:—To investigate and from time to time report to the President of the Board of Trade on such questions as, by reason of complaints from persons interested or otherwise, appear to the Council to require investigation in the interests of consumers or traders, or are referred to them by the President of the Board of Trade, relating to the supply or price of articles of food of general consumption, and in particular to the following:—wheat, flour, bread, meat, bacon and ham, milk, butter, cheese, eggs, fish, fruit and vegetables, sugar, and tea.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1925

THE number of strikes and lockouts during August was 17, as compared with 16 in July. The time loss for the month was less than in August, 1924, being 102,316 working days, as compared with 206,118 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
August, 1925.....	17	13,003	102,316
July, 1925.....	16	12,882	320,433
August 1924.....	16	9,472	206,118

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Twelve disputes, involving 12,480 work-people, were carried over from July. Five of the strikes and lockouts commencing prior to August, and two of the strikes and lockouts commencing during August, terminated during the month. At the end of August, therefore, there were on record ten strikes and lockouts as follows: cigarmakers at Montreal; clothing workers at Montreal; hat and cap makers, Toronto; fur workers, Montreal; fur workers, Toronto; printing compositors and stereotypers at Edmonton; moulders, Owen Sound; upholsterers, Montreal; carpenters and labourers, Quebec, and carpenters, painters and plumbers at Kingston. The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet called them off. Information is available as to five such disputes, namely, moulders at Galt, commencing August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Hamilton, January 30, 1925; moulders at Sarnia, March 3, 1925, and street railway employees at St. John, N.B., June 29, 1921.

Of the disputes which began during August, two were for increased wages and shorter hours, one was against an alleged

violation of an agreement, another was against the employment of non-unionists, and the fifth was in sympathy with a strike of seamen in China. Of the strikes and lockouts which terminated during August, two were in favour of employers, three in favour of the employees, and two ended in a compromise, or were partially successful.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

COAL MINERS, EDMONTON, AND CLOVER BAR, ALTA.—The strike of 400 coal miners in Edmonton and Clover Bar which was carried over from the previous month's record, terminated August 25, when the miners voted to approve the settlement resulting from the mediation of the Departmental Fair Wages Officer during July. The agreement provided for a reduction of 13 per cent on contract rates, 5 per cent reduction on timbermen, tracklayers and cagers, and 10 per cent reduction on drivers, these rates to remain in effect for one year, instead of decreases from 10 to 20 per cent proposed by the employer at the time of the strike.

COAL MINERS, NOVA SCOTIA.—The dispute involving some 11,000 coal miners in Nova Scotia in a cessation of work on March 6, was terminated early in August, the maintenance men going back on August 7, and mining being resumed August 9. A special article dealing with the termination of this dispute appeared in the August issue of the *LABOUR GAZETTE*, page 771, a wage reduction of 6-8 per cent being agreed to instead of the 10 per cent proposed, the Provincial Government to make an investigation into the industry.

CLOTHING WORKERS, MONTREAL, QUE.—A strike of 181 clothing workers occurred in Montreal, August 17, when it was alleged the employer violated the existing agreement and instituted an open shop. At the end of the month it was reported that to a great extent the workers had been replaced.

HAT AND CAP MAKERS, MONTREAL, QUE.—The strike of 73 hat and cap makers in the employ of six firms, which occurred on July 30, when the employers refused to renew the agreement expiring July 31, or to negotiate with the union for a new agreement, terminated August 16, the company renewing the agreement. Work was resumed August 18.

PAPERMAKERS, FORT WILLIAM, ONT.—The strike commencing on May 20, involving some 32 papermakers at Fort William, because the

STRIKES AND LOCKOUTS DURING AUGUST, 1925.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to August, 1925			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Edmonton and Clover Bar, Alta.....	400	8,000	Commenced July 1, against a reduction in wages. Settled by negotiations and work resumed August 25. Compromise.
Coal Miners, Nova Scotia.....	11,463	80,241	Commenced March 6; failure to agree on certain changes in wages and stoppage of credit at company's store. Settled by mediation of the Premier of Nova Scotia and work resumed August 10. Compromise.
MANUFACTURING— <i>Tobacco and liquor:</i> Cigarmakers, Montreal, Que...	1	26	Commenced March 24, against a reduction in wages. Unterminated.
<i>Clothing, including knitted goods:</i> Hat and cap makers, Montreal, Que.....	73	1,022	Commenced July 30, failure to renew expiring agreement or to negotiate a new one. Settled by negotiations. Agreement renewed and work resumed Aug. 18.
Hat and cap makers, Toronto, Ont.....	8	208	Commenced June 16, for recognition of the union. Unterminated.
<i>Fur and leather products, other than boots and shoes:</i> Fur workers, Montreal, Que...	200	5,200	Commenced April 1, failure to agree on certain changes in agreements and on proposed substitution of separate agreements. Unterminated.
Fur workers, Toronto, Ont....	4	104	Commenced February 20, for recognition of the union. Unterminated.
<i>Pulp and paper:</i> Papermakers, Fort William, Ont.....	13	52	Commenced May 20, for renewal of agreement without changes in working conditions. Settled by negotiations and work resumed August 5 under conditions originally in force. In favour of employees.
<i>Printing and publishing:</i> Printing compositors and stereotypers, Edmonton, Alta.....	16	416	Commenced June 19, against a reduction in wages. Unterminated.
<i>Iron, steel and products:</i> Moulders, Owen Sound, Ont...	9	234	Commenced January 19, against a reduction in wages. Unterminated.
<i>Miscellaneous:</i> Upholsterers, Montreal, Que...	41	1,066	Commenced June 27, for improved working conditions. Unterminated.
CONSTRUCTION— <i>Shipbuilding:</i> Riveters, Lauzon, Que.....	252	1,764	Commenced July 30, against a reduction in wages. Settled by negotiations and work resumed on employers' terms, August 10.
(b) Strikes and lockouts commencing during August, 1925			
MANUFACTURING— <i>Clothing, including knitted goods:</i> Clothing workers, Montreal, Que.....	181	2,353	Commenced August 17, against alleged violation of agreement. At the end of the month it was reported the workers were replaced to a great extent.
CONSTRUCTION— <i>Buildings and structures:</i> Carpenters and labourers, Quebec, P.Q.....	140	980	Commenced August 24, for increased wages and shorter hours. At the end of the month it was reported the workers were replaced to a great extent.
Carpenters, painters and plumbers, Kingston, Ont....	16	76	Commenced August 24, against the employment of non-unionists. Unterminated.

STRIKES AND LOCKOUTS DURING AUGUST, 1925—*Concluded.*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(b) Strikes and lockouts commencing during August, 1925—<i>Concluded</i>			
<i>Miscellaneous:</i> Labourers, Prince Rupert, B.C.	170	510	Commenced August 8, for increased wages and shorter hours. Settled through mediation of Deputy Minister of Labour for British Columbia and Fair Wage Officer of Department of Labour. Work resumed August 12. In favour of employees.
TRANSPORTATION AND PUBLIC UTILITIES— <i>Water transportation:</i> Seamen (Chinese), Vancouver, B.C.....	16	64	Commenced August 20, in sympathy with strike in China. Men arrested and sentenced to six weeks in jail.

employer refused to renew the agreement unless a clause permitting the management to have a skilled man go over the machines on Sunday preparatory to starting work on Monday morning was inserted, was terminated August 5, when the previous agreement was again entered into without change.

CARPENTERS AND LABOURERS, QUEBEC, QUE.—A strike of 140 carpenters and labourers occurred at Quebec on August 24, for increased wages and shorter hours. The carpenters demanded an increase from 45 cents per hour to 55 cents per hour and a reduction in hours from twelve per day to ten per day. At the end of the month it was reported that the workers were replaced to a great extent.

CARPENTERS, PAINTERS AND PLUMBERS, KINGSTON, ONT.—Sixteen carpenters, painters and plumbers ceased work August 24, in protest against the employment of non-unionists brought from Toronto. This strike remained unterminated at the end of August.

RIVETERS, LAUZON, QUE.—The strike of 252 riveters at Lauzon, Que., which began July 29, terminated August 10, when the riveters accepted their employer's terms of \$2.70 per hundred rivets, instead of \$3 per hundred rivets, as they had demanded.

LABOURERS, PRINCE RUPERT, B.C.—On August 8, 170 labourers employed on the construction of an elevator, ceased work when their demands for an eight-hour day, double time on Sundays and \$5 per day, were refused. The rates being paid were 50 cents and 55 cents per hour, with the hours ranging from eight to ten per day. Through the mediation of the Deputy Minister of Labour for British Columbia and the Fair Wages Officer of the Department of Labour, a settlement was brought about whereby the rates under which the employees resumed work were to be 57½

cents per hour, and time and one-half for overtime beyond the eight-hour day. Work was resumed August 12.

SEAMEN (CHINESE), VANCOUVER, B.C.—A strike of 16 Chinese seamen occurred about August 20, in sympathy with a strike of seamen in China. The strikers were charged with an offence under the Canada Shipping Act and sentenced to six weeks in jail.

Five-Day Working Week

The New York *World* recently investigated the movement for a five-day working week for the summer months in fourteen of the largest cities in the United States. The inquiry showed that the idea is being adopted by a growing number of industrial and commercial concerns, and that there is no tendency to revert to the longer week schedule. The movement, however, it is pointed out, is not to be confused with the labour proposals for a basic all-year-round five-day week. Employers were not agreed as to the success of the new policy, but a large number reported better morale among the employees without any loss of business. For example, the Electric Meter Corporation reported that they tried it in their own branch of industry last summer, with the understanding that there should be no falling off in the quantity or quality of the output. Five and a half days' work was to be done in five. This was accomplished and the full Saturday holiday was earned without any diminution in production.

Montreal firemen prevented a serious disaster at a candy factory on September 8, when over a hundred female employees were threatened with suffocation by ammonia fumes. The accident was the result of a break in a pipe in the basement.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND IN JULY

The British *Ministry of Labour Gazette* for August states that the number of trade disputes involving a stoppage of work reports to the Department as beginning in July in Great Britain and Northern Ireland, was 45, as compared with 48 in the previous month and 57 in July, 1924. In addition, 33 disputes which began before July were still in progress at the beginning of the month. The number of new and old disputes in July was thus 78.

Information as to the total number of workpeople involved in the principal dispute, involving workpeople employed in the wool textile industry in the West Riding of Yorkshire and part of Lancashire, is not at present available. Excluding this dispute, however, the number of workpeople who went on strike or were locked out or were thrown out of work at establishments where disputes occurred, in consequence of the disputes, in the disputes in progress in July was about 51,000, and the aggregate number of working days lost in disputes during the month was

about 732,000. The greatest loss in working days was incurred in the mining and quarrying group in which 44,000 workpeople were involved in a dispute which lasted for 680,000 working days.

Of the 45 disputes beginning in July, 11 arose out of proposed reductions in wages, 12 on other wages questions, 9 on questions respecting the employment of particular classes or persons, 6 on questions of Trade Union principle, and 7 on other questions. Settlements were effected in the case of 28 new disputes, directly involving 6,000 workpeople, and 12 old disputes, directly involving 500 workpeople. Of these new and old disputes, 6, directly involving 300 workpeople, were settled in favour of the workpeople; 13 directly involving 1,300 workpeople, in favour of the employers; and 21, directly involving 4,900 workpeople, were compromised. In the case of 3 disputes, directly involving 1,200 workpeople, work was resumed pending negotiations.

MACHINERY OF CONCILIATION AND ARBITRATION IN GREAT BRITAIN

The machinery for conciliation and arbitration of labour disputes in Great Britain is described in a series of leaflets published at Oxford by *Industrial Peace*, as follows:—

“For trades in which the parties are badly organized, or not organized at all, trade boards are provided. The Trade Boards Acts of 1909 and 1918 empower the Minister of Labour to set up a trade board to determine what shall be the minimum rate of wages in a given industry. The findings of a trade board, once they have been confirmed by the Minister of Labour, become obligatory for all those in the trade and can be enforced by a court of law. But trade boards are set up only for industries that appear to be unable, owing to lack of organization, to regulate their wage rates for themselves. They are designed to protect those who cannot protect themselves: and they may be regarded as a first step towards enabling the parties to fix wages by collective action and to keep the peace.

“Many of the best organized industries, e.g., the cotton, coal mining, engineering and railway industries, have developed special machinery suited to their peculiar needs. Of this machinery it is enough to say here that in general it has justified itself. When men

meet face to face and hear each other's points of view they are already halfway towards a settlement; and in very many cases the joint consideration of difficulties by employers and employed has carried them the whole way.

“For the remaining industries that are reasonably well organized on both sides there exist the joint industrial councils (“Whitley Council”). These voluntary bodies can only be brought into existence with the consent of the employers' associations and trade unions. Their scope varies in different industries, but they have done excellent work not only in preventing strikes, but also in co-operation in objects of joint interest, such as health and technical training.

“Finally the Industrial Courts Act provides a ready means of conciliation and arbitration when the machinery of any industry has proved, or seems likely to prove, unequal to its task. Under the act the Minister of Labour has various powers. Upon an application by both parties in a dispute he can appoint an arbitrator or a court of arbitration that shall have power to give a binding decision. If either party, or both, desires it, he can appoint a court of inquiry which, after investigation, shall make a report to the House of

Commons. And the minister, whether appealed to or not, can of his own accord 'inquire into the circumstances of any trade dispute, actual or apprehended,' and can 'refer any matters appearing to him to be connected with or relevant to the dispute to a court of inquiry appointed by him for the purpose of such reference.' The Court may consist of one individual or of several. The Engineering Inquiry of 1922 was conducted by one person only, but the usual number is three—an in-

dependent chairman together with one employer and one representative of labour. The report may confine itself to questions of fact or it may also submit opinions and make recommendations for the parties to consider. The recommendations of a Court of Inquiry, however, do not constitute an award. They merely present the case as it appears to an outsider or group of outsiders, and therefore as the general public might reasonably be expected to view it. They naturally affect the trend of public sympathy."

STRIKE OF ANTHRACITE COAL MINERS IN THE UNITED STATES, SEPT. 1, 1925

A cessation of work in the anthracite coal mines in the State of Pennsylvania occurred on September 1, owing to the expiration of an agreement and the failure of the two parties to reach a new agreement. The miners at a convention at Scranton, beginning on June 29, had decided to demand an increase of ten per cent in wages for contract miners and \$1 per day for day paid miners and that the operators should collect union dues from the miners' pay (the check off), with certain other changes in conditions. The representatives of the miners and the anthracite operators met at Atlantic City on July 9. The miners presented their demands and the operators replied that they could not grant an increase in wages as it would increase the prices of coal, and that substitutes for anthracite were seriously reducing its markets. The operators proposed that wages should be reduced ten per cent, refused the check off, and suggested that it should be agreed that no suspension of work should occur on September 1, but that all differences not settled should be referred to arbitration.

A sub-committee of the Joint Conference was then appointed and all the matters at issue were referred to it. This sub-committee held meetings until August 4, when the negotiations were terminated, the operators stating that it was impossible to concede any demands that would increase the price of coal, and that the operators' representatives on the sub-committee had not been given authority to agree to anything but a reduction in wages.

A committee of citizens from the anthracite mining district then met the miners and operators and attempted to have negotiations resumed. The miners refused to accept the suggestion unless the operators would agree to withdraw their statement that they could not agree to any increases in wages. The

operators refused to do this, stating they would consider such proposals but would oppose them. The committee after a further interview with the miners' representatives then disbanded. A suspension order was issued by the miners' committee on August 27, it having been agreed that maintenance men should do necessary work for the care of the mines at existing rates of pay.

Accidents and Compensation in Ontario in August

The Workmen's Compensation Board awarded during the month of August \$440,-814.74 in benefits to injured workmen and their dependents, \$372,943.44 of this being for compensation and \$67,871.30 for medical aid. The accidents reported during the month numbered 5,698, of which 37 were fatal, as compared with 5,511 during July, of which 21 were fatal. The number of accidents reported during August a year ago was 4,966, and the benefits awarded amounted to \$565,208.15.

The Ontario Department of Health, in connection with the work of the bureau of industrial hygiene suggests that something be done to correct the serious lack of co-ordination between the different government bodies concerned to the workers' health, especially the Workmen's Compensation Board, the Factory Inspection Branch and the Industrial Hygiene Division." It is also announced that the Ontario Department of Health proposes to extend the health service by co-operating with the Northern Development Branch under the Department of Lands and Forests.

WEEKLY REST FOR DOMINION GOVERNMENT EMPLOYEES

AN Order in Council has been adopted by the Dominion Government under date of September 7, 1925, relative to a weekly day of rest for Dominion Government employees. The text of the Order is as follows:—

P.C. 1537

*Report of the Committee of the Privy Council,
approved by His Excellency the Governor
General on the 7th September, 1925.*

The Committee of the Privy Council have had before them a Report, dated 3rd September, 1925, from the Minister of Labour, submitting:

That the Lord's Day is customarily and by law observed in Canada as a day of rest;

That it is provided in the Dominion Lord's Day Act (R.S.C., chap. 153), that in the case of certain classes of employees who are required to work on Sunday they shall be allowed a compensatory period of rest;

That the Civil Service Act, 1918 (chap. 12 of 1918), as amended by chap. 41 of 1920, provides for the observance of Sunday as a holiday in and by the Civil Service;

That investigation has disclosed that there are many employees of the Dominion Government who on account of the special nature of their duties are required to work on Sundays;

That the attention of the Government has been directed to a certain Draft Convention and Recommendation adopted by the International Labour Conference (League of Nations) in 1921, with a view to securing to all employees in industrial and commercial employment a weekly period of rest of at least twenty-four consecutive hours; and

That it is considered desirable that the general principle embodied in the Draft Convention and Recommendation aforesaid should be applied and observed so far as possible in the administration of the public service of Canada;

The Minister, therefore, recommends that the policy of the Government on this subject be hereby declared as follows:

(1) That no employee of the Dominion Government should be required to work on Sunday except in circumstances of emergency or necessity,

(2) That in the case of any such employee who by reason of emergency or necessity is required to work on Sunday, he shall be allowed, in substitution, during the next six days of such work, a compensatory period of rest of twenty-four consecutive hours,

(3) That no exceptions to the foregoing principle shall be allowed except by departmental authority, and then only in cases where there may be no substitute help available to perform the duties which are involved.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) E. J. LEMAIRE,
Clerk of the Privy Council.

Town Planning in Canada

Of the nine provinces of Canada the following seven have town planning Acts: Nova Scotia, New Brunswick, Prince Edward Island, Ontario, Manitoba, Saskatchewan and Alberta.

Under these various Acts a good deal of work has been accomplished. In Nova Scotia plans have been made for the Halifax district; in New Brunswick a scheme has been prepared for the city and county of St. John.

In Ontario about a dozen cities and towns have appointed town planning commissions and several have had plans for future development prepared. Manitoba has a town planning department with a comptroller of town planning to whom all plans of proposed subdivisions are referred. Saskatchewan has a provincial director of town planning under the minister of municipal affairs. The director deals with subdivisions of land and the location, direction and width of streets.

The Vancouver branch of the Town Planning Institute of Canada has presented to the legislature of British Columbia a draft of a suggested act and the secretary of that branch considers it probable that his measure will be introduced at the next session of the legislature.

While Quebec has not as yet passed a town planning act there is evident a good deal of interest in town planning matters, notably perhaps in Montreal. Although the actual achievement in town planning in Canada is perhaps not as yet proportionally as large as in Great Britain and the United States, there is, none the less, a very vital interest in the subject throughout the Dominion.

According to the New York *World* the Bethlehem Steel Corporation has accepted the resignation of three of its chief officials in order to effect economies and to avoid the necessity of reducing the wages of its labourers.

LABOUR IN BRITISH COLUMBIA IN 1924

Annual Report of Provincial Department of Labour

ULL information in regard to labour conditions in British Columbia in 1924 is given in the seventh annual report of the Provincial Department of Labour. The functions of this Department, which was established under the Department of Labour Act of 1917, were outlined in the April issue of this GAZETTE (page 356). One of its duties is to require employers to furnish returns as to the number, occupations, wages, hours of labour, etc., of their employees. These returns become more complete with each successive year, and supply the department with material for an annual statistical survey of the industries of the province that is of increasing value.

Pay-roll of Province.—The number of returns received for 1924 was 3,566, or 191 more than last year, and about three times the number received for 1919. These returns however do not cover the entire field, as certain industries necessarily remain outside the enquiry. These outside industries, which are not covered by the annual survey, include industrial workers, employed by wholesale and retail firms, whose wages are estimated to amount to \$3,000,000; delivery, cartage, teaming, and warehousing, \$1,730,000; butchers, \$950,000; moving-picture operators, \$147,000; coal and wood yards, \$604,000; and auto transportation, \$169,000. The transcontinental railway systems and their industrial adjuncts, for which also the department's questionnaire is not suitable, have a pay-roll estimated at \$20,000,000. A large amount of industrial and semi-industrial work is also done by employees of the Dominion and Provincial Governments, for whom a sum of \$5,000,000 is allowed; while miscellaneous payments which cannot be included under any particular head are set down at \$3,000,000. Including these figures an estimate is made for the total industrial pay-roll of the Province at \$151,037,316. This total is divided according to the area in which the wages were earned as follows: Greater Vancouver, \$54,449,747.95; Rest of Mainland, \$67,992,347.26, and Vancouver Island, \$28,595,220.99.

Average Wages.—The total amount paid out by the 3,566 firms from which returns were received for 1924 was \$107,798,771. In the previous year the sum of \$106,796,959 was paid out by 3,375 firms, and in 1922 there were 2,809 firms making returns, whose salary and wage payments amounted to \$86,192,191.

The amount paid to officers, superintendents and managers last year was \$9,749,110, which represents an increase, as compared with the corresponding total for 1923, of more than 10 per cent. For clerks, stenographers, and salesmen the amount paid was \$8,934,731, which, compared with \$8,329,069 in 1923, is an increase of over 7 per cent. However, the amount paid to wage-earners, \$89,114,930, is \$515,185.73 less than that of the previous year, the decrease being equal to about half per cent. This is only partially explained by the fact that the two principal industries which give a lower aggregate payment for the year, lumbering and coal-mining, are those which normally make the largest proportionate payment to wage-earners. In nearly all the other classes of industry the percentage of payment for managerial and clerical help is higher than last year's.

An interesting table compares the wage rates of various industries in 1924 with those of the previous years. The figures represent an average full week's wage of adult males in each industry:—

Industry	1919-20	1921	1922	1923	1924
	\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.
Breweries.....	28 27	28 67	26 62	26 55	26 51
Builders' materials.....	31 65	28 82	25 61	26 83	26 10
Cigar and tobacco manufacture.....	32 48	23 97	25 30	23 32	24 07
Coal-mining.....	37 64	32 83	35 96	36 96	35 73
Coast shipping.....	26 81	28 45	25 43	28 36	29 59
Contracting.....	31 61	28 82	28 06	28 31	27 98
Explosives, chemicals, etc.....	31 53	26 34	26 13	26 63	26 86
Food products, manufacture of.....	29 72	25 67	27 39	25 61	25 94
Garment making.....	36 14	29 38	27 28	29 85	28 38
House furnishing.....	28 79	26 00	24 23	24 74	25 53
Manufacturing jewellery.....	34 20	33 54	30 90	32 65	31 26
Laundries, cleaning and dyeing.....	28 42	27 32	26 11	25 07	25 70
Manufacturing leather and fur goods.....	28 81	29 85	26 67	26 73	26 44
Lumber industries.....	32 47	24 70	25 29	25 92	26 15
Metal trades.....	31 14	30 33	27 73	28 04	26 37
Metal-mining.....	35 96	32 00	30 97	32 21	31 84
Miscellaneous trades and industries.....	28 24	28 40	25 91	25 83	25 85
Oil-refining.....	28 52	35 73	32 63	32 71	33 06
Paint manufacture.....	27 23	24 14	21 79	23 13	24 69
Printing and publishing.....	35 97	36 30	36 23	38 09	39 52
Pulp and paper manufacturing.....	35 18	25 41	25 88	27 90	27 69
Shipbuilding.....	28 11	29 87	25 55	25 88	26 79
Smelting.....	36 44	31 98	29 91	34 16	35 14
Street railways, gas, water, power, telephones, etc.....	32 81	29 55	30 41	29 42	29 84
Manufacture of wood (N.E.S.).....	27 46	23 48	23 12	23 33	22 55

By pooling the figures for all the above industries, and taking into account the re-

spective numbers employed in them, we arrive at the average industrial weekly wage of all adult male wage-earners, as computed from returns, as follows:—

1918.....	\$27 97
1919.....	29 11
1920.....	31 51
1921.....	27 62
1922.....	27 29
1923.....	28 05
1924.....	28 39

A decline in lumbering activity was noted during the year. In 1924 the proportion of the total industrial wages that was paid to lumber workers was 29 per cent, as compared with 33 per cent in 1923. A decline was also recorded in the coal mining industry, in which the payroll declined by about two million dollars. On the other hand advances were shown in the metal trades, metal mining and other important industries. The report makes special mention of the rapid advance of coast shipping, which increased its payroll by nearly a million and a half. A large number of small crafts are now entering the carrying trade, while the coast fleets of some of the larger companies are also being increased.

Hours of Work.—An average of 50.59 working hours a week is shown in the tables of hours of work in various industries. As compared with the general average of the previous year, this is a reduction of 52 minutes. This reduction took place before the Hours of Work Act, 1923, took effect, and it is attributed to the desire of the employers to bring their working hours into harmony with the spirit of the Act before it came into force. The Hours of Work Act was outlined in the LABOUR GAZETTE for January, 1924. The Board of Adjustment under this Act begun its work during 1924, but no orders were issued until 1925.

Seasonal Employment.—The fluctuation of employment between winter and summer was somewhat less pronounced in 1924 than formerly, employment in the groups covered by the inquiry ranging from 58,677 men in January to 68,443 in May, declining later to 60,232 in December.

Decline of Oriental Labour.—In 1924, 72.33 of the employees were natives of English-speaking countries, compared with 69.61 per cent in 1923. The percentage of oriental workers to the total number of employees has shown a steady decline in recent years, being 11.97 in 1924; 13.85 in 1923; 14.61 in 1922; 14.45 in 1921; 16.64 in 1920; 18.35 in 1919, and 20.37 in 1918. Lumbering is the industry which employs the largest number of orientals. In this industry the percentage

of orientals showed a fall from 22.34 to 21.78. In other industries which employ an appreciable number of orientals the proportion showed a decline, as in coal-mining from 11.79 to 10.75 per cent, in fish-canneries from 43.83 to 31.38 per cent, and in pulp and paper mills from 30.14 to 22.32 per cent.

Labour Disputes.—The report gives an outline of the important work carried on by the Department during the year in the direction of conciliation, with a full account of all the labour disputes resulting in strikes and lock-outs. The labour disputes during the year were comparatively few in number, and were mostly of minor importance. The principal area of disturbance was the southeastern interior, where the two most serious disputes were witnessed, both of them presenting certain unusual features. One was caused by the calling out of the men of the logging camps by the Industrial Workers of the World early in the year, and the other was the dispute which led to the coal-miners, in common with those of Alberta, giving up their employment for several months in defence of a wage-list which was, in a sense, a survival of conditions brought about by the settlement of war-time disputes.

The report contains useful directories of associations of employers and of trade unions in the province, giving the names of the officials, times of regular meetings, etc.

Examination of United States Immigrants in Europe

The British and Irish Free State Governments have consented to an arrangement whereby the American Government will examine prospective emigrants at its consulates in Great Britain and the Irish Free State before issuing immigration visas. The consulates at which this examination will be carried out are London, Liverpool, Southampton, Glasgow, Belfast, Dublin and Queenstown. Passengers holding passports initiated by the medical and immigration inspectors will be examined at the pier in New York and will be admitted without going to Ellis Island unless special reasons exist to detain them. United States public health surgeons and immigration inspectors will act as technical advisers to the consulates in the ports mentioned. The other consulates in Great Britain and the Irish Free State will issue only non-immigrant visas in future, but where the status is doubtful they may refer applicants to one of the consulates at which the preliminary examination takes place.

REPORT OF ALBERTA BUREAU OF LABOUR FOR 1924

THE annual report of the Commissioner of Labour of the Province of Alberta for the calendar year 1924 shows a slight decline in the activity of the Bureau as compared with the previous year. The Bureau of Labour, established under the Bureau of Labour Act of 1922, collects and publishes information and statistics in regard to labour in the Province, and is responsible for the administration of the Provincial Employment Bureau, the Minimum Wage Act, the Factories Act, the Boilers Act, and the Theatres Act. The co-ordination of duties effected by the Bureau has eliminated overlapping in the work of the several branches. In connection with inspections under the provisions of The Factories Act and The Minimum Wage Act the services of all inspectors appointed within the Bureau were used. This has resulted in a more general system of inspection being carried out. The boiler inspectors when making inspection visits throughout the Province have made inspections of the factories outside the four principal cities. A number of these plants received their first inspection under the provisions of The Factories Act during the year. A total of one hundred and four factories situated in outlying points were inspected by the boiler inspectors at the time of their regular inspection visits.

Statistics of Trades and Industries.—Returns were received during the year from 785 firms, covering 16,190 male employees over eighteen, 375 males under eighteen, 2,090 females over eighteen, 98 females under eighteen, and 218 apprentices. The total pay-roll for wages and salaries was \$25,122,495, of which sum \$21,890,178 was paid to wage earners. The returns show a reversal of the general situation in that the months of April to September, which usually are the months when employment is greatest, were the months of least employment in the year. This is accounted for by the fact that the organized mine workers of the province were on strike during these months. With the exception of the general strike of mine workers, industry was very little disturbed during the year by industrial disputes. The total time loss in "man-days" was 1,175,247, all but about 10,000 being due to the general strike. Returns received by the Bureau showed a total of 177 labour unions in the Province with a membership of 17,060 males and 561 females. Of these 8,320 were in the mines, 3,463 males and 419 females in Edmonton, 3,583 males and 142 females in Calgary, 565 in Lethbridge, 430 in Medicine Hat, and 699 outside the four cities in occu-

pations other than mining. The monthly average number of employees fell from 15,571 male and 2,238 female employees in January, to 13,351 male, and 2,264 female employees in April, rising slightly during the summer months, falling again in September, with the usual recovery as the year closed.

An interesting table shows the number of employees grouped according to weekly wage rates. The most common rate for adult males was between \$30 and \$35, the number receiving this scale being given as 2,353 out of a total of 16,190 male adults employed; 804 male adults were in the group \$14-\$15; 815 received \$22-23; 912 received \$25-\$26; 1,700 received \$35-\$40; 1,276 received \$40-45; 596 received \$45-\$50; and 1,419 received over \$50. Of the 2,090 adult female employees 234 were in the group \$12-\$13; 214 in the group \$15-\$16, fewer employees being shown in the groups having the higher rates. A table of weekly hours of labour shows that 48 hours was the prevailing time worked, though large numbers worked a 44-hour week and many up to 60 hours or over. Out of the 785 firms which sent in reports to the Bureau 707 operated throughout the year.

Factories Act.—Under the provisions of the Factories Act a total of 2,986 inspections were made of 2,772 factories, shops, offices and office buildings, in which 19,110 employees were engaged. This was a reduction from 1923 in the number of inspection visits but represents a material increase in the number of places visited. During the year 294 recommendations relative to safety, health, hours and wages and the employment of children were made, eight of which had not been fully carried out at the end of the year. Additional to this 390 inspections were made of 374 elevators, and 147 recommendations were made relative to safety in their operation. The recommendations relating to "Safety" refer to the guarding of machinery, stairways and openings and the providing of fire escapes and access thereto; those relating to "Health" covered sanitation, ventilation and lighting; those on "Hours and Wages" are recommendations made to enforce the observance of the provisions of Sections 24 and 26 of the Act; recommendations as to the "number of Children Employed" are those made where children under fifteen years of age were found to be employed, for discontinuance of such employment.

It may be recalled that Section 24 of the Factories Act provides that (1) no child shall

be employed in any factory, shop, office or office building; (2) No person shall be employed by any employer in any factory, shop, office or office building at a wage less than one dollar and fifty cents per shift, except in the case of apprentices who may be paid a wage of not less than one dollar per shift; provided that the employer shall, in case any apprentice leaves his service, give to such apprentice a certificate on a form to be furnished by the Minister, showing the length of time such apprentice has been employed in any particular line of work; (3) No woman, except by special permission of an inspector, in writing, shall be employed in any factory, shop, office or office building between the hours of eleven o'clock in the evening and seven o'clock in the following day.

Section 26 provides as follows:—

"(1) The hours of labour for any person in any one day working day shift shall not be earlier than seven o'clock in the forenoon or later than six o'clock in the afternoon, and the hours of labour for any such person working night shift shall not exceed eight hours. (2) No person shall be employed for more than one shift in one day, but the inspector may permit employment for a longer period for reason of trade accident or other necessity. (3) No employee who has been previously, on any day employed within any factory or shop for the number of hours permitted by this Act shall, to the knowledge of an employer, be employed on the same day in any other factory or shop, and no such person who has been so employed in a factory or shop for less than eight hours shall be employed in any other factory or shop on the same day for a longer period than will complete such number of hours. (4) The employer shall allow every employee not less than one hour between eleven and two o'clock of each day for meals."

Minimum Wages.—Under the provisions of the Minimum Wage Act a total of 2,271 inspections were made of 2,044 businesses; 153 orders were made for employers to adjust wages and hours. Five prosecutions were instituted for violations of the provisions of the orders during the year, one of which was dismissed by the magistrate. An appeal was taken from one decision on the ground that the Act was *ultra vires*, and that the employer did not disobey as he had no knowledge of the order alleged to be violated. The appeal was allowed. Some account of the proceedings in connection with this case was given in the issues of the LABOUR GAZETTE for October and December, 1924. In consequence of the decision of the Supreme Court of the Province, the Provincial Legislature, at its recent session, re-enacted the Minimum Wage Act with certain amendments (LABOUR GAZETTE, June, 1925).

During the past year joint conferences were held at Calgary and Edmonton for the purpose of giving consideration to questions relating to overtime for emergencies and seasonal occupation. The Board decided that no gen-

eral decision should be made in regard to these matters, but that each application should be considered on its merits. Eight requests were received for permission to work overtime from individual firms. These requests were due to seasonal trade, stock-taking, and banquets. Additional to these, a general request was received from the retail merchants of Calgary, Edmonton, and Medicine Hat, for permission to work their employees additional hours during Christmas rush. Permission was granted in each case, conditional upon such overtime being paid for at not less than the regular rates. Requests were received for handicapped rates to be fixed in regard to eight employees. Special rates were fixed in three of these cases, two being refused, and three held over for further information. Three requests were received for permission to employ a greater number of apprentices than is permitted by the regulations, on account of there being a shortage of experienced help. Two of these requests were granted and one refused.

Employment Service.—The number of positions filled by the provincial employment service decreased from the previous year chiefly owing to the difference in the requirements for harvesting, but there was also a slight decline in the demand of industry for workers. The information in this section of the report has been already covered in this GAZETTE in the reports of the Employment Service of Canada.

Training in Fishing Industry

At the annual convention of the Canadian Fisheries Association, held at Halifax, Nova Scotia, in July, the president, Mr. J. A. Paulhus, spoke of the importance of the fishing industry in Canada, which yielded \$50,000,000 annually and gave employment to nearly 100,000 people. The *Canadian Fisherman* in a recent issue reported that an advisory committee for the fishing industry has been formed at Halifax, composed of practical fishermen and of members of Dalhousie University and the Nova Scotia Technical College. Subcommittees have been formed on fish smoking and refrigeration. As a preliminary stage in this work, a temporary staff of workers has been employed for the summer months, which form the most important period, and during which university men are available. These workers, present and in immediate prospect, being specialists, are of diverse origin. They come from Nova Scotia, New Brunswick, Ontario, British Columbia, Newfoundland, Switzerland, and South Africa. In training these the following universities have shared:—Dalhousie, New Brunswick, McGill, Queens, Toronto, Saskatchewan, British Columbia, Boston, Oxford and London.

NEW REGULATIONS UNDER BRITISH COLUMBIA HOURS OF WORK ACT, 1923

THE Board of Adjustment under the British Columbia Hours of Work Act of 1923 has recently made four regulations in addition to Regulations 1 to 18 which were reprinted in the April issue of this GAZETTE. Further exemptions are permitted from the general rule requiring the observance of a working day of eight hours. The new regulations are as follows:—

19. In the manufacture of carbonated beverages all persons employed in the capacity of delivery salesmen shall be permitted to work during the months of May, June, July, August and until September 15, 1925, such hours in excess of the hours prescribed in section 3 of the Act as may be necessary to meet exigencies of the trade.

20. All persons employed in the lithographing industry

shall be permitted to work during the months of May, June, July, August, September and October, 1925, such hours in excess of the limit of hours prescribed in section 3 of the Act, as may from time to time be necessary to fill urgent orders. This exemption is to be used only when sufficient competent help is not available.

21. All persons employed in the sawmills of the Pacific Mills Limited, operating in connection with the Pulp and Paper plant at Ocean Falls, shall be permitted to work twenty (20) hours per month in excess of the hours prescribed in section 3 of the Act.

22. In any week in the year on which a public holiday (other than Sunday) occurs all persons employed in laundries shall be permitted to work on the remaining working days of the week such hours in excess of the limit of hours of work prescribed in section 3 of the Act as may be necessary to avoid serious interference with the business of the industry, but the total hours worked in any such week shall not exceed forty-eight.

MINIMUM WAGES FOR WOMEN IN BRITISH COLUMBIA IN 1924

THE report of the Minimum Wage Board for the calendar year 1924, which is included in the annual report of the provincial Department of Labour for the same period, contains valuable statistics of the employment of female labour in the province. As the Board is under the provincial Department of Labour it benefits by the provision of the Department of Labour Act authorizing the department to require employers to furnish statistical returns. The report therefore contains figures compiled from these annual returns, which were furnished by employers of female help in the province for the week ending November 29, 1924, this being the week of greatest employment in the seasonal occupations. The figures are arranged in tables for each of the nine industries that

are covered by orders of the Board. Returns for 1924 were received from 2,287 firms, this being 92 in advance of the 1923 total. A gain is also recorded in the number of employees reported from 10,863 in 1923 to 11,597 in 1924. It must be remembered that the Minimum Wage Act does not apply to domestic servants, fruit-pickers, and farm-labourers. If these classes came under the jurisdiction of the Minimum Wage Board the total of women gainfully employed would be considerably higher.

In addition to the tables for the individual industries there is also a summary table combining the figures for the nine occupations whose wages are regulated by the Board, as follows:—

	1924	1923	1922	1921	1920
Number of firms reporting.....	2,287	2,195	2,135	1,923	1,939
Number of employees—					
Over 18 years, or experienced.....	10,355	9,612	8,989	8,592	8,481
Under 18 years, or inexperienced.....	1,242	1,251	1,242	1,130	1,328
Total weekly wages—					
Employees over 18 years, or experienced.....	\$176,517 87	\$164,712 57	\$152,890 94	\$147,084 68	\$147,247 01
Employees under 18 years, or inexperienced.....	12,644 50	12,511 50	12,546 50	11,671 10	15,439 50
Average weekly wages—					
Employees over 18 years, or experienced.....	17 05	17 14	17 00	17 12	17 36
Employees under 18 years, or inexperienced.....	10 18	10 00	10 10	10 33	11 62
Percentage of employees under 18 years, or inexperienced.....	10.71	11.52	12.14	11.63	13.54
Average hours worked per week.....	43.09	43.31	43.28	42.96	43.62

The total weekly payroll amounted to \$189,162.37, as against \$177,224.07 in the previous year. The weekly average of \$17.05 for the adult workers was a decrease by nine cents from the weekly average in 1923. On

the other hand the weekly average of wages earned by young girls rose from \$10 to \$10.18.

In mercantile occupations the largest group of employees received wages ranging from \$12 to \$13, and the second largest group re-

ceived from \$15 to \$16 (the minimum wage for experienced adults in this occupation is \$12.75). The percentage in this occupation of employees under 18 years dropped from 15.4 in 1923 to 13.83 in 1924.

In the laundry industry the weekly wages of adult women averaged \$14.17, the minimum wage for this class being \$13.50. The most usual working period is 46 hours per week.

Public housekeeping is stated to be, with the exception of the highly seasonal occupations, that in which the temptation to longest working hours is strongest, and the Board had to institute police proceedings in some cases to check this tendency. The legal minimum in this group is \$14 for experienced adults and \$12 for younger girls, the actual averages for these two classes being \$16.33 and \$14.90 respectively.

More female employees are engaged in clerical work than in any other calling over which the Board has jurisdiction. The weekly average wage is much higher than in any other steady occupation, standing at \$19.56 (the minimum rate is \$15). About 12 per cent of the office workers draw \$25 in wages.

In the personal service group, the experienced adults averaged \$15.95 (minimum rate \$14.25), and young girls \$10.89 weekly. Ushers are included in this category, and as their hours are much broken the average working week in this group is shorter than in any other occupation, namely, 38.14 hours.

The fishing industry has the highest minimum rate in any industry in the province, namely \$15.50, but the order does not apply to canning, the scope being limited to other occupations such as salting, smoking, etc. The weekly average for this group was \$17.59.

In the telephone and telegraph group the minimum rate for experienced adults is \$15 for a 48-hour week. The provincial average was \$17.83, and \$11.72 for those whose training was not sufficient to entitle them to the full rate.

The fruit and vegetable industry is largely centred around the Okanagan Valley. The actual pickers of fruit are not included in the figures, as they and their employers are specifically exempted from the provisions of the Minimum Wage Act. Most of the girls are engaged in work in and around the packing-houses and canneries. In many branches of this industry piece-work is customary, and in some establishments no record is kept of actual hours worked by each piece-worker. For a 48-hour week the minimum wage is \$14 for experienced workers, with slightly ad-

vanced rates when additional hours must be put in to take care of the fruit which cannot be handled in a normal working day. Experienced time-workers and piece-workers for the entire province averaged \$15.76 and \$19.74 a week respectively. The percentage of inexperienced workers in this group was 19.54, and the average working week was one of 43.29 hours.

In the manufacturing group the minimum rate for experienced employees, whether on a time-rate or piece-rate basis, is \$14 for a week of 48 hours. The actual average was \$16.25 in 1924. The percentage of inexperienced employees dropped from 18.36 in 1923 to 14.73 in 1924. The working week in this group averaged 43.65.

Labour Turnover.—A table in the report showing the labour turnover in each group discloses that office workers remain with their employers longer than those in other occupations, while public housekeeping employees change their positions most frequently. As a general rule it is noticed that the length of training required for a particular line of work has a distinct bearing on the time the employee will hold her position. An occupation that requires little or no time in which to acquire proficiency usually carries with it a frequent labour turnover.

Problem of Training Schools.—The report calls attention to the problem raised by so-called schools which profess to teach some industry and pay no wages, or even make a charge for instruction. "If wage-earners are paid lower sums than the legal minimum to which they are entitled the Board may proceed against the offending employers in the police courts, and the employees themselves may recover in the civil courts the difference between what they were paid and what they should have received. But when girls are induced to pay fees, in some cases amounting to \$75 or \$100, for the privilege of learning some occupation, even though the instruction is indifferent or worthless, and the employers are being paid by their customers for the services of the 'pupils,' the Board is helpless. The courts having decided that such girls are not employees in the legal sense, since they are not in receipt of wages and are therefore not technically employed, the Board has no power to obtain redress for them."

The Board points out that information given by employees is strictly confidential, and states that it is inadvisable for an employee to wait for discharge before registering a complaint.

ANNUAL REPORT ON COAL MINING IN ALBERTA IN 1924

THE annual report of the chief inspector of mines of Alberta for 1924, recently published, contains full statistical information on coal and shale mining in the province, including production, employment, wages, accidents, licensing of miners, etc. During the year 1924 the production of coal in the province was 1,663,210 tons less than the amount produced during the year 1923 which was the year of highest production, namely, 6,866,923 tons. The greatest loss was in the output from the bituminous mines; the largest monthly production was during the month of January, when 919,360 tons were produced.

Production.—The total amount of coal produced in the Province during the year was 5,203,713 tons, of which 1,431,327 tons were sold for consumption in the Province of Alberta; 1,830,906 tons in other provinces in Canada; 39,142 tons for consumption in the United States; 1,613,574 tons were sold to railroad companies; 195,420 tons were used under colliery boilers; 4,618 tons were used by colliery railroads; 70,104 tons were put to stock, and 64,559 tons were put on the waste heap. Of the total amount disposed of 45,277 tons were lifted from stock and 660 tons were lifted from the waste heap.

Of the coal produced during the year 3,096,660 tons was domestic coal from 342 mines; 1,515,107 tons was bituminous coal from 18 mines; and 591,946 was sub-bituminous coal from 39 mines. No production of anthracite coal, briquettes, or coke, was reported during the year.

Drumheller district was the largest producer of domestic coal, followed in order of importance by Lethbridge, Clover Bar, Wayne, Edmonton, Rosedale, Pembina, Tofield, Cardiff and Carbon and less active districts.

The main supply of bituminous coal came from Crow's Nest Pass, the other producers of this class of coal being at Mountain Park, Brazeau, Canmore and Jasper Park.

Sub-bituminous coal came mainly from Yellowhead, with smaller supplies from Saunders, Pincher Creek, High River, and Calgary.

The mines producing domestic coal are numerous but small, 285 mines producing less than 10,000 tons a year, while only 4 produced over 100,000. On the other hand one bituminous and one sub-bituminous mine produced over 200,000 tons, and seven bituminous mines produced over 100,000 tons.

Employment.—The number of employees above and below ground on December 31, 1924, was 9,055, the average for the year being 5,299;

while the number employed above ground on the same date was 3,006, the yearly average being 2,018. The occupations of the employees below ground on December 31 were as shewn in the following table:—

Occupations	Domestic	Sub-bituminous	Bituminous
Officials.....	265	27	139
Handcutters.....	1,343	150	1,373
Machine-cutters.....	492	33
Machine loaders.....	2,494	134
Horse haulage.....	641	20	195
Mechanical haulage.....	129	17	182
Ventilation.....	52	3	46
Roadmakers.....	164	8	50

Carpenters.....	31	18	36
Other mechanics.....	53	16	59
All other employees.....	458	212	340
Surface haulage.....	34	4	39
Total above ground.....	1,639	432	932

The average number of days during the year in which domestic coal was drawn was 150.76; sub-bituminous coal was drawn on an average of 194.35, and bituminous coal on an average of 225.51 days.

The average hours worked per week ranged from 22.26 hours in July to 38.40 hours in November, being at a low level from February to August.

Wages.—The report contains the general schedule of wages as paid at December 31, 1921. This schedule was given in the LABOUR GAZETTE for November 1924, pages 936-937. Details of more recent wage agreements in the coal industry in Alberta were given in the issues for May and June, 1925.

Per capita production.—The per capita production of all coal mines in the province in 1924 was 711 tons. According to the class of coal produced, the tons mined per employee was 681 in the domestic field; in the sub-bituminous field it was 1,752 tons in the strip-

ping pits, and 565 tons below ground; and in the bituminous field it was 698 tons. It may be noted that in the period covered by these statistics, the *per capita* production in 1924 was only exceeded in 1920, when it reached 712 tons. The "stripping pits" for non-bituminous coal are surface workings in which coal is taken out by steam shovels, production being at a much higher rate than below ground.

Accidents.—The total number of fatalities in the mines during the year is given as 21, besides 42 serious and 40 slight accidents. Three of the accidents which occurred during the year caused the loss of more than one life each, of these the most serious was the explosion on August 2, in the mine operated by the Midland Collieries, Limited in which the overman and two other men lost their lives. Two men were killed by a fall of coal from the face of the stripping pit at the mine operated by the Sterling Collieries, Limited, at Sterco, and two men were killed by a fall of rock while working an electrically operated coal cutting machine in the mine operated by the Alberta Block Coal Company, Limited, Drumheller. An ignition of gas occurred in the mine operated by the Foothills Collieries Limited at Foothills, in which the manager and examiner were severely burned. This was caused through an open light coming in contact with a body of gas. An ignition of gas from open lights also occurred in a mine in the Lethbridge District, two men being

severely burned, one of whom died two days after, and, as a result, these mines were required to install and use safety lamps only. All mines in the Lethbridge District are now being required to be inspected before the commencement of work by locked flame type safety lamps.

Prosecutions.—There were 43 prosecutions instituted for contraventions of provisions of The Mines Act, a conviction being obtained in each case; of those prosecuted, 24 were operators, 11 officials, 7 miners and 1 driver.

Issue of Certificates.—There were issued during the year 270 provisional certificates. These certificates are given to persons to act as overmen at mines which employ not more than ten men, if the person to whom the certificate is granted is the holder of a third-class certificate, and as overmen at mines which employ not more than five men, if he is not the holder of a third-class certificate. There is also a proviso that all shots fired in the mine shall be fired by the person holding the certificate.

The report contains the examination papers set under the Mines Act for first and second class certificates and certificates for mine surveyors a list of the names of certificate holders being appended.

The report also contains a directory to the industry giving lists of officials and other particulars concerning each mining company in the Province, a list of mines opened, abandoned, and re-opened during the year, etc

REGULATIONS FOR THE SANITARY CONDITION OF LUMBER, MINING AND OTHER CAMPS IN MANITOBA

THE Provincial Board of Health of Manitoba has recently issued a series of regulations for the sanitary control of lumber, woodcutting and timber camps, and for construction, threshing and other camps. The regulations are issued under the Public Health Act (Revised Statutes of 1913, chapter 159), which enables the Board to make regulations to ensure sanitary conditions in "lumbering, woodcutting, mining, construction, threshing and other camps." (The LABOUR GAZETTE for May, 1924, outlined similar regulations in regard to camps in the Province of Quebec.)

Lumber Camps

Employers establishing lumber camps are required at once to notify the Board that they have done so, and before the commencement of each season's work to furnish a list of proposed camps and their location, names of foremen, number of employees, name of responsible

physician, and whether a permanent hospital is provided in the camp or district.

Regulations 2 and 3, relating to the provision of medical supervision and the deduction that may be made from the wages of employees for this purpose, are as follows:—

2. Every employer of labour, on any work referred to in the preceding section, shall contract with a legally qualified physician for the sanitary supervision and inspection of all camps, works or premises under his control. The contract shall provide for inspection at least once a month or as often as required by the Provincial Board, and shall state plainly the amount of fee or remuneration to be paid by the employer to the physician. The physician under contract shall forthwith report in writing to the Provincial Board the result of his inspection. The report shall include (1) the type or plan of camp in use, whether of Class "A," "B," or "C" or a combination of these as set out in these Regulations. (2) A description of the location or site with the distance clearly indicated between the camp and any adjacent water such as a river, stream or lake, (3) the condition of the various buildings in the camp, (4) the water supply and drainage, (5) a plan of the camp showing relation of any adjacent water.

In case of dispute between the physician and the company as to the fee herein referred to the amount of fee shall be settled by the Provincial Board, whose decision shall be final.

3. Every employer of labour in a lumber camp or works, as set out in section 1, may contract with one or more legally qualified physicians for the medical and surgical care of his employees and for the payment of such services may deduct from the pay due any employee a sum not exceeding \$1 per month. This sum shall be paid to the physician or physicians so contracted with, without rebate or deduction. Every such physician shall supply medical attendance and medicine to the employees. Every employer who does not so contract for medical and surgical services shall be responsible for the medical and hospital care as well as for the maintenance of each and every employee taken ill while in his employ. He shall incur alike responsibility for each and every case of sickness which develops in an employee after quitting his service, or after being discharged from his employ when, in the opinion of the Provincial Board, the origin of such sickness is traceable to the period of such employment, or to an accident to an employee occurring while in his employ, when the sick or injured person is unable to pay, or does not pay, for the same. The apportionment and adjustment of the payment of expenses so incurred shall be determined by the Provincial Board, whose decision shall be final.

After a contract is made between an employer and a physician, the physician may not be dismissed by the employer without the approval of the Provincial Board. Should it appear to the Board that the physician is not fulfilling his contract the contract may be cancelled by the Board and the employer required to make a new contract with some other legally qualified physician.

Employers are further required before beginning work to forward to the Board copies of the contract signed by both parties covering the sanitary supervision of camps, etc. Notice must be given of any subsequent change of physician. The regulation proceeds:—

Should it appear to the Provincial Board that owing to the distance of the residence of the physician employed from the camps the best interests of the employees are not likely to be served it shall be competent for the said Board to require the employer of labour to contract with some physician residing at or near the works of the employer. Should it at any time appear, owing to the distance of physician from the camps, or to neglect or other cause on the part of the employer or physician employed, that an employee has been put to expense to secure medical assistance for sickness or accident other than employer's physician, the employer and physician shall be held responsible for the payment of a reasonable fee for such services. The amount to be paid in such instances shall be determined by the Provincial Board, whose decision shall be final.

Every measure required under the Public Health Act of the province to be taken by local health officers must be taken by those concerned where any unsanitary conditions or communicable disease exists, the employer, manager, foreman or doctor, being liable to the same penalties for neglect.

Other regulations require that the Board of Health is to be notified of any communicable

diseases; that employees are to furnish certificates of vaccination; that every employer is to provide an approved isolation hospital and one for sick or injured employees. The location of a camp must be made with due regard to its healthfulness, and camp may not be within 100 feet of water except with the written consent of the Board. As to construction, camps must contain 400 cubic feet of air space for each occupant, and be provided with a system of ventilation as specified.

Camps are classified into three groups according to their capacity, class A including those accommodating 100 men, class B for 50 men, and class C for 26 men. Standard plans are given for each type of camp. Class A camp is designed to meet the requirements of lumbermen desiring to use camps three years or over, and is also suitable as a depot or headquarters camp. Although designed to house 100 men, it is optional with the builder whether he house the total in one camp, or prefers to construct two camps as shown on plan "B." Some of the requirements are as follows:—

Ventilation.—There shall be three roof ventilators placed as shown in the plan. These shall have openings of at least twelve inches square and shall be equipped so that they may be opened and closed by a pull-cord. Fresh air inlets are to be constructed as shown in the plan. The fresh air inlets shall be protected at each end by a wire screen and shall not be less than six inches by six inches.

Bunks and Bedding.—The bunks shall be single double-deck bunks. These may be constructed of iron or of wood, but must be arranged in position as shown in plan "A" or plan "E." The former provides bunks parallel with the walls and the latter at right angles to the walls. Should the plan at right angles to the walls be preferred, a passageway of at least eighteen inches shall be provided between each pair of bunks. Each pair shall be further divided by partition of at least eighteen inches in height from the top of the bunk to prevent contact between occupants. Ticks or mattresses and clean blankets shall be furnished to each employee when entering camp.

Wash-room and Bunkhouse.—A wash-room with the number of basins as shown in the plan, shall be provided. Doors shall be hung at the entrance as in the case of the cooks' quarters.

Combination Camp.—This camp has been designed to meet the requirements of pulp and paper companies, who as a rule contract out small blocks of timber to jobbers. The jobbers operate for the most part with crews of from eight to fifteen men, with an average of ten. This class of jobber has in the past invariably brought his wife and family to the woods and has constructed small camps far below the average logging camp. In fact the buildings constructed by these jobbers have in the past been of the most unsanitary type; hence the necessity for the creation of a small standard building combining the best sanitary principles at the minimum cost. The number of men housed in this type of camp must not

exceed fifteen. Should the operator require a larger crew, then one of the other types or classes of camp shall be used. This small camp, constructed under one roof, is a small structure embodying most of the features to be found in the larger and more expensive camps at a minimum.

Any infringements of the regulations involve a penalty not less than \$5 or more than \$100 or in default imprisonment up to three months.

Mining, Construction, Threshing, and Other Camps

Employers are required to notify the Board of the establishment of camps, and to furnish

annually such information as may be required. They are required to contract with a physician for sanitary supervision as in the lumber camps. The regulations are also similar to those governing lumber camps in requiring copies of contracts covering sanitary conditions to be forwarded to the Board, and in permitting the employment of local physicians when they are within reach of the camps. The same rules also apply in respect to notification of communicable diseases, vaccination of employees, provision of hospitals, the sites of camps, air space, lighting and ventilation, laundries, disposal of refuse, latrines, stables, and the penalties for infringements of the regulations.

UNION LABOUR LIFE INSURANCE COMPANY

New Enterprise of American Federation of Labour

ORGANIZED labour is to enter the insurance field with a \$2,000,000 concern, to be known as the Union Labour Life Insurance Company. Representatives of nearly 40 national and international unions, at a conference in the American Federation of Labour Building, Washington, unanimously decided to form the company, which will be organized under the direction of Matthew Wöll. The conference was called by President William Green of the American Federation of Labour, to consider the report of an insurance committee appointed by the late Samuel Gompers. This committee, consisting of President Wöll of the International Photo-Engravers Union and President George W. Perkins of the Cigar-makers International Union, was appointed by Mr. Gompers at the Portland convention of the American Federation of Labour in 1923. The committee submitted an exhaustive report at the El Paso convention in 1924 and the convention authorized the calling of a conference to act on the committee's recommendations. The report of the committee was discussed at length and authorization for the formation of the Union Labour Life Insurance Company followed. An organization committee of about 25 persons prominently identified with the labour movement will be formed by Mr. Wöll as chairman and Mr. Perkins as secretary.

Compelling reasons for the formation of the insurance company by union labour were given in the insurance committee's report, which charges the existing companies, particularly those writing what is known as group insurance, with discrimination against labour unions

to the extent of \$2 per thousand for insurance issued to the unions over the price charged non-union groups. The report also arraigned the companies for the excessive cost of what is known as industrial insurance patronized almost exclusively by wage-earners and with extravagances in the conduct of their business. The report said that the Union Labour Life Insurance Company hopes by the elimination of unnecessary expense, due very largely to the excessive cost of weekly collections on industrial policies, to point the way and even to compel a general reduction of premium rates charged for this class of insurance by the public companies.

Discussing group insurance, Mr. Wöll said that those using it were often opposed to trade unionism and that in some states insurance companies were not permitted to write insurance for trade unions. Insurance companies discouraged this until the American Federation of Labour took up the matter, said Mr. Wöll, who went on to say that insurance companies are now approaching the unions for permission to underwrite all the members. There is danger in this, he said, as every member's name and address and other information must be given to the insurance companies. "If we enter the insurance field we meet the scheme of the employers in a practical way. Where the employer furnishes insurance of \$1,000 to each of his employees we are faced with difficulties. The employee will not be as militant as if there were no insurance. It is therefore necessary that we enter the insurance field so that the trade unions will not be weakened."

The company will issue only participating policies of the usual kinds. Both men and women will be accepted as policy holders at the usual rates charged by the public companies. The company will be formed without organization expense. No commission will be paid for stock and no fiscal agency employed. The members of the organization committee will serve without pay.

In an interview Chairman Wöll said that it was not the intention of the new company to compete with the public companies by offering its policies at less rates of premium, but rather to utilize existing machinery of the local and na-

tional unions for the purposes of writing the insurance and collecting the premiums at as little expense and careful attention to detail. A saving will result for the policy-holders which will be returned to them in the form of dividends to apply upon subsequent premiums. He also stated that the objective of the company was to insure every member of organized labour and their families adequately as soon as it can possibly be done. This means an army of nearly 12 million policy-holders which the company expects to write for an average of \$1,000 each within the next five years.

LABOUR LEGISLATION IN THE UNITED STATES IN 1925

A SUMMARY of the labour measures enacted by the State Legislatures in the United States during 1925 has been published by the National Industrial Council. The report says that so far as industrial legislation was concerned the 1925 State sessions witnessed the introduction of a fair although less than usual number of drastic proposals. Enactments on such matters as workmen's compensation, hours of labour, minimum wages and maximum hours for women, old-age pensions, labour unions, etc., are missing this year, owing, it is claimed, to the campaigns of opposition conducted by the various State manufacturers' associations represented on the Advisory Committee of the Council.

Some of the enactments in the various states were as follows:—

California.—A statute providing payment by the state of old age pensions to needy, aged citizens.

An Act requiring employers in help-wanted advertisements to state that a strike is "anticipated" when such is the case.

Idaho.—An amendment to the Act defining and punishing criminal syndicalism.

Illinois.—An Act providing that: "No restraining order or injunction shall be granted by any court of this state, or by a judge or the judges thereof, in any case involving or growing out of a dispute concerning terms or conditions of employment, enjoining or restraining any person or persons, either singly or in concert, from terminating any relation of employment, or from ceasing to perform any work or labour, or from (peacefully and without threats or intimidation) recommend-

ing, advising, or persuading others so to do; or from being upon any public street, or thoroughfare or highway for the purpose of (peacefully and without threats or intimidation) obtaining or communicating information, or to (peacefully and without threats or intimidation) persuade any person or persons to work or to abstain from working, or to employ or to cease to employ any party to a labour dispute or to (peacefully and without threats or intimidation) recommend, advise, or persuade others so to do."

Missouri.—A workmen's compensation insurance Act advocated by employers and trade unionists.

New Jersey.—An Act providing for jury trial upon charges of contempt for violation of injunctions issued in labour disputes.

An Act requiring every factory engaging in any productive industry to register with the State Labour Commissioner, and to furnish the Commissioner with a statement of the maximum number of persons employed and other data.

An Act authorizing appointment of a commission composed of legislators to investigate working conditions among women in New Jersey and to report upon the necessary costs of living and the wages to maintain women in health and in reasonable comfort.

Pennsylvania.—A measure authorizing appointment of a State Commission for the further study of old age pensions and appropriating \$20,000 therefor, and a measure proposing a constitutional amendment to permit old age pension legislation.

UNEMPLOYMENT INSURANCE IN THE CHICAGO MEN'S CLOTHING INDUSTRY

THE Unemployment Insurance Fund of the Chicago Men's Clothing Industry completed two years of operation on April 30, 1925. (References to this undertaking were made in the *LABOUR GAZETTE* for July, 1923, and a similar scheme for garment workers in New York was noted in the issue for September 1924). The establishment of an unemployment insurance plan was the subject of negotiations between the Chicago clothing manufacturers and the Amalgamated Clothing Workers of America at various times after 1919, and in the trade agreement of 1922 it was provided that the subject of employment might be raised in negotiations annually on a par with wages and hours.

A preliminary agreement providing for an unemployment insurance scheme in broad outline was adopted as of May 1, 1923, and some months later a final legal document which provided for the scheme in complete detail was accepted by both parties. The terms of the final document and the rules since agreed upon may be summarized as follows:—

(1) *Contributions*.—Beginning 1 May, 1923, the employer shall deduct 1.5 per cent of the weekly earnings of each member of the Union in his employ and shall forward to the Trustees weekly the money so deducted, together with an equal amount contributed by himself.

(2) *Waiting Period*.—(a) For workers on short time, the waiting period in each season shall be 44 hours. (b) For workers on layoff, the waiting period in each season shall be 44 hours after registering at the Employment Exchange.

(3) *Unemployment*.—(a) Time on layoff in excess of the waiting period shall be counted as unemployment. (b) Short time in excess of four hours in any week, after allowing for the waiting period, shall be counted as unemployment on the same basis as time on layoff. (c) Every hour of overtime shall offset one hour of unemployment.

(4) *Amount of Benefit*.—(a) Benefit shall be 40 per cent of full-time wages with \$20 per week as a maximum, beginning 1 May, 1924. (b) Not more than two and one-half weeks' benefit shall be paid in either of the two seasons May-October and November-April. (c) A worker on short time shall not be credited in any week with wages and benefit in excess of \$50. (d) Benefits in any insurance year shall not exceed one week of benefit for every ten weeks on payroll.

(5) *Eligibility for Benefit*.—To be eligible for unemployment benefit, a worker: (a) must have been a member of the Union in good standing for one year; (b) must have contributed regularly during his employment; (c) must be unemployed because of lack of work; (d) must be registered at the Employment Exchange, if wholly unemployed, and must not have declined to accept suitable employment; (e) must not have exhausted his right to benefit.

(6) *Distribution of Benefits*.—(a) Full-time benefits shall be distributed by the Employment Exchange. (b) Distribution of short-time benefits shall be arranged by the Amalgamated Trust and Savings Bank.

(7) *Transfers*.—(a) When a worker is employed temporarily, his contribution shall be transferred to the

fund of the firm that employs him permanently. (b) When a worker is separated permanently from any firm, he shall forfeit all claim upon the fund of that firm, but shall share equally with the other employees in the fund of the firm that next gives him permanent employment.

(8) *Special Rules for Temporary Cutters*.—The insurance contributions of temporary cutters shall be set aside as an unemployment fund for temporary cutters. Cutters shall receive 33½ per cent of their weekly wages as benefit instead of 40 per cent and the saving so effected shall be part of the temporary cutters' fund. Permanent cutters shall be limited to five weeks' benefit in the year and temporary cutters to ten weeks' benefit.

(9) *Limitation on Size of the Fund*.—The unemployment fund of any firm shall not be permitted to accumulate beyond an amount equal to the total maximum benefits payable during a period of two years. When it reaches that amount, contributions shall cease on both sides and shall be revived only when the fund is reduced to an amount less than the total maximum benefits payable during a period of one year.

The scheme is under the direction of trustees representing the two sides with an impartial chairman. There are five boards of trustees, one for Hart Schaffner & Marx, one for the House of Kuppenheimer, one for the remaining large concerns, one for the non-association houses and one for the contractors. The contributions from the contractors and their employees are pooled in one fund, but the contributions from all other employers are kept separate in individual house funds. The result is the pooling of the contributions from about 150 small contracting establishments and separate house funds for about 100 of the larger concerns. For the unpooled firms there are theoretically as many boards of trustees as there are employers, but this difficulty is overcome by the firms agreeing upon the same trustees and by the trustees legislating for all firms at the same time unless they otherwise indicate. Co-ordination of the various trustee boards is secured through the chairman who acts for all the boards. Professor John R. Commons of the University of Wisconsin who acted as Chairman during the first two years resigned on May 1, 1924 and Dr. B. M. Squires, Chairman of the Trade Board of the Chicago Men's Clothing Industry, was appointed to the position.

The employer representatives on the various trustee boards are as follows: On the Hart Schaffner & Marx Board—Milton A. Strauss and Dr. Earl Dean Howard; on the B. Kuppenheimer & Co. Board—Alfred W. Stern and Dr. A. J. Todd; on the board for the remaining association firms—Dr. Willard E. Hotchkiss, Alfred Decker and P. A. Grossman; on the contractors Board—Louis Adel-

man and M. R. Johnson. The Amalgamated Clothing Workers trustees acting on various boards are Sidney Hillman, Samuel Levin, Frank Rosenblum, A. D. Marimpietri, Sidney Rissman and Bryce M. Stewart.

In view of the difficulty of securing agreement upon trustees among the non-association firms, their funds have been administered by the chairman in conformity with the procedure of the other boards.

The trustees are charged with making administrative rules, receiving contributions, and distributing benefits. The funds are placed under the control of the trustees, and the employers and the Union lose all interest in them. In the event of disruption of relations between the two sides or the liquidation of a firm the trustees are required to distribute the funds as unemployment benefit to unemployed members of the Union in Chicago within a period of five years.

The five trustee boards established a central unemployment insurance office to carry on the work of administration, but as the negotiations on the final agreement were not completed until the early autumn of 1923, the insurance office was not able to begin work until November. As the firms had been collecting contributions from their employees and set these aside with their own contributions from May 1, the office had a considerable amount of back work to overtake and as it had no precedents to guide it, much experimental work was unavoidable. The administration work was divided into three divisions—records, benefits and accounts.

Records Division.—Every firm in the market forwards weekly to the insurance office a report of the hours worked, the earnings of each employee, and the insurance contributions deducted from the employee's pay. The report is accompanied by a check to cover the contributions of the firm and its workers. The large firms employing more than half of the employees on the market loan their actual payrolls to the insurance office one day in the week avoiding the labour of preparing a special report. The information thus received is posted to individual records maintained for every employee in the industry so that the office can tell at any time how much unemployment any employee has experienced.

The Union maintains an employment exchange which is an integral part of the scheme. At the request of the trustees, the exchange forwards to the insurance office daily reports of the workers registered for employment with the reason for their being out of work. The exchange also reports on all workers assigned

to employment. These data are also posted on the workers' employment records and the two sources of information afford the trustees an accurate, impartial and complete employment history of each worker.

Benefits Division.—The benefits division decides whether a worker is eligible for benefit and issues the benefit checks. The employment records of the workers are scanned by shops periodically and when it is evident that the majority of the employees in the shop have lost the maximum amount of compensable unemployment for the season the checks are prepared with due regard to the various rules. Two carbon copies of each check are made. The original check is sent to the worker, the duplicate to the employer so that he may know by what amount his unemployment fund is being depleted and the triplicate serves for accounting purposes. The workers on part time receive their checks in the shops where they are employed and those entirely out of work through the employment exchange of the Union.

Provision is made that workers who receive no checks or who are dissatisfied with the amount received may forward claims to the unemployment insurance office. Each claim is considered and reply promptly made, but if the worker is still dissatisfied he may appeal to the chairman of the Board of Trustees. Over 50,000 checks have been issued and only one appeal has been received by the chairman and this he dismissed as the worker had been out of the city and unavailable for employment in the industry during the period he claimed benefit.

The chief difficulty experienced by the benefit division was that of finding some satisfactory means of identifying the workers. Because of the various nationalities represented, change of name through marriage and different ways of spelling names by different employers, the office frequently had two or more employment records for the same worker. At the beginning of the second season the insurance office after much effort established a local-ledger file which has proved an adequate solution of the problem. The worker is now identified for benefit purposes by the local-ledger number he carries in the Union rather than by his name. The worker's lost time is posted periodically from his time record to his local-ledger card and no matter how many time cards he may have by reason of confusion in name, he can have only one local-ledger record. The amounts and serial numbers of all benefit checks issued are also posted on the worker's local-ledger record.

Accounts Division.—The accounts division maintains the individual fund accounts for the various houses in the market and it charges each firm with the 3 per cent weekly contributions indicated on the reports and credits it with the cash contributions as received. It banks the moneys received daily and co-operates with the treasurers of the various boards in the investment of surplus funds in U.S. securities as provided by the agreement. This division also records the benefits paid on account of each firm, charges the firm with its share of the expense of administering the office and indicates the balance available in the fund.

The trustees maintain one central benefit account for the market from which all benefit payments are made except those to temporary cutters for whom a separate temporary cutter fund has been established. As funds are needed for benefit purposes the treasurer notifies the trustees concerned and they liquidate securities and transfer the proceeds to the benefit account.

Contributions began on May 1, 1923, and on April 30, 1925, they amounted to \$2,020,005.90. It was hoped to begin payment of benefits early in 1924 but after a satisfactory volume of employment during the period of the first six months' contributions, there was a marked shortage and contributions fell off to such an extent that payment of the first benefits had to be postponed until May 1, 1924. Employment is still slack and the drafts on the funds have been heavy. The benefits for the six months ended October 31, 1924 amounted to \$944,291 of which \$35,098 was paid to the temporary cutters and the balance of \$909,193 to the permanent workers in the industry.

In view of this heavy benefit expenditure in the first season the trustees agreed that for the second six months benefits should be allowed for a maximum of two weeks instead of two and one-half weeks as before. Accordingly benefits declined from \$944,291 for unemployment in the six months ended October 31, 1924 to \$665,338 for the six months ended April 30, 1925. Of this latter amount \$44,053 was paid to temporary cutters and \$621,285 to permanent employees. The total benefit expenditure in the first two seasons of benefit payments is, therefore, \$1,609,629 of which \$79,151 was distributed to temporary cutters and \$1,510,096 to permanent employees.

At first an effort was made to pay benefits monthly but this practice involved much expense and afforded but little advantage to the workers for in months of good employment

the payments were very small. The practice was, therefore, discontinued in favour of the present plan by which checks are not issued for a shop until the majority of the employees have lost the maximum amount of compensable unemployment for the season. Accordingly the number of checks issued in the first season, 41,795 does not indicate the number of workers benefited as under the present plan. In the six months ended April 30, 1925, 23,145 checks were issued to as many permanent employees and 3,144 checks to 625 temporary cutters, this latter class of workers receiving benefits weekly while unemployed.

The expense of organizing and operating the unemployment insurance office totalled \$125,000 April 30, and of this amount \$20,000 was expended on furniture and equipment, leaving \$105,000 as the operating expense for the first two years. This figure is approximately five per cent of the total receipts. Accordingly ninety-five cents of every dollar received is available for the payment of unemployment benefits. The unexpended balances of the various funds of the market totalled \$564,315 on April 30, 1925. On June 10, 1925, when the benefit checks for the second season were completed the unexpended balances totalled \$415,548.

It could scarcely be expected that any of the house funds would be able to accumulate reserves in a time of such marked slackness in the industry. However, a few firms in one branch of the trade have afforded fairly continuous employment during the past two years and if their present level of employment is maintained they will shortly be able to discontinue contributions under the provisions that when a fund has accumulated an amount sufficient for two years' benefits the firm and the workers may cease contributing until the fund has been depleted to an amount sufficient for one year's benefits when contributions must be resumed.

Statistics.—From the weekly payroll reports the insurance office compiles weekly the total wages, the total man hours and the number of employees on payroll for the different branches of the trade and for the market as a whole, information which, so far as is known, is not available for any other industry. It is already evident that these statistics will make possible more constructive effort for the diminution of unemployment in the industry as well as to afford a more scientific basis for the unemployment insurance scheme itself.

TRADES AND LABOUR CONGRESS OF CANADA

Summary of the Proceedings of the 41st Annual Convention

THE Forty-first annual convention of the Trades and Labour Congress of Canada was held in Ottawa from August 31 to September 4, the sessions being held in the concert hall of the Auditorium. Mr. J. A. P. Haydon, president of the Ottawa Allied Trades and Labour Association, presided over the opening session, and formally welcomed the delegates, the civic welcome being extended by the Mayor, J. P. Balharrie.

Following these formalities, the convention was addressed by the Hon. James Murdock, Minister of Labour. After first conveying his greetings and best wishes to the Congress, the Minister enumerated the various labour bodies that are functioning in the Dominion, and indicated the aims and claims of these organizations in the representations made to the Department of Labour—a Department which originated as a result of the recognition of the fact that labour had a right to have its interests safeguarded. "No Minister of Labour," he said, "has ever been able to please all who have been contending for certain things from the Department. No Minister ever will be able to do that." The Minister also outlined the numerical strength of the various labour organizations in Canada, and, in dealing with the railway brotherhoods, (referring particularly to those known as the "Big Four") he pointed out that the aims of these organizations were in line with those of the Trades and Labour Congress, and he believed that these railway organizations should be affiliated to the Congress. Just as other departments of the Government were organized to promote the interests of other branches of national life and endeavour, so he conceived it to be the duty of the Department of Labour "to see to it that labour gets a square deal." The Hon. Mr. Murdock declared that, though errors might be made, it was his policy and aim to so deal with the various questions before him as to ensure that labour would have its legitimate interests protected and advanced. In conclusion he said: "I wish for this Congress prosperity and advancement. Though I do at times disagree with the methods adopted by certain individuals in making that advancement, yet whether as Minister of Labour or as a humble member in a labour organization, I am first, last and always with you to secure those things to which labour is properly entitled."

Subsequently, during the session, the convention was addressed by the Prime Minister, the Right Hon. W. L. Mackenzie King, on behalf of the Federal Government, and by Mr. J. H. H. Ballantyne, Deputy Minister of Labour for Ontario, who represented the Ontario Government at the behest of the provincial premier, Hon. G. H. Ferguson.

Message of Prime Minister

The Prime Minister prefaced his remarks, by references to the British Trades Union Congress and the American Federation of Labour, both organizations being represented by fraternal delegates. He also expressed the appreciation of the Government to the Congress "for the manner in which your representatives have placed before us your problems." The reason for the inability of the Government to meet all the resolutions of the Congress was ascribed by the premier as being "due to the circumstance that the Government having to do with many problems has to deal with one problem at a time in the highest interests of all." The Prime Minister outlined the development of the labour movement in Canada during the last quarter of a century, and the creation and parallel growth of the Department of Labour. Referring to the activities and the services of the Department of Labour, the premier said: "The Department of Labour has been a great factor in the industrial, social and political life of our country. When I try to estimate the services of that Department, I try to ask myself what would have been the result if there had been no Department of Labour." The Prime Minister then defined his views of the industrial problem. Analysing its component parts he enumerated four factors which were essential to industry, these being: Labour, which supplied the physical force; Capital, which furnished the instruments of production; Directing Intelligence (distinct from Capital) which was the genius to make men work together; Organized Society, including all that is represented by Government. In dealing with the industrial problem, he contended that all four factors were entitled to the same consideration, and that all the trouble was caused by any of these factors attempting to control the other three or endeavouring to usurp the functions of the others. As a solution, the Prime Minister emphasized the importance of attitude. "Position, or attitude, in material things is the

secret of right relations," he declared, adding that "what position is in the material universe, attitude is in human relationships." His concluding thought was: "I believe a great gathering such as this does help to give expression to a point of view, and does help to create that right attitude toward industry."

Mr. J. H. H. Ballantyne, Deputy Minister of Labour of the Province of Ontario, stated that the prestige of the provincial Department of Labour in connection with labour matters was becoming more emphasized, and that events were beginning to demonstrate that association with the provincial legislatures would become more pronounced in the future. He considered that the criterion of a good organized labour movement is the kind and type of law on the statutes. In this respect, he stated that the Province of Ontario ranked high so far as labour legislation was concerned. Outlining the labour legislation in the Ontario statutes, and citing, among others, such enactments as the Workmen's Compensation Act and the Mothers' Allowance Act, he stated that probably the most beneficial piece of labour legislation in the province of Ontario was the Factory Act.

Presidential Address

Mr. Tom Moore, president of the Congress, replied to the addresses of welcome and then gave his presidential message. The Congress, he said, was representative of sixty different trades, and of all the chief industrial centres from Halifax to Victoria. "Therefore," he declared, "the voice of this convention is the voice of organized labour in Canada." Referring to the Minister of Labour's mention of the unanimity of aim existing between the Congress and the "Big Four" organizations of railway labour, President Moore stated that he did not know of a time when there was closer co-operation between the Railway Four and the Congress. "In all our objectives we have their distinct co-operation, and we co-operate with them," he said. Speaking of attempts to secure labour legislation, he stated, it had been his experience that requests, however mildly worded, but insistent and sincere, were far more effective than violently worded demands. Referring to the enemies of labour within the labour movement, and to attacks which had been made upon the responsible heads of organized labour, he issued this challenge: "When we read through certain publications, finding only words of character assassination, sowing discontent and disbelief, we have the right to repudiate them. I challenge that any act of mine or my colleagues or the Congress has been wilfully or know-

ingly taken against the labour movement as a whole." He also declared that at previous conventions delegates had been sent under sealed orders. Such action had proved futile, and if repeated at this convention, he trusted that such attempts would fail in their purpose. His plea for closer co-operation with the farm labourers of Canada was as follows: "There can be no permanent improvement in our conditions unless prosperity blesses the farm labourers of this country. Agricultural workers must have their conditions brought similar to ours. One of our duties is to so frame our requests and platform as to not antagonize the farm workers, and the future of labour demands united co-operation with the farmers of Canada." In concluding, President Moore asserted that "Labour had the right to live to enjoy the fruits of its own toil and the benefits of its inventive genius."

The first order of business was the appointing of the regular committees, the allocation of these duties being made by the president on the recommendation of the executive council. In addition, the appointments included the offices of assistant secretary, sergeant-at-arms and translator, whose services were necessitated by reason of the fact that the main business of the convention was conducted in both English and French. The chairman of the Resolutions Committee, J. W. Wilkinson, announced that about 20 resolutions had been received too late to comply with the constitutional requirement, which made it obligatory that resolutions submitted to Congress be received 20 days before the commencement of the annual convention. In many of these tardily submitted resolutions, the subject matter was already covered by the regularly presented ones, and the convention decided against considering the resolutions which had not been submitted within the prescribed time.

The report of the Credential Committee, presented by its chairman, J. T. Foster, indicated that credentials had been received for a total of 267 delegates, the representation being divided as follows: Fraternal delegates, 3; international organizations, which had affiliated the whole of their Canadian membership, 43 delegates; 17 trades and labour councils, 31 delegates; 127 local unions, 190 delegates.

Report of Secretary-Treasurer

The financial statement, which was submitted by the secretary-treasurer, Mr. P. M. Draper, showed that for the fiscal year the total receipts from all sources, including the balance from the previous year, were \$23,-

274.41, while the total expenditures amounted to \$20,938.34, leaving a balance of receipts over expenditures of \$2,336.07. There was also presented by the secretary-treasurer the report of the trustees of the Congress headquarters. This report indicated that the receipts for the year totalled \$1,545, and the expenditures were \$1,477.18, leaving a balance on hand of \$67.82. The membership on which *per capita* tax was paid to the Congress for the year was 105,912, a decrease of 11,148 members as compared with last year. Explaining this apparent decrease, the secretary-treasurer in his report stated that it was due to the policy of the Congress in exempting from *per capita* tax payment the membership of affiliated unions who were unemployed or involved in strikes. The Audit Committee, to whom this report was referred, subsequently found the accounts correct, and the report was adopted.

The convention adopted the report of the Committee on Ways and Means which recommended an appropriation of \$800 to defray the expenses of the fraternal delegate to the British Trades Union Congress, and also \$450 to cover the expenses of the fraternal delegate to the American Federation of Labour.

Report of the Executive Council

The report of the executive council detailed in its 49 pages the various matters upon which the administration took action. These activities extended into all phases of endeavour which affected organized labour in the Dominion. The report consisted of thirteen main divisions or sections, each section outlining the action taken by the executive in dealing with the subjects contained therein. There follows a synopsis of the executive council's report, together with the recommendations of the Committee on Officers' Reports to which the executive's report was referred. Practically all the recommendations of this committee, whose chairman was R. J. Tallon, were adopted by the convention.

Legislative Programme, 1925.—The subjects dealt with under this section included the legislative programme of the Congress, which was presented to the Dominion Government in an interview on January 31 (LABOUR GAZETTE, February, 1925, page 171). The committee commended the executive for its policy of presenting the legislative programme to the Government after consultation with the Canadian field officers of affiliated organizations.

Legislation.—This section contained a summary of legislation before Parliament during

the last session. The contents included legislation which was enacted, legislation which was not enacted and resolutions which were discussed. Particular reference was made to the Industrial Disputes Investigation Act amendments, the amendments to the Dominion Compensation Act, and (under resolutions introduced) to Senate reform and British North America Act amendments. The committee, in commenting on this section, drew attention to the nature of the bills passed, very few of which were considered to be in the interests of the workers. "The untiring efforts of the two Labour members with regard to legislation affecting the workers" were commended.

Affiliations and Advisory Councils.—Under this section, the executive enumerated the various organizations with which the Congress had maintained affiliation during the past year. These included the International Federation of Trade Unions, the Women's Trade Union League of America, the American Association for Labour Legislation, the Canadian Council on Child Welfare, and the League of Nations Society in Canada. Representatives of the Congress had also attended meetings of several other bodies, brief reports of their proceedings being given. The representative of labour on the Dominion Council of Health, Vice-President Bert Merson, gave a report on the work of this body in which the question of narcotic drug control was outlined, and the Congress went on record as favouring the absolute prohibition of drugs except for medical purposes.

International.—With reference to the death of Samuel Gompers, the report of the executive mentioned the action of the Congress in being officially represented at the funeral of the former head of the American Federation of Labour. The delegates in convention then honoured his memory by standing and observing silence. In dealing with the remainder of the executive's report, the committee expressed appreciation of the close co-operation existing between the Congress and the American Federation of Labour.

Education.—Under this heading was reviewed the progress made in workers' education with particular reference to the conferences between the officers of the Congress and the American Federation of Labour with a view to extending to Canadian workers educational services similar to those rendered to the affiliated organizations of the American Federation of Labour through the agency of the Workers' Educational Bureau. The committee concurred in the recommendation of

the report that the incoming executive be authorized to continue its negotiations with the American Federation of Labour in this matter.

Public Ownership.—Dealing with this topic, the executive drew attention to the long list of industrial undertakings in Canada which were now functioning as publicly owned utilities. In commenting on this fact, the committee "noted with satisfaction the progress being made in public ownership of utilities as being a vindication of the policy adopted by this congress in the past." The committee also recommended that the incoming executive continue in its efforts to secure representation on all governing bodies of such public utilities.

Eight Hour Day.—This section of the executive's report was productive of a lengthy discussion. The executive in its report had reviewed the eight hour day issue as submitted to the Supreme Court for a decision on the question of jurisdiction between the Dominion Parliament and the Provincial Legislatures. In conclusion, the executive's report stated that the decision of the Supreme Court, although unsatisfactory to organized labour, made clear as to where the respective legislative authority on the eight hour day question lay. Summarizing the situation, the executive council declared that "provincial legislatures must be looked to for the enactment of eight hour day legislation covering general and commercial undertakings, and legislation covering government employees and those engaged on public works for the Federal Government will have to be secured from the Federal Parliament." The executive then recommended—and the recommendation was subsequently endorsed by the committee and adopted by the convention—that "the incoming general executive, provincial executives, provincial federations of labour, and our entire affiliated membership exert every effort towards securing the adoption, throughout Canada, of the eight hour day and thus bring this country into line with European countries who already have legislation of this nature." In the discussion that ensued two opposite opinions were advanced as to the best method of securing this measure. One faction favoured "militant organization" as the basis for securing better conditions, one delegate declaring that "the trade union movement in its economical aspect is the strongest weapon to secure for itself those things to which it is entitled." On the other hand, it was argued that "experience was daily showing in the trade union move-

ment that it was in its best interests to appreciate the value of legislative enactment;" and that "the security of the eight hour day would be made more permanent if there is a law to that effect upon the statutes." It was also urged that organization and legislation were both necessary to the establishment of the eight hour day.

"Canadian Congress Journal."—With reference to the publication of the official journal of the Congress, the committee concurred in the recommendation of the executive in urging greater efforts towards ensuring the maintenance of the publication and the liquidation of its deficits.

British North America Act and Provincial Conference.—Considerable discussion took place over this section of the report, the executive's recommendation (in which the committee concurred) being adopted as follows:

"Your executive believes that the time has arrived when amendments to the British North America Act should be secured which would give greater authority to the Dominion Parliament and bring about more centralization of our laws which vitally affect the conditions of wage earners in this country, and that it is only by such a step that any essential social reform can be brought about and made equally applicable to all citizens of Canada."

The discussion covered nearly all phases of the question. Abolition of appeals to the Privy Council was advocated, the opinion being expressed that "the interests of this Dominion could be equally well served by an ultimate legal body in Canada." Another delegate stated that the Privy Council was not anxious to handle Canadian questions; that the obstacles to amendments to the B.N.A. Act did not lie in the hands of the Privy Council, "but that they are here in Canada and they are political." That the final objective sought "should not end short of complete self-government for the Dominion of Canada" was also advanced. The interests of the provinces were defended by another delegate, who urged "that any request which might come to the Federal Parliament should not be at the expense of the provinces."

Nova Scotia Mining Dispute.—Under this caption, the executive's report dealt at length with the situation which had prevailed in the Nova Scotia coal fields as a result of the prolonged cessation of work, and the activities of the executive in connection therewith. The committee concurred in the action of the executive, and expressed commendation for its "prompt action in placing on record the information that the whole labour movement in Canada were behind the miners of Nova Scotia." A telegram was received by Con-

gress from A. A. McKay, secretary-treasurer of District 26, United Mine Workers of America, which was read to the delegates and which conveyed the thanks of the miners for the assistance rendered by the Congress.

Migration.—This part of the report dealt with the executive's attitude toward the question of immigration, and outlined its conferences with officials of the American Federation of Labour and the Labour Department at Washington in respect to the operation of the Quota Law and the emigration of Canadian workers to the United States. The policies of Congress in regard to immigration, (practically as presented to the Dominion Government on January 31) were reaffirmed. The committee commended the efforts of the executive in dealing with "the delicate question of the United States Quota Law and the migration of Canadian workers to that country." Appreciation of the assistance in this matter of the American Federation of Labour was also expressed.

Industrial Disputes Legislation.—In this section of its report, the Executive reviewed the judgment of the Privy Council, which had declared the Industrial Disputes Investigation Act *ultra vires* of the Dominion, and the action of the Federal Parliament in amending the Act to conform with the decision of the Privy Council. The enactment of the Nova Scotia Legislature, creating a Permanent Industrial Court, was reported as being inimical to the workers. With reference to the amendments to the Industrial Disputes Investigation Act, the executive was opposed to the exemptions which excluded provincial and municipal undertakings from the application of the amended Act. This feature, the executive considered, would lead to the creation of a demand for provincial legislation, which "would tend to create confusion and lack of uniformity in the application of such laws, and that it would leave the door open for the enactment of legislation that would not be to the benefit of the workers." The committee concurred in the action of the executive in asking for amendments to the British North America Act, enabling the Dominion Parliament to pass legislation on the subject, and also in the executive's opposition to provincial legislation in this regard.

Reiteration of Legislative Requests and Miscellaneous Matters.—Under this heading were listed a number of questions, the subject matter of which was practically all covered in the resolutions submitted. In these cases, the committee reported that the questions were dealt with by resolution.

Reports of Provincial Executive Committees and Provincial Federations of Labour

These reports, which were also referred to the Committee on Officers' reports and were subsequently adopted without discussion, consisted of synopses of the legislative work of the provincial executive committees and federations of labour, together with summaries of the legislation requested and the legislation enacted in the various provinces. The committee commended the various executives for their activities and services.

Reports of Fraternal Delegates

The reports of the fraternal delegates—J. A. McClelland to the British Trades Union Congress, and John Colbert to the American Federation of Labour contained summaries of the chief questions dealt with at the conventions at which they had represented the Congress.

No Radical Change in Constitution

To the Committee on Constitution and Law, whose chairman was Vice-President Bert Merson, were referred several resolutions which sought to amend the constitution. Among these was a resolution which, in one form or another, had been rejected by previous conventions. The intent of this lengthy resolution was to alter the basis of the composition of the Congress membership so as to allow affiliation "to any body of workers in Canada, who are organized along trade or industrial lines in a functioning national or international union." This proposal would permit the admittance of dual organizations, secessionist bodies and independent unions. After prolonged discussion, the committee's recommendation of non-concurrence was adopted decisively. In the debate, the main argument advanced in favour of the resolution was that the depression in the trade union movement demanded a change in organization to prevent further demoralization, and that the Congress needed to draw to itself by a change in its constitution all the various organizations which comprised the labour movement of the country, complete autonomy for the Canadian Trade Union movement being the ultimate objective.

The reply of Secretary Treasurer P. M. Draper summarized the opposition to the proposed change. He repudiated the charge that the Congress was demoralized through loss of membership, and asserted that the resolution would only result in further division by admitting dual organizations and "rump organizations, composed of disgruntled members who had left international unions with a

grouch, imaginary or otherwise." He declared that "the cry of autonomy was only a subterfuge," and that "the trade unions in Canada had all the autonomy they required from their headquarters with all the machinery necessary for functioning as an industrial, legislative and political organization."

Considerable discussion also centered on another resolution which urged that the constitution be amended so that the voting power of the Congress would be based on the per capita tax paid by the various organizations instead of by the delegates present at the convention. The supporters of this resolution claimed that the time had arrived to change the basis of representation in order "to give representation to absentee membership" though "it was not the intention to corral votes." Opposition to the resolution was registered on the ground that, while such a system would recognize the numerical strength of the organization, yet "by the system of the bloc vote it would place the smaller unions in Canada at the mercy of the larger ones." After some further discussion, the committee's recommendation of non-concurrence was adopted. The adoption of recommendations of non-concurrence also rejected two other resolutions which called for the delegates electing all convention committees (with the exception of the Credential Committee) instead of these being appointed by the executive. A resolution, which aimed at the enlarging of the executive by the inclusion of the chairman of the respective provincial executives, was similarly rejected as was also a resolution to permit the issuing of charters to general labourers.

Hearing of Fraternal Addresses

As a special order of business, the Wednesday morning session was chiefly devoted to the hearing of fraternal messages. Mr. James Duncan, first vice-president of the American Federation of Labour, represented that body before the convention. In commencing his address, he expressed "abiding faith" in the trade union movement and in the trade agreement as developed on the North American continent. He advised against "being so gay about trying your third party stuff," adding that "we have tried it in the States and it isn't worth it." He considered that the labour movement in the United States had secured advantages by remaining out of party politics and adhering to the traditional policy of the A. F. of L. With reference to the eight-hour day, he preferred to see it established "through your trade unions, for then it is a permanent thing."

Mr. A. G. Walkden, general secretary of the Railway Clerks' Association of Great Britain, was the fraternal delegate from the British Trades Union Congress. Conveying the greetings of five million British trade unionists, Mr. Walkden, in commenting on the similarity of some of the problems confronting the trade union movement in Great Britain and in Canada, referred to the advanced position of the movement in Great Britain in having incorporated into legislation such objectives as old age pensions, social insurance and freedom from injunctions. "However," stated the speaker, "you are leading us in the progress you have made in owning and controlling your public utilities." Continuing, the British delegate extolled and reviewed the work of the late British Labour Government, which, he pointed out, had been only in office and not in power. Such being the case, it concentrated on administration and the budget. In this respect, he dealt with the operation of unemployment insurance in Great Britain, and claimed that "it had saved the country from terrible trouble." Outlining the basis of organization and the development of the trade union movement in Great Britain, he pointed to its mobility in combining its strength when facing a crisis. He illustrated this by the recent struggle of the coal miners of Great Britain in what he regarded as the crowning success of the trade union movement in Great Britain. In conclusion, the British delegate, in referring to the possibility of the same tactics being repeated on a larger scale, declared as follows: "We may have to say some day to a reactionary government that your policy may result in an armed conflict somewhere in Europe. If you are going into war we are going to stop the wheels of industry. There shall be no more war."

Miss Maud Foley Van Vaerenwyck, fraternal delegate from the National Women's Trade Union League, emphasized the necessity of interesting women workers in organized labour. She contended that women in labour unions should not be patronized, and that if the picket line in a strike was good enough for men it was also good enough for women. The speaker, urged the sending of Canadian working women to the League's training school in Chicago for leadership in the labour movement.

Mr. A. J. Kugler, general organizer for the International Union of the United Brewery, Flour, Cereal and Soft Drink Workers, and Mr. Walter W. Barrett, field agent of the International Allied Printing Trades Association, also addressed the delegates on the par-

ticular problems confronting their organizations.

A cable was received from Amsterdam conveying cordial greetings to the Congress from the International Federation of Trades Unions. A cable was also received from Paris, from James F. Marsh, fraternal delegate to the British Trades Union Congress, that the French Federation of Labour unanimously decided against negotiating amalgamation with the Red International.

Report of Union Label Committee

In addition to reporting on the whole subject of union labels, this committee dealt with two resolutions which were referred to it. The first of these (in which the committee concurred and which was adopted) asked that the executive council be instructed to request all trades and labour councils in Canada to organize union label leagues in order to promote the sale of union label products. The second called upon the executive council and the provincial executives to interview the Federal and Provincial Governments and municipal authorities with a view to requesting that all uniforms manufactured in their own plants or contract shops should bear the union label. This resolution was concurred in by the committee and adopted. The committee in its report stated that it found that apathy and a "lack of aggressive educational propaganda on the part of union workers are the main causes for the almost total absence of union label products, the few union shops and the small number of working buttons found in Canada." Impressing the importance of purchasing union made products as part of the policy of promoting a wider use of the union label, the committee's report urged the incoming executive to renew the attempts "to have legislation enacted by the Dominion Government to protect the union label in Canada." The committee's report was adopted by the convention after a considerable number of delegates had participated in the discussion which ensued. In connection with this subject, President Moore pointed out that with this request for a renewal of demands for registration of union labels, trade unionists would have to face an intensification of the agitation for the incorporation of unions, which organized labour had always opposed for a great many reasons. Coincident with the development of the union label campaign, he advocated the development of co-operative manufacturing so that once a trade was established by its label, it would be safer from exploitation if controlled by the workers' co-operative.

Congress Opposed to Arming Workers and to Use of Troops

The Committee on Resolutions dealt with about seventy-five resolutions which were referred to it for consideration of the course of action to be recommended to the delegate body. In several cases, the committee amalgamated certain resolutions in which there was duplication of the subject matter, and in others, where it disagreed with the original intent, amending clauses were substituted, or parts of resolutions were deleted. However, in practically all cases the recommendation of the committee was adopted by the convention. Several of the resolutions, or the recommendations thereon, proved contentious and were thoroughly debated. Among these was a resolution which (after setting forth the disturbances in Cape Breton, culminating in the killing of one worker and the wounding of several others—acts which were alleged to be "directly attributable to the provocation of BESCO'S* armed company police") demanded "immediate and drastic legislation prohibiting corporations from maintaining armed forces," with the further proviso that failure to secure such legislation "will compel the trade unions of Canada to take such steps as may be necessary to protect their own members during strikes, lockouts and similar disturbances." The committee recommended deletion of the proviso, which action was protested by Delegate Tim Buck, who declared that "the only way to prevent armed force is to make it more dangerous for a company to maintain an armed force." However, by a standing vote of 95 to 56 the convention supported the committee's deletion, and the resolution was carried, demanding only "immediate and drastic legislation" to prohibit corporations from maintaining armed forces. In addition, the convention, on the recommendation of the committee, adopted another resolution which also expressed opposition to the use of troops in industrial disputes, coupled with a demand for legislation prohibiting the same. Reference was also made to this matter in the executive council's report, where, in regard to the Militia Act, the executive recommended:—

"We further believe that the Federal Government should be given discretionary powers as to their compliance with such a requisition (for troops) even when made by a Municipality or a Provincial Government. In this way direct responsibility would be fixed upon those answerable to the electors for their action."

The report went on to state that amendments to the Militia Act, passed last session, did not make any such provision, and the executive

*British Empire Steel Corporation.

urged that further amendments be sought to give effect to this recommendation.

A resolution which stated that a number of men had been sent to the Southern Alberta beet fields by the Calgary branch of the Provincial Labour Bureau, and were put to expense because other labour was already employed there, and which asked that the men be reimbursed, was dealt with by the committee, the recommendation being that this question be taken up with the Dominion Employment Service. This recommendation was adopted.

Congress adheres to International Federation of Trade Unions

A debate resulted from a resolution—strongly supported by the Communist group in the convention—which urged “the convening of an all-inclusive conference of the trade unions of the world for the purpose of establishing a basis upon which all organized workers can be rallied into one Trade Union International.” The convention was also asked by this resolution to endorse “the policy and actions of the British Trades Union Congress in its joint efforts with the Trade Unions of Soviet Russia” in establishing (as “a practical step” towards international solidarity) the International Unity Committee, which had resulted from the Anglo-Russian Conference. However, the committee, in recommending non-concurrence, advised “that this Congress confine its relations with Labour in Europe to the International Federation of Trade Unions.” Replying to the arguments of the Communists that the resolution did not ask for amalgamation but “to endorse a certain policy,” President Moore declared that trade unionists in Canada, being economically a part of the American trade union movement, had a different situation to consider from that prevailing in Great Britain. He explained that the American Federation of Labour had withdrawn from the Amsterdam International to which the Trades and Labour Congress of Canada was affiliated. This being the case, he considered that world unity could not be accomplished unless the American Federation of Labour became a part of the Amsterdam International, and that “our best policy was to let the British go ahead with their efforts while we tried to bridge the gulf between the Amsterdam International and the American Federation of Labour.” The discussion was closed by the convention adopting the committee’s recommendation.

The extension of Dominion Government credits to Soviet Russia for the promotion of Russian purchases in Canada was urged

by two resolutions, in lieu of which the committee substituted one resolution to mean only the approval of “the resumption and improvement of trade relations with Russia.” The committee further recommended, in the event of such trade developing, that steps be taken to request the Russian authorities to place orders in Canada with firms employing union labour only. This substitute resolution from the committee was adopted.

Industrial Unionism Rejected

Five resolutions, all urging the adoption of some form of Industrial unionism by the amalgamation of the present craft unions into industrial unions, were submitted. As this question has been repeatedly before Congress conventions in recent years (and always defeated) the committee, in again rejecting these proposals, merely re-affirmed the consistent policy of the Congress as reiterated at the 1924 London convention, i.e. “adhesion to the present form of organization, providing as it does the machinery for closer co-ordination of international craft unions, which has worked so successfully in the past and been the means of very materially improving the wages and working conditions of the workers, not only in the Dominion of Canada but on the American continent.” The committee’s recommendation, re-affirming this policy, was adopted without discussion.

After considerable discussion, the convention adopted a resolution, which, after outlining the exploitation of Chinese Labour and the struggle of the Chinese people “against the brutal oppression of the foreign Imperialists,” called upon Congress to adopt, among others, the following demands: (1) the withdrawal from China of the Imperialists and their armed forces; (2) the granting of the demands of the Chinese workers now on strike.

Supports Employment Service of Canada

Criticism of the work of the Employment Service of Canada formed the contents of a resolution which called for its discontinuance if it was “found not practicable” to “function as was the expressed intent of those responsible for its organization.” The committee’s recommendation of non-concurrence was adopted after a discussion in which it was pointed out, in refutation of the criticism, that the Employment Service Act was enacted at the request of organized labour, and had served the interests of labour in preventing exploitation of the workpeople. The committee concurred in, and the convention adopted, another resolution which instructed the incoming executive of the Province of

Quebec to ask the Government for the complete abolition of all private employment agencies with the exception of those directed by trade unions.

Objects to Price of 4.4 Beer

A resolution from the Toronto Building Trades Council called for the Congress to reaffirm its attitude in favour of beer and light wines, at the same time objecting to "the extortionate prices fixed by the Ontario Brewers' Association for this mild beer known as 4.4." The matter was referred to the Ontario executive for "favourable action."

Two resolutions, which emanated from the floor of the convention, and which were introduced by unanimous consent, condemned the action of the British Columbia Legislature "in removing Labour's representative from the Motion Picture Projectionist Board" and requested that "this action be reconsidered," the decision of the convention being conveyed by wire to the Hon. John Oliver, Premier of British Columbia. The second, extending the "unanimous moral support" of the Congress to the miners in their industrial struggle, coupled with the sincere wish that an early settlement would be reached satisfactory to all the parties involved, was forwarded to John L. Lewis, president of the United Mine Workers of America. Before the adjournment, acknowledgement was received from the U.M.W. President.

Other Resolutions

Other resolutions, which were adopted, covered the following subjects:

Instructing the provincial executives to press for legislation prohibiting the commercial manufacture or making of clothing in homes.

Instructing the incoming executive to request the Provincial Governments to enact legislation, providing for a practical examination of auto mechanics.

Instructing all provincial executives to consider making provision, through traffic regulations, for the right of way being allowed to fire fighting apparatus when responding to alarms.

In favour of representations being made by the provincial executive for Quebec to the Quebec Legislature respecting certain amendments to the statutes pertaining to the licensing of motion picture machine operators.

Instructing the Congress executive to secure legislation compelling compulsory inspection of air pressure tanks and spraying machines.

Instructing the executive to request the Ontario Government to enact a standard code of building by-laws, which shall constitute the minimum requirements in municipalities and cities of the province.

Instructing the Quebec provincial executive to urge upon the Legislature of Quebec the ratification of the draft convention of the International Conference of Labour at Geneva on workmen's compensation in industrial accidents.

In favour of amending the Civil Service Act whereby any branch of the service so desiring can be placed

under the Industrial Disputes Act or an independent board "with full powers to adjust any grievances that may obtain from arbitrary findings of the Civil Service Commission."

Instructing the Quebec Provincial executive to make the necessary representations before the Legislature seeking enactment of legislation whereby no town or city may interfere with the right of its employees to become members of any union or association.

Instructing the executive officers to vigorously continue their efforts to secure legislation making illegal the issuance of injunctions in connection with industrial disputes.

Urging the institution of the eight-hour day on all public works.

In favour of federal office cleaners being put on the same basis as permanent employees with respect to salary, superannuation and other privileges; and of only widows and self-supporting women being employed as office cleaners where the nature of the work is such as can be performed by women.

Requesting legislation to compel all employers of labour to give all employees at least two weeks' holidays with full pay each year, ten months or more employment to entitle employees to be covered by such legislation.

Instructing provincial executives to take the necessary action to secure one day's rest in seven for fire fighters and all classes of workers.

In favour of certain amendments to the regulations of the Ontario Minimum Wage Board and the Ontario Factory Act.

In favour of having the Congress instruct its provincial executives to seek from the Provincial Cabinets the necessary legislation making effective a two platform system for all members of paid civic fire brigades.

Protesting against war memorials being built by public funds under unfair conditions.

Urging the immediate nationalization of all coal mines and natural resources operated under national control.

Instructing Congress to endeavour to achieve amalgamation of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and the Canadian Brotherhood of Railroad Employees. Also to bring about complete unity of organization among the postal employees.

Instructing the Congress executive, in conjunction with the Ontario executive, to impress upon the Ontario Government the necessity of strengthening the fair wage provisions of the Province, and making more adequate provision for its enforcement.

In favour of asking the Federal Government to penalize contractors who do not observe the Fair Wage Clauses according to the letter of the law, and also eliminating objectionable amendments of the regulations, relating to agreements.

Urging the Provincial Legislature of Quebec that the Fair Wage Act be amended providing for the insertion in all future contracts of the schedule to be paid all classes of labour, and that it be the duty of the Minimum Wage Commission to compile and enforce said scale.

Urging the Canadian Government, in the event of further steamship construction for the West Indian service that such steamships be constructed in Canadian yards and manned by Canadian citizens.

Urging the adoption of a series of suggestions from the Montreal Trades and Labour Council (relative to unemployment and conditions in the shipbuilding industry) and favouring the appointment of a Federal Commission to consider recommendations on the same.

Instructing the executive to seek a special interview with the Dominion Government with a view to giving effect to recommendations from the Montreal Trades and Labour Council looking towards a solution of unemployment.

Re-affirmation of adherence to the Congress principle of a working day of eight hours and a working week of forty-four hours, with the proviso that "in any locality where organized labour finds itself able to relieve an unemployed situation by a working week of less hours, this Congress is of the opinion such should be done."

In favour of legislation providing for unemployment insurance for all workers on a non-contributory basis.

Urging Congress to appoint a representative on the Executive Committee of the Workers' Educational Association, and, in conjunction with affiliated units, to aid in extending this system of workers education.

Urging upon the Legislature of the Province of Quebec the adoption of a series of measures to facilitate the development of education in that province. (These measures were the same as were endorsed by the Congress last year and were given in detail in the LABOUR GAZETTE for October, 1924, page 855).

Instructing the Ontario executive to urge upon the Ontario Legislature certain amendments to the Mothers' Allowance Act, and the administration of the Act in a more just and sympathetic manner.

Urging upon such Provincial Governments, which have not yet established Mothers' Allowances, the advisability of enacting such legislation without delay.

In favour of legislation to establish Old Age Pensions.

Urging restriction of immigration "until means are provided to look after the present population."

Urging the appointing of a Royal Commission, fully representative of all classes, including organized labour, to investigate the conditions under which the banking business is being carried on in Canada.

Urging amendments to The Bankruptcy Act so that in cases of insolvency the claims of employees for wages receive priority over those of all other creditors.

Urging the Congress executive to co-operate with the American Federation of Labour in its forthcoming organization campaign.

Protesting against military training in schools and demanding legislation eliminating the same.

Urging upon the Quebec Legislature the amending of Article 2931 of the Quebec Statutes making it necessary "that each School Commission furnish proof that not less than one-half of the sum granted for the purpose of buying prize books is employed in the purchasing of books written by Canadian authors, printed in Canada."

In the closing hours of the convention, a prolonged debate occurred over the minority order of the Board of Railway Commissioners which provided for a reduction in railway freight rates on grain and flour from the prairie provinces for export through Pacific coast ports. The decision of the convention was as follows: "That the convention vigorously oppose the enforcement of minority decisions of the Railway Commission on matters which have a very far-reaching effect, and refer the further consideration of the matter to the incoming executive for fuller investigation with other representatives of railroad organizations."

A part of one of the sessions of the convention was devoted to the presentation of suitable gifts to the visiting fraternal delegates and to the members of the local entertainment committee.

Election of Officers

In the election of officers, Mr. Tom Moore was elected president of the Congress for the

eighth successive year by a majority of 140 votes over Tim Buck of Toronto, the only other nominee. The vote was: Moore, 169; Buck, 29. Mr. P. M. Draper, who has been twenty-five years secretary of the Congress, was re-elected unanimously, his nominator being the same delegate who nominated him for the position twenty-five years ago. In honour of his quarter of a century continuous stewardship in this office, the delegates presented him with a suitable memento.

The full list of officers, provincial executive committees and fraternal delegates for 1925-6 is as follows:—

President, Tom Moore, Ottawa.

Secretary-Treasurer, P. M. Draper, Ottawa.

Vice-Presidents, James Simpson, Toronto, Bert Mer-son, Toronto, and J. T. Foster, Montreal. The three vice-presidents were all re-elected to office.

Provincial Executive Committees: Nova Scotia—(Left to the Congress executive to appoint representatives). Quebec—G. R. Brunet, Montreal; O. Fleury, Quebec; J. Pelletier, Montreal; O. Hebert, Hull. Ontario—H. S. Mitchell, Hamilton; A. F. McLeod, Espanola; R. Plante, Ottawa; Mary McNab, Toronto. Manitoba—J. L. McBride, Winnipeg; G. W. Howard, Winnipeg; J. H. Palmer, Dauphin; J. H. Roberts, Winnipeg. Saskatchewan—A. Eddy, Saskatoon; E. Perry, Regina; C. F. Green, and A. Baker, Moose Jaw. British Columbia—P. Bengough, Vancouver; R. Nunn, Victoria; Fred Hoover and Walter Scrivens, Vancouver. The first named delegate in each of the above provincial executives is the chairman.

After three ballots were taken, Montreal was chosen as the convention city for 1926.

Loss by Dust Explosions

Investigations conducted by the United States Bureau of Chemistry show that forty-five lives were lost, twenty-eight employees injured and \$5,000,000 worth of property was destroyed in dust explosions and resulting fires in the United States during the past year. These explosions and fires occurred in starch manufacturing plants, wood-working establishments, leather-grinding mills, feed-mixing plants, and grain elevators. A summary prepared by the bureau shows that there are 22,000 establishments in the United States manufacturing dusty products, such as starch, feed, cocoa, spice and sugar, or producing dust during the manufacture of woodenware, aluminum ware, corks, etc. The dust explosion hazard also exists in a smaller degree in warehouses, transfer stations and similar establishments where large quantities of dust or dusty material are handled either in bulk or in package form. Open lights, electric arcs, lighted cigars, cigarettes and pipes, sparks of static electricity, and the breaking of lighted electric lamps are stated to be sources of ignition sufficient to start a dust explosion when enough dust to form an explosive mixture is present in the air.

NOTES ON LABOUR UNION ACTIVITIES

American Federation of Labour Convention Call

THE American Federation of Labour has issued a call to the 45th convention, to be held at Atlantic City, New Jersey, commencing October 5. The call expresses the hope that every member organization will be represented at the convention, and take advantage of this opportunity for study, research and the formulation of future policies.

Brotherhood of Railroad Trainmen

Wage Movement.—The Brotherhood of Railroad Trainmen at their recent fourth annual convention, held at Cleveland, Ohio, adopted a report from the schedule and wage committee, recommending that the machinery of the Brotherhood be put in action, through its various associations of general chairmen, with a view to inaugurating a wage movement, seeking a substantial increase in rates of pay for men in train and yard service, and that the various associations proceed along this line at meetings to be held as follows:—Chicago Local Chairmen's Association, November 1, 1925; Western General Chairmen's Association, November 3, 1925; Southern General Chairmen's Association, November 10, 1925; Eastern General Chairmen's Association, November 17, 1925.

The convention further ruled that under no circumstances should there be any compromise in revising rules in connection with this wage movement. The Chicago Local Chairman's Association, known as District No. 4, is to set forth the rates of pay to be recognized as a basis of settlement for the yardmen of the United States and Canada. The rate of pay for roadmen will be based on the hauling power of locomotives resulting in flat increases in existing rates. In the event of a failure to effect a settlement upon the new principles introduced, the various associations are authorized to proceed as heretofore in obtaining a flat increase in pay for freight and passenger trainmen. The president of the Grand Lodge is to secure all available data relating to the principle of basing wages on the draw bar pull and weight on drivers of locomotives, and that such information be forwarded to the various associations for their assistance in the prosecution of the wage movement.

General committees are to endeavour to have a 12-hour day away-from-home-terminal rule, instead of the present 16-hour away-from-home-terminal rule, incorporated into the

schedule, and that this movement be nationwide in scope, including the Dominion of Canada, but not in conjunction with the proposed new wage movement.

The convention was opposed to the practice by which conductors are required to take train orders over the telephone.

The general committee are to seek the privilege of being a party, with the operating officers, to making and agreeing upon interpretation of transportation and operating rules affecting the employees in train and yard service.

A concerted effort will be made to have all railroads adopt a standard code of rules.

Merging of railways.—The convention authorized the president of the Grand Lodge to create a commission or fact-finding committee, to investigate merger questions for the purpose of preparing a plan to be submitted to general committees on roads involved in a merger proposition, in order equitably to safeguard the seniority rights of the employees that the Brotherhood represents. (A resolution respecting the rights of men on absorbed properties was passed at the previous convention, held at Toronto).

Promotion.—General grievance committees were instructed to insist that yardmasters be promoted from the ranks of yardmen according to their seniority.

Overtime pay.—The convention adopted a recommendation "that this organization recognize the principle of time and one-half for work performed in excess of eight hours to be as sacred as the basic eight-hour day is itself sacred and we urge this convention to go on record that the time and one-half rule shall not be compromised during the negotiation or application of the proposed wage movement."

Standard yard rates.—General committees are to urge companies to pay the standard rate of pay for yardmen performing work train service exclusively within yard switching limits.

Employment age.—The Brotherhood will seek to secure a modification of the existing practice of railway executives in refusing to hire men who have reached the age of 35 years, and in employing students, and to secure the employment of men between the ages of 35 and 45, being still in their prime.

Pension changes.—The Brotherhood's pension plan was amended by the addition of a

new provision that no application will be accepted from any member who has on July 1, 1925, reached the age of sixty-five years. No application will be accepted from a member who has after July 1, 1926, reached the age of forty-five years. Any person joining the Brotherhood of Railroad Trainmen after July 1, 1926, and who has reached the age of forty-five years will not be eligible for admission to this department.

Canadian Teachers' Federation

The sixth annual convention of the Canadian Teachers' Federation was held at Toronto in August. Vice-president R. E. Howe, occupied the chair.

The Honourable G. S. Henry, minister of education of Ontario, in welcoming the delegates, suggested that there was a defect in the present educational system, as students were trained without reference to the positions available for their employment, and that the convention might be able to suggest some method of selective education which would not overcrowd any profession. The chairman replied that the question raised by the minister involved expenditure and that with smaller classes and wider differentiation of courses something might be devised.

Reports were received from British Columbia and Alberta, from the Saskatchewan Teachers' Alliance, the Saskatchewan Secondary Teachers' Association, the Manitoba Teachers' Federation, the Ontario Secondary Teachers' Association, the Ontario Men Teachers' Association, the Federation of Women Teachers of Ontario, the Provincial Association of Protestant Teachers of Quebec, and the Teachers' Federation of Prince Edward Island. Information was given as to the relation of teachers to the Council of Public Instruction of Quebec and Prince Edward Island and the Departments of Education in the other provinces. The teachers of Nova Scotia and Ontario are to be invited to co-operate in making the Federation representative of the entire Dominion.

Contracts.—A committee was appointed to draft uniform legislation that would tend to obtain security of tenure for teachers in the various provinces, and to draft a form of contract to implement such legislation. A wide diversity was found to exist in the different provinces in regard to contracts, pointing to the need for a standardized form of agreement.

Interchange of teachers.—The delegates were strongly in favour of an exchange of teachers within the Empire and between the various provinces, and it was reported that progress had already been made in this direction.

These exchanges, it was thought, should be organized by the provincial departments, but if any further organization should be required the Federation will set up the necessary machinery. Due publicity is to be given to this policy through the provincial organizations.

The convention resolved that an excursion of Canadian teachers to the British Isles in 1926, under the auspices of the Canadian Teachers' Federation, would be desirable, and instructed the incoming executive to appoint a committee to consider the matter, and if practicable, to provide the excursion on the condition that the excursion be under the auspices of the Canadian Teachers' Federation.

The convention approved a suggestion that the Federation should have a representative on the Senate of Canada, and the Dominion prime minister and the leader of the opposition will be memorialized on the subject.

The principle that the teachers' training period should be for two years was approved.

A committee was appointed to report at the next annual meeting on the subject of permanent headquarters for the Federation.

The Secretary was instructed to inform the British teachers' organizations that there is at present a surplus of teachers in Canada, and that contrary statements are false.

Reduced return railway fares are to be sought for teachers desiring to travel eastward from the west during the summer vacations.

The Federation will take part in the next convention of the World Federation of Teachers, if it should be held in Canada.

A committee was appointed to promote the organization of teachers in backward districts, and another committee will secure full information as to matriculation certificates, high school diplomas and other matter in the various provinces.

The convention pledged its support to the Alberta Teachers' Alliance in their dispute with the Blairmore School Board.

The next annual convention will be held at Charlottetown, P.E.I.

The officers for the ensuing year were elected as follows:—President, Mr. R. E. Howe, Westmount; Vice-president, Mr. M. J. Coldwell; Secretary-treasurer, Mr. G. J. Elliott, Winnipeg.

Ontario and Quebec Typographical Union

The fourteenth annual convention of the Ontario and Quebec Conference of Typographical Unions was held at Windsor, Ontario, during the last week of June, Mr. J. A. P. Haydon acting as president of the Conference. Fraternal delegates were present from sister organizations, including Mr. George R. Brunet,

Canadian vice-president of the International Printing Pressmen and Assistants' Union, and Mr. Jos. Pelletier, general organizer of the Brotherhood of Bookbinders. In addition, Mrs. E. G. Simmonds and A. McDonald extended greetings from the Empire State Typographical Conference and the Michigan Federation of Typographical Unions. It was reported that since last November new local unions have been organized at Niagara Falls, Belleville, Owen Sound and Hamilton, while a large number of new members have been added in several other districts.

The convention pledged its full support to the International Typographical Union in the general campaign of organization, education and publicity, with particular reference to the organization of printers in small towns, and to this end the co-operation and assistance of the Weekly Newspaper Publishers' Association will be sought. Typographical unions throughout Canada having expressed themselves as in favour of placing a ten cents per pound customs duty on American magazines entering the Dominion, it was decided to address a questionnaire on this subject to all candidates in the forthcoming Dominion elections, and the replies will be published. The convention also requested the establishment by the Dominion Government of an independent tariff commission.

The convention urged all affiliated unions and their members to co-operate with the school authorities in furthering technical education.

During the sessions a British flag was presented to Mr. J. M. Lynch, president of the International Typographical Union. This will be flown on certain specified days from the new headquarters building in Indianapolis. Mr. Lynch was informed that "now that the International Typographical Union owns a headquarters building, which is the property of the membership residing in the United States and the Dominion of Canada, the Canadian membership believes that the flags of both countries should be flown from this building."

Officers were elected as follows:—

President, J. A. P. Haydon, of Ottawa.

Vice-president, Hugh S. Bentley, of Hamilton.

Secretary-treasurer, A. H. Wheatley, of London.

A vice-president to represent the Quebec unions will be appointed by the executive committee.

St. Catharines was chosen as the convention city for 1926.

Industrial Alliance in Great Britain

At the invitation of the Miners' Federation of Great Britain, a conference of certain British trade unions, with an approximate aggregate membership of 3,000,000, was held recently with a view to reviving on a broader basis the "triple alliance" of miners, railwaymen and transport workers. The unions represented were: The Miners' Federation, National Union of Railwaymen, Associated Society of Locomotive Engineers and Firemen, Railway Clerks' Association, Transport and General Workers' Union, National Transport Workers' Federation, Amalgamated Engineering Union, Federation of Engineering and Shipbuilding Trades, and Boilermakers' Society.

The conference decided to appoint a committee to consider plans for the establishment of an alliance of these organizations, for the purpose of maintaining labour standards and improving the wages and conditions of the workers. A sub-committee of six was subsequently appointed to draft the details of the alliance and to examine constitutional difficulties.

The draft constitution of the proposed alliance was issued in July. The constitution states the objects of the Alliance as follows:—

"To create, by means of an alliance of the specified organizations, a means of mutual support to assist any or all of the allied organizations in defending the hours of labour and wage standards, and securing advancement of the standard of living, or to take action to secure acceptance of, or to defend, any principle of an industrial character which may be deemed vital by the allied organizations."

The conditions of membership involve the allied organizations in definitely undertaking, notwithstanding anything in their agreements or constitutions to the contrary, to act as directed by the general conference of the alliance. Nothing in the constitution interferes with the right of the allied organizations to promote movements on their own behalf, but in such cases they are not entitled to the assistance of the alliance.

International Seamen's Conference

A conference between representatives of the seafarers' organizations affiliated to the International Transport Workers' Federation and representatives of organizations not so affiliated (i.e., the National Sailors' and Firemen's Union, the International Seamen's Union of America, the Association of Danish Seamen, and the Danish Cooks and Stewards' Union) was held in London, England, in July. The object of the conference was to consider the

situation created by the omission to place on the agenda of the next International Labour Conference the question of hours of work of seamen. The following resolution was adopted:—

That a joint committee of representatives of deck hands, stoke-hold and catering departments be appointed to bring before the 1926 Conference of the International Labour Organization a request to discuss hours of labour at sea; further, that such committee be instructed to draft a schedule of working hours for all seamen on board ship.

The conference appointed three delegates from each organization to be members of the committee.

It was found impossible to come to an agreement on the subject of the establishment of an International Seamen's Code, the representatives of the National Sailors' and Firemen's Union and of the American organization having stated that they did not desire the reform in question.

Employees and Welfare Schemes

The general executive board of the Amalgamated Association of Street and Electric Railway Employees of America, after an investigation lasting for more than a year, have recommended that local unions be instructed to see that future wage contracts are not to contain clauses requiring employees to assess themselves for welfare schemes. Such schemes include provision of old age pensions and sickness and accident benefits. The investigation showed that in a few cases the employers bore the entire cost of the benefits, but that many employers collected from one to three per cent of wages, often without the consent of the employees. The report of the executive board states that "where a *bona fide* organization of employees does not exist, the cost of these schemes is now borne by wages, and the workers are paying dearly in inadequate wage rates and inferior labour conditions. There are companies with which our local divisions have contracts that had imposed these insurance benefit schemes upon our members without consulting the organization, and have required the employees to jointly contribute in paying the cost. Our members had nothing to say in establishing the insurance, bargaining its terms or cost, or the sums, if any, they should contribute to this cost. This is not democracy in industry. The employees are supposed to be the direct beneficiaries of this insurance, bearing part of the expense and should therefore have a say in its establishment."

Vacation House for Garment Workers

"Unity House," a holiday home at Forest Park, Pennsylvania, lately provided by the International Ladies' Garment Workers' Union for the use of its members, is described in the July issue of the *American Federationist*, by Fannia M. Cohn, a vice-president of the organization. The vacation home, she states, was originally the property of the Waist and Dressmakers' Locals 22 and 25, but was bought this spring by the International Ladies' Garment Workers' Union. Tens of thousands of dollars have been invested in improvements by the International. The transfer of the vacation center was the occasion of a three-days' celebration on June 12, 13, 14. Additional significance and prestige was given the occasion by the presence of the president of the American Federation of Labour, William Green. Unity House, operated on a non-profit basis, and managed by our International, is made available to all the members at a rate of seventeen dollars a week. It stands on a large tract of land which has been cleared in the midst of forest and hills. The settlement consists of cottages which can accommodate about 600 members at a time, and is "equipped with everything that civilization has prepared for the pleasure of the leisured rich."

Employee Lunchrooms

The American Management Association has published a pamphlet on "Employee Lunchrooms," showing the benefits to be derived by employers and workers from plant restaurants. A large employer of labour states that "investigation after investigation has proved that in factories not equipped with plant restaurants, the production charts become very erratic after the noonday recess, simply because the workers have not been fortified with nourishing, wholesome food; and not only does production suffer a definite setback, but the number and seriousness of the accidents increase, especially in the last two hours of the working day."

Another employer gives his experience as follows: "We are thoroughly convinced that the lunchroom has been of material benefit in our accident prevention campaign, has increased efficiency and has minimized time lost through sickness."

Some plant cafeterias are run entirely by the employees themselves. One of these has been in existence for fifteen years. It employs a full-time manager, and is able to make a small profit for the benefit of the employees' club house.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Inspection of Machinery in British Columbia

The chief inspector of factories of British Columbia states that "accident prevention has become a definitely organized objective in practically all large industrial plants throughout the province, with the result that records concerning preventable accidents show a gratifying reduction. A different procedure is now being followed when new machinery is being installed or plants rebuilt. In the past the dominating objective appeared to be to get the machinery in operation and then wait until the inspector made an inspection of the plant before any serious attempt was made to provide safe working conditions for the employees. The general practice at the present time, however, is to have all safeguards installed before the machinery or plant is placed in operation, and then to notify the inspector that the plant is ready for inspection."

Pure Air Possible in all Factories

"Ventilation problems no longer offer insuperable difficulties to the engineering world, but on the contrary, experts in this line are available whose experience justifies the assertion of the principle that a clean breathing atmosphere may be provided for the workers in any of the industries that are carried on in this country." This view is expressed by Mr. John Roach, deputy commissioner of labour of New Jersey, in an address reported in the United States *Monthly Labour Review* for July. "I am willing," he says, "to stand on the general theory that every worker is entitled to safe, hygienic working conditions, and none should be exposed to the danger or discomforts of industrial dust, noxious fumes, or excessive heat, during the period of his employment. Engineering science has made such strides in the field of mechanical ventilation that there is no longer any deep-seated or intricate problem involved in the arrangement of processing methods that will prevent the installation of practical mechanical devices to confine or remove dust, vapours, and gases at their point of origin."

The speaker pays a tribute to the employers in regard to the protection of the workers. "The general attitude of employers toward the introduction of expensive plant improvements has broadened during the past decade to such an extent that the combined forces of engineering research and investigation are now engaged in developing and perfecting standardizations of processes having in view the ultimate safety of the working people. The practice of plant managers and engineers

meeting in conference and exchanging views on processing has divested important trade groups of the curtains of mystery and secrecy that formerly hid their methods from the public gaze and has enabled progressive directors to install processing safeguards that are the joint product of technical and practical experience. . . . The safety-first movement that has reached proportions of national importance probably originated in the industrial convulsion that caused many of our leading states to adopt workmen's compensation laws based on the economic theory that industry, rather than the individual worker, should bear the financial burden of industrial accidents causing loss of time and impairment of earning ability. . . .

In the early days of our legislative struggles for improved labour legislation, very little was said about injuries due to breathing air contaminated with poisonous or non-poisonous dusts, vapours, or gases, as most of the early efforts to provide a larger measure of protection for the workingman were confined to accidents caused by dangerous machinery or defective plant premises. . . . In this country there has been a general acceptance of the modern enlightened working standard that every worker is entitled to clean air and that (while certain dusts and fumes are more dangerous than others) all contamination of the atmosphere of the workroom must be avoided. This desirable condition may be effected through the installation of mechanical exhaust ventilation which can be adapted to almost every variety of manufacturing process involving the evolution of dusts, fumes, steam, or excessive heat."

Analysis of Lost Time Accidents

The Engineering and Rating Division of the Maryland Casualty Company recently prepared charts showing the "lost time" accidents which had occurred in 3,788 plants in seventeen manufacturing groups. These charts are analyzed in *Safety Engineering* (New York), which points out that it is difficult to compare the mechanical causes of accidents in different industries owing to the wide range in classification. In a study of the non-mechanical causes of accidents, however, there is more nearly common ground in the industries and we find that "handling of objects," "falls of persons," "handling tools," "falling objects," and "electricity" are among the more frequent causes of accidents in the non-mechanical classes of accidents. They stand out conspicuously as causes to be studied and remedied. The silk manufacturing industry

lost on an average less than one day per employee (.99); knitting and hosiery came next with 1.07 days per employee, and textiles third with 2.18 days for each employee. In food manufacturing accidents caused the loss of 15.12 days for each employee—the greatest number for any of the seventeen industries—with foundries 14.48, forging 13.19, and machine shops 12.04, following close upon one another. In comparing the amount of time lost in temporary accidents with that of fatal and permanent accidents for each industry, we find that in forging only 13.74 per cent was due to temporary accidents and 86.26 per cent to fatal and permanent accidents. Among the various industries this shows the smallest percentage of lost time due to temporary accidents and the largest to fatal and permanent accidents. In contrast the greatest percentage of lost time (30.6) was due to the former in food manufacturing and 69.4 per cent to the latter. In all industries much more time is lost by death and permanent accidents than by temporary accidents. The results show that the attention of operators and safety inspectors should be especially directed toward reducing the hazards that kill and maim for life. The time lost from temporary accidents is comparatively slight.

Employees' Life-Saving Medals

The president of the Chicago North Shore and Milwaukee Railroad Company stated in a recent address that "about five years ago it was decided to give medals to employees who had rendered some unusually meritorious service in connection with rendering first aid, or in saving life. A bronze medal or a silver medal is given in cases of exceptional service rendered where the life of the injured party was not at stake; the gold medal is given only in case of the actual saving of a life. Since this plan was put into effect the two companies have awarded thirteen gold medals, three silver medals and two bronze medals. This means that thirteen lives have been saved as a result of the instruction received. Nine of these cases were away from company property and the persons saved were not employees of the company."

Rock Dusting in Coal Mines

The Illinois Coal Mining Institute at a recent meeting discussed rock-dusting to prevent explosions, as recommended by the United States Bureau of Mines (LABOUR GAZETTE, July, 1924, page 537, etc.) It was found that "the practice of rock-dusting had proven to be practical in application, efficient in performance, harmless to mine and men and rea-

sonable in cost." The safety engineer of the Old Ben Coal Corporation reported that they were starting their ninth season with rock-dusting. He reported that since the winter of 1917-18 nine explosions have occurred, seven of which reached a rock-dust zone where the flame was extinguished by the first dust in the path of the explosion. Two were not of sufficient intensity for flame to reach the dust zone, although the force of these threw the rock dust into suspension. Two were of enormous intensity in force and flame and undoubtedly would have been disastrous had it not been for the rock dust installations. He stated that full dependence is placed in the dust coating of haulageways, for it is a simple matter to keep the ash content on the roof and ribs greater than 70 per cent. In addition, however, dust trough barricades are installed in wide places along haulage roads at 500 feet intervals to give additional protection, but primarily to have rock dust in quantities available in the event of a mine fire. An official of the Peabody Coal Company stated that for the initial dusting the average cost, including labour and material for distribution of rock dust and erection of barriers (allowing for depreciation on equipment) amounted to 2½ cents per foot of open entry. In repeating for second and subsequent dustings, which it is proposed to perform every six months or sooner, if required, there will be a small increase in length of main and cross entries. With increased length of entries, added barriers, maintenance of barriers in place and continued dusting of roadways and air courses at 6 months intervals, it is estimated that the average cost based on the present wage scale for this important safety measure will be 1.6 cents per ton on the output for the next ten-year period.

Miners' Nystagmus and Unrest

A recent article in the *Lancet* (London) on "The Mind of the Miner" states that in the mining industry the amount of time lost on account of disputes has been higher than in other industries, while the amount of unemployment has been less; at the same time mortality rates for accidents and for all causes have been falling, and great disasters have been fewer. Nevertheless within the industry unrest varies on the different coal fields directly with mortality. The suggestion is made that the miner suffers from a "dungeon complex," which incidentally is manifested by his peculiar disease, nystagmus, and that the miner's psychology may be associated with the cause of nystagmus, that is, dim illumination.

CANADIAN NATIONAL RAILWAYS FIRST AID COMPETITIONS, 1925

The winning teams in the First Aid Competitions held by the Canadian National Railways in 1925 are given below, as compiled by the Company's Department of Safety and First Aid. All the Dominion and regional competitions were conducted by Colonel C. A. Hodgetts, C.M.G., M.D., director-general of St. John Ambulance Association.

Dominion Trophies (St. John Ambulance Association)

Montizambert Cup, representing championship of Canada, open for men. Winners, Stratford Shop Team No. 2.

Wallace Nesbitt trophy, representing railway championship of Canada, open to men. Winners, Montreal Car Department, No. 1 team.

Lady Drummond Cup, representing championship of Canada, open to women. Winners, Montreal General Offices, No. 1 team.

Ontario Province Shield, representing provincial championship, open to men. Winners, Stratford Shop Team No. 2.

Quebec Province Shield, representing provincial championship, open for men. Winners, Canadian Pacific Railway, Montreal, Team.

Manitoba Province Shield, representing provincial championship, open for men. Winners, No. 14 Division St. John Ambulance Branch, Team No. 2.

Saskatchewan Province Shield, provincial championship, open to men. Winners, Royal Canadian Mounted Police, Regina.

System Championship

Thornton Cup, representing championship of Canadian National Railway system, open to men. Winners, Fort Rouge Shops.

Robb Cup, representing championship Canadian National Railways system, open to women. Winners, Montreal General Office Team No. 2.

Regional Championship

Chamberlin Shield, representing championship central region, open to men. Winners, Stratford Shop team No. 2.

Bowker Cup, representing championship central region, open to women. Winners, Montreal General Office team No. 2.

Officers' Cup, representing championship Grand Trunk Western region, open to men. Winners, Battle Creek offices, "C" team.

Officers' Cup, representing championship Grand Trunk Western region, open to women. Winners, Detroit General Office, team "A."

Officers' Cup, representing championship western region, open to men. Winners, Fort Rouge Shops.

Officers' Cup, representing championship western region, open to women. Winners, Edmonton, Alberta.

Officers' Cup, representing championship Atlantic region, open to men. Winners, Moncton General Office, team No. 1.

Officers' Cup, representing championship Atlantic region, open to women. Winners, Moncton General Office team.

Officers' Cup, representing championship Telegraph Department, open to men. Not competed for in 1925, owing to recent organization of classes.

Barber Cup, representing championship Telegraph Department, open to women. Not competed for in 1925, owing to recent organization of classes.

Galloway Cup, representing championship electric lines, open for general competition. Winners, Montreal and Southern Counties Railway No. 4 office team.

Local Trophies

Hutchison Shield, representing Montreal and District, open to men. Winners, Montreal General Offices, team No. 5.

Bourne Cup, representing Montreal and District, open to women. Winners, Montreal General Office team No. 4.

Deacon Shield, representing Stratford, Ontario, division, open to men. Winners, Stratford Motive Power Shops, team No. 4.

Officers' Cup, representing Stratford Division (Transportation only), open to men. Winners, Palmerston, Ontario, Motive Power team.

Officers' Cup, for those who have not won any previous trophies, open for general competition. Winners, Owen Sound, Ontario, team.

"Hanna" Cup, representing championship Winnipeg and District, open for men. Winners, Fort Rouge Coach Shop team.

Library Cup, representing championship Battle Creek versus Port Huron shops, open to men. Winners, Battle Creek Shop, team No. 1.

"Page" medal, representing Central region, for constables, open to men. Winners, Stratford team.

The *Nations Health* (Chicago) notes that the State of Ohio has lately set aside one per cent of the State Workmen's Compensation Fund for the prevention of industrial accidents. It says "the general adoption of such a means of providing funds for the cause of industrial hygiene would place at the disposal of the health forces of the several states resources such as they have scarcely dared to dream of in the past."

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities are also noted which have a direct bearing on the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Boys of London, Ontario, Seeking Training

Between 30 and 40 London boys in their late teens are seeking some place where they can get a practical training in one of the trades and are unable to find such a place. Mr. J. C. Spencer, superintendent of the Employment Office at London, has a list of boys who want to learn a trade in a practical way in a factory or with a large company and whom he cannot settle nor satisfy. "These boys," he says, "are just the right type to encourage to learn a trade. They come to me asking where they can go for their training, and I am largely at a loss to tell them. This morning I was able to find room for three in a London foundry. I would like to issue an appeal, not only to London business men, but to firms in Western Ontario on behalf of these boys. As the case stands at present, unless these youngsters get what they want here they will go across to the other side."

Mr. Spencer points out that there has been a change in the minds of the boys of from 16 to 18 in the last five years, and that now there is a demand for training in one of the trades. The boys on his list are all through high school. "There seems," he says, "to be a definite need in the case of these boys which we are unable to fill, and which is a vital one to the country as well as to the boys. If there is no place where they can learn trades we shall lose them and in ten or fifteen years' time the Canadian producer will have to import his skilled men. As a matter of fact, at the present time many large firms are making a practice of importing from Great Britain and from the States all the highly skilled men they require, using them as long as they need them and then letting them go. It may be the most efficient plan for these firms from a dividend point of view;

I do not know, but it is partly the cause of the present dearth in places for training our young men. I would like to see some definite action taken in a general way to deal with this growing problem."

Need for Apprenticeship

That many boys leaving school are likely to drift into the ranks of casual labour through the present unsatisfactory state of affairs is a warning sounded by social workers of the Family Welfare Association in Montreal. Great difficulty is found in getting boys into jobs which promise a good future through the opportunity of learning trades. Instead, the "blind alley" job, with all its dangers, is the alternative, and even that is hard to find. As hundreds of boys are leaving school each year, their prospects under such circumstances appear anything but hopeful. Numbers of these boys, it is said, would make good carpenters or mechanics if openings could be found for them, and the lack of such opportunities means that a large class is growing up without any dependable means of livelihood through no fault of its own, and constitutes a real economic menace for the future.

Apprenticeship for Moulders

The following extracts are from the fourth of a series of articles on Management Principles of Apprenticeship, by H. A. Frommelt, which appeared in *Industrial Management* for June, 1925.

The Falk Corporation, of Milwaukee, Wis., which does a general steel casting business, was forced with the ending of the war to consider some means of maintaining a skilled personnel for its steel foundry work. It became obvious that if it were to maintain itself as a self-dependent foundry it must in some way begin the training of young men for this important trade. Everywhere the cry went up that while this had been tried again and again by foundries all over the country, it must result in a failure because American boys could not be induced to take up this disagreeable and unpleasant trade. But something must be done. Foundry personnel must be made self-sustaining. Skilled hands were no longer coming to us from Europe. There was nothing else to do but to attempt the impossible, namely, of inducing native American boys to learn the foundry business.

It was apparent to the executive heads at the start that even in a plant of this size employing normally between a thousand and

twelve hundred men, the work of establishing an adequate apprenticeship system must be put in the hands of an apprentice organization whose duties had no connection whatever with production. This, it should be noted, was the very first step of the management. There was no thought of attempting to induce young men to enter upon apprenticeships until a systematic and organized course of work and study could be placed in the hands of a competent corps of instructors and foremen. This in itself is worthy of note, as being an essential step toward the attainment of success. Simultaneously, with the establishment of an apprenticeship organization, the principle of tradition was invoked. Little actually needed to be done to revive the tradition of apprenticeship in this particular organization. Significantly enough, the majority of the present foremen and superintendents were men who at one time had been apprentices under an earlier apprenticeship system. The development of the business into a modern industrial organization had, like in so many other instances, been instrumental in the breakdown of the old apprentice plan. But the foremen as a body were most favourable to the establishment of some adequate system of apprenticeship training. They could not be expected to carry out the details of such a plan, but if properly organized they would give it such co-operation necessary to make it successful. This, as the events later proved, they did whole-heartedly and successfully. The tradition of training had not died out in this organization; it needed but the proper cultivation to bring it again to more active life. While the principle of tradition was being established and applied, the work of preparing programmes of shop work and school study were being drawn up. The schedule of foundry shop work for a four-year apprentice shows that every phase of this trade is taught the apprentice. The actual application of this schedule is entrusted to a competent instructor skilled in the foundry business and for this purpose a section of a small molding floor was set aside for the instruction of the beginners. Apprentices, after a period varying from six to twelve months, are placed in charge of foremen in various parts of this department. They are then recalled to the instruction department, where they are given more advanced work. Then again they are returned to some foreman in charge of actual foundry production. The time spent under the instructor is set aside primarily for the purpose of learning the essential elements though this is accomplished by working on actual commercial

work. Here production and speed are secondary, though they are not lost sight of in the up-grading of the individual apprentice. At all times the ideal of making an apprenticeship an industrial education is kept in mind and striven for by all possible means.

But there is a vast amount of technical information necessary to make a competent and skilled mechanic. The following course in related trade technique for apprentices in the steel division shows that this phase of the industrial education has not been neglected. Company classroom instruction was at first established with the idea of supplementing the instruction given in the local vocational school. This was thought justifiable since the company wished to establish an intimate connection with its apprentices each week through the medium of small classes. Thus it would be possible to discuss shop policy, matters of discipline and local regulations affecting the separate departments. However, the events showed this was unwise. The vocational school was far better equipped and manned for teaching this academic work than a company this size could ever hope to be. Hence the academic work was entirely transferred and given over to the direction of the local vocational school. The weekly contact is still maintained in half-hour classes additional to the time given over to the formal classroom study. Comparatively small groups are gathered together in the company's classroom. A series of fifteen-minute talks have been arranged on subjects ranging from shop conduct to taxation, touching upon every phase of the apprentice life in the shop, at home, in school and in his relationship as a citizen. It is during this time that company policy can be directly or indirectly expressed. It is during this brief weekly contact that certain principles of thought, conduct and action are laid before the young man in a manner calculated to provoke thought rather than stifle it. In this manner the foundations of a manly loyalty can be laid.

Apprentices whose applications have been accepted are not immediately assigned to shop work. They are sent to the local vocational school full time, at the regular apprentice rate of pay. This full-time school period may vary from a week to three months, depending upon the attitude, adaptability and other characteristics of the probationer. These young applicants are here sorted out as it were for the trades for which they are best suited. Some who are entirely unfit for any of the trades offered at the Falk Corporation

are dropped from this full-time class. Thus the turnover of probationary apprentices is made to take place in the school rather than in the shop. This accomplishes two things, first, it reduces the cost of turnover very decidedly and, secondly, relieves the irritation to the foremen who would otherwise come in contact with some, at least, entirely unsuited individuals. This arrangement has justified itself financially due to the decrease in expense involved in apprentice turnover, and, secondly, to the fact that the learner has received an initial training in shop work which proves itself very valuable before entering upon commercial shop work.

While the apprentice department has in its direct charge the arrangement of schedules of study and their proper execution and supervision, the education principle is carried much farther. By a close intimate contact the apprentice is encouraged to bring all his problems, difficulties and anxieties, no matter what nature or where they may occur, to the apprentice superintendent or assistants. This ranges from a little welfare work in times of sickness to the arrangement of legal aid when needed. Thus the principle of education in its broadest possible sense is being constantly applied.

Parents are enlisted as a vital element in this training programme. Before the contract, which is in writing and demanded by the state of Wisconsin, is signed, the parents are interviewed and the whole matter laid down before them in a thorough-going discussion of the importance and the meaning of an apprenticeship. During the apprenticeship, whenever the occasion demands, the parents are visited. It may be to enlist their aid in overcoming a lack of progress in their son, or it may be to encourage them that they in turn will encourage their son to continue in the progress he is making. A serious attempt is made to keep clear of all generalizations as regards the rating of the individual apprentice. Monthly reports in percentages of shop work, school work and conduct are sent to the parents. This monthly reminder with any necessary detailed explanation establishes another link in the chain that binds the parents to this programme of industrial education.

A final word regarding the programme of shop and school work. It is evident from each programme that a young man in the foundry, for instance, is not turned loose on a sand pile and expected to uncover the tremendously interesting things about this most fascinating of all trades. An inkling of what goes on in the furnace and the making

of the steel, some idea of the characteristics of the sand he is handling, some principles of the engineering problems involved in rigging up for moulding jobs and the problems centering around handling of materials, are given. The interesting and vital things about the chemistry, the heat treatment and the metallurgy of the foundry business are presented. This is the principle of education being applied. And this is nothing except the organization of answering the infinite hows and whys that arise in the inquisitive mind of the young learner. And this is the essence of success in attracting young Americans even into the foundry work.

While the problem was thus being solved in the various departments of the Falk Corporation, it soon became apparent that unless the rest of the surrounding industrial community be drawn into this programme of apprenticeship, the results would prove too costly. This one corporation would become the centre of training for the entire community. Other plants must be drawn into this work and be induced to contribute their proportionate share. But the smaller plants were unable to enter upon a sufficiently comprehensive plan justified by their variety of work which would induce young men to accept their programme as presenting a real industrial education. The overhead of an apprentice organization, shop instructors, etc., was obviously too great a burden. All this, in spite of the fact that in the vast majority of cases the small plants were most willing to do their share in the training of a sufficient personnel for that district.

Here, then, comes the necessity for the principle of solidarity. The Falk Corporation drew about itself a number of the smaller plants within a reasonable radius. Programmes of shop work were so arranged that they could be started in the one and completed in the other. The ordinary foundry has no extensive heat treating equipment. Several concerns doing this work were enlisted and asked to contribute to this programme. The work of supervision, the organization of classes and other details of the apprenticeship work in the small plants remains in the hands of the apprentice organization of the Falk Corporation.

The difficulties at first thought insuperable, regarding the exchange of apprentices from one plant to another and the co-ordination of their schedules were found to exist not in fact, but in imagination only.

Modern apprenticeship is not and cannot be an affair centered wholly in one plant except in very extraordinary cases. To make indus-

trial education nation-wide in scope, industrial districts must be so organized that within them, all plants, no matter what their capacity, can carry on apprenticeship training by co-operating with other or larger plants.

The organization of districts into a national group along trade lines and these national trade organizations into one large organization is necessary before apprenticeship can be made effective in modern industry.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Eighth and Ninth Sessions of the International Labour Conference

M. Albert Thomas, Director of the International Labour Office, has informed the members of the International Labour Organization that the Governing Body of the International Labour Office, at its twenty-fifth session in Geneva last January, decided to call two sessions of the General Conference of the International Labour Organization in 1926. The two sessions, which will be respectively the eighth and ninth, will probably follow the one upon the other without interval. The exact dates will be fixed later.

At its twenty-fifth and twenty-sixth sessions the Governing Body settled the agenda of these two sessions of the Conference, as follows:—

Eighth session: Simplification of the inspection of emigrants on board ship.

Ninth session: I. International codification of rules relating to seamen's articles of agreement. II. General principles for the inspection of the conditions of work of seamen.

Agenda of the Eighth session.—Having decided to call two successive sessions of the Conference, the Governing Body considered that it would be desirable not to limit the work of the first session to final approval of the decisions of the 1925 Conference. If its range of work were so limited, it might be considered by the governments that the session would be too exclusively formal in character, even if some of its sittings were devoted to discussion of the Director's report. The Governing Body accordingly decided that a further question should be included in the agenda of the eighth session, and this question it considered might be selected in such a way that advantage could be taken of the presence in Geneva of the representatives of maritime departments and undertakings who would be coming there for the special maritime session. A question connected with the sea transport of emigrants was therefore selected. The Governing Body considered that this question, which was dealt with in one of the resolutions of the International Conference on

Emigration and Immigration called at Rome in 1924 by the Italian government, might be sympathetically considered by the governments.

Agenda for the Ninth session.—As regards the agenda of the ninth session, the Governing Body had before it, as has already been stated, the resolutions adopted by the Joint Maritime Commission at its Fourth session in September, 1924. The Commission proposed the two following items: (a) international codification of rules relating to seamen's articles of agreement; and (b) general principles for the inspection of the conditions of work of seamen.

The Governing Body's decision to place the former of these items on the agenda gives effect to a resolution adopted at the Genoa Conference, which asked the Governing Body to place on the agenda of a future session of the Conference the principal questions which required to be investigated with a view to the adoption of draft conventions or recommendations which would promote the international codification of maritime law. The rules relating to seamen's articles of agreement are intended to form the first part of the International Seamen's Code which the Genoa Conference, in the same resolution, asked the International Labour Office to prepare.

Issue of questionnaires.—The first step in preparation for the 1926 sessions of the International Labour Conference has been taken by the issue to governments of questionnaires on two of the three items on the agenda. The third questionnaire will be issued shortly.

The two questionnaires now issued relate to the inspection of emigrants on board ship and the inspection of the conditions of work of seamen. Each questionnaire gives an outline of the problem with which it deals, a summary of the existing law and practice in various countries, and a series of specific questions designed to elicit the views of governments. Proposals framed on the replies will be drawn up in due course to serve as possible bases for discussion by the Conference.

The Maritime Conventions

The Merchant Shipping (International Labour Conventions) Act of Great Britain received the Royal Assent on July 31, 1925. The Act gives effect to the following draft conventions adopted at the Genoa Conference:—

(1) Concerning unemployment indemnity in case of loss or foundering of the ship (Genoa, 1920);

(2) Fixing the minimum age for the admission of young persons to employment as trimmers and stokers (Geneva, 1921); and

(3) Concerning the compulsory medical examination of children and young persons employed at sea (Geneva, 1921).

It will be recalled that amendments to the Canada Shipping Act were made at the parliamentary session of 1924 with a view to giving effect to certain draft conventions in regard to seamen, including those mentioned above in connection with the amendments to the Merchant Shipping Act of Great Britain. The Canadian amending act, however, was not to take effect until a date to be fixed by proclamation of the Governor-in-Council (LABOUR GAZETTE, July, 1924).

British Criticism of "Workers' Spare Time" Proposal

The British Government recently communicated to the secretary-general of the League of Nations its views on the recommendation regarding the development of facilities for the utilization of workers' spare time which was adopted by the International Labour Conference at its sixth session, 1924. (The text of this recommendation was given in the LABOUR GAZETTE for August, 1924). The British Government considers that the recommendation is

of so vague and general a character that it cannot be of much practical utility. The communication continues:—

There is one part of the recommendation to which His Majesty's Government think it desirable to refer specifically. In part I, sub-paragraph (a) it is recommended "that each Member, whilst having due regard to the requirements of different industries, local customs and the varying capacities and habits of the different kinds of workers, should consider the means of so arranging the working day as to make the periods of spare time as continuous as possible." If it is understood that the object of this recommendation is to promote arrangements for a working day unbroken by any substantial interval for dinner, His Majesty's Government are advised that such an arrangement would not, generally speaking, be conducive to the health and welfare of the workers and ought not to be encouraged; in any case they are of opinion that (subject to the observance of any conditions imposed by the Factories Acts for the protection of the health of women and young persons) the adjustment of the hours of the working day is a matter which should be left to the employers and workers in the different industries and localities to settle for themselves and that any Government intervention would be undesirable.

Ratification by Australia

The ratification by Australia of the Draft Convention for establishing facilities for finding employment for seamen, adopted by the Second Session of the International Labour Conference at Genoa in 1920, was registered by the Secretary General of the League of Nations on August 3, 1925. This is the first ratification by Australia of an International Labour Convention adopted under Part XIII of the Treaty of Versailles. It is the eleventh ratification of the Convention in question, the other ten States which have thus formally adhered to it being: Belgium, Bulgaria, Esthonia, Finland, Germany, Italy, Japan, Norway, Poland, and Sweden.

ACCIDENT RATES IN QUARRIES AND METALLURGICAL WORKS IN UNITED STATES

A report of the United States Bureau of Mines on quarry accidents in the United States during the calendar year 1923 states that the reports for that year covered 92,455 employees, who worked 25,545,859 shifts, an average of 276 workdays per man. Accidents during the year killed 143 men and injured 14,990, indicating a fatality rate of 1.68, and an injury rate of 176 per thousand full-time (300-day) workers. The corresponding rates for 1922 were 1.92 killed and 172 injured; for the five-year period 1916-1920 similar rates were 2.10 killed and 160 injured. The principal causes of accidents resulting in death to employees inside the quarries were falls or slides of rock or overburden, haulage, explosives, and falls of persons, while accidents resulting fatally to the employees at the outside plants were due mainly to machinery, haulage, falling objects, falls of persons, and burns.

A report published by the same Bureau on accidents at metallurgical works in the United States in 1923 shows a total of 54,418 men employed during 1923 at ore-dressing plants, smelters, and auxiliary works; the men performed 18,047,774 days of labour, an average of 332 days per man. The number of shifts worked was 4,245,456 in excess of the number reported for 1922. Accidents during the year killed 58 men and injured 8,476, indicating a fatality rate of 0.96 and an injury rate of 141 per thousand full-time (300-day) workers. For 1922 the corresponding rates were 0.98 and 145, respectively. The accident rates for 1923 may be segregated as follows: For mills, the rates per thousand full-time workers were 1.55 killed and 168 injured; for smelters, 0.64 killed and 131 injured; for auxiliary work, 0.94 killed and 132 injured.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF AUGUST, 1925, AS REPORTED BY EMPLOYERS

THERE was, on the whole, a slight slowing up of industrial activity at the beginning of August, according to reports tabulated by the Dominion Bureau of Statistics from 5,855 firms, who employed 791,227 persons, or 5,141 less than in the preceding month. The index number stood at 96.3, as compared with 96.8 on July 1, 1925, and with 94.7, 100.2, 93.1 and 88.9 on August 1, 1924, 1923, 1922 and 1921, respectively. This decline, which is the first to be recorded since the beginning of the year, affected less than half as many

and iron and steel, lumber, textile and fish canning factories also reported reductions. Those in the last-named were of a seasonal character. On the other hand, railway construction, hotels and petroleum works registered increased activity. Statements were received from 534 employers, whose staffs declined from 73,976 on July 1, to 68,452 at the beginning of August. Although increases on a very much smaller scale had been indicated on August 1, 1924, the index number was higher this year.

workers as that indicated on August 1, 1924, and was partly due to temporary shutdowns for holidays and inventories in factories, particularly in automobile works. Marked curtailment of highway construction in the Maritime Provinces also contributed largely to the losses. Agriculture is not represented in these statistics; they therefore do not reflect the important increases in employment recently afforded in that industry, which has absorbed many more workers than have been laid off from the industries included in the index. The harvest demands upon the labour market are a factor in the reduction which are usually reported at the beginning of September.

The accompanying chart illustrates the course of employment since 1923, showing that the situation at the beginning of August was better than on that date in 1924, although it was not as good as on August 1, 1923.

Employment by Provinces

Quebec, the Prairie Provinces and British Columbia registered improvement, while in the Maritime Provinces and Ontario there were declines.

Maritime Provinces.—Employment on highway construction showed a large falling off

Quebec.—Expansion in transportation, building and highway construction, textiles, electric current, rubber, lumber, communication and wholesale trade, was largely offset by losses in railway construction, iron and steel works and logging. Pulp and paper mills also recorded decreases, though on a much smaller scale. The result was an increase of 190 in the payrolls of the 1,255 firms making returns, who employed 222,337 persons on August 1. A reduction of 2 per cent had been noted on that date of last year, when the situation was less favourable.

Ontario.—Apart from the heavy losses recorded in iron and steel plants, particularly automobile works, there was an upward movement in manufacturing; lumber, leather, boot and shoe, edible plant product, rubber and electric current factories reported improvement. Mining, communication, transportation, building and highway construction also registered increased activity, but logging and railway construction showed curtailment. A combined working force of 321,702 was recorded by the 2,641 employers reporting, as compared with 325,211 on July 1. This contraction is somewhat smaller than that indi-

cated at the beginning of August, 1924, and the index number then was very slightly lower.

Prairie Provinces.—In contrast with the large decrease in employment registered on the same date of last year, there was an increase of 1,519 persons in the staffs of the 764 firms reporting on August 1. They employed 103,447 workers. Iron and steel, lumber and food factories, mining, communication, steam railway operation, highway construction and trade afforded more work, while local transportation and railway construction showed some curtailment.

British Columbia.—Further improvement was indicated in this province, where manufacturing, transportation, logging and trade recorded larger payrolls than in the preceding month. Within the manufacturing group, food and iron and steel works registered the largest increases. Reports were tabulated from 662 British Columbian firms having 75,290 employees, or 2,184 more than on July 1. Much smaller declines were noted at the beginning of August, 1924, and the index number then was below its level this year.

The following table gives index numbers of employment in the five economic areas into which the country is divided in these statistics.

TABLE I.—EMPLOYMENT BY ECONOMIC AREAS
(Number employed, by reporting firms in January, 1920=100)

District	Relative Weight	August 1, 1925	July 1, 1925	August 1, 1924	August 1, 1923	August 1, 1922	August 1, 1921
Maritime Provinces	8.7	92.2	99.4	90.2	97.8	94.0	91.2
Quebec.....	28.1	101.1	101.1	98.7	101.9	90.3	87.8
Ontario.....	40.6	90.8	91.8	90.3	97.1	90.8	85.0
Prairie Provinces.	13.1	97.3	95.9	96.4	104.3	101.5	97.5
British Columbia..	9.5	112.2	108.0	107.1	107.2	99.8	96.3
Canada.....	100.0	96.3	96.8	94.7	100.2	93.1	88.9

Employment by Cities

Of the eight cities for which separate tabulations are made, three—Ottawa, Hamilton and Windsor—recorded reduced activity, while employment increased in Montreal, Quebec, Toronto, Winnipeg and Vancouver.

Montreal.—Within the manufacturing group, electric current, rubber and textile factories reported additions to payrolls, which were more than offset by reductions in iron and steel, lumber and food factories. Construction showed large increases and there was also improvement in communication, transportation and wholesale establishments. The working force of the 671 firms making

returns included 109,530 persons, as against 108,303 on July 1. Employment was on a higher level than at the beginning of August, 1924.

Quebec.—Firms in Quebec reported practically no change on the whole, 89 of them employing 8,739 persons, or 26 more than in the preceding month. Shipping was more active, while there were losses in manufacturing.

Toronto.—Transportation, communication, and leather factories registered increased employment, but declines that partly offset this improvement took place in textile and iron and steel plants. The result was a gain of 105 in the staffs of the 761 employers reporting; they had 94,512 employees on August 1. The situation in Toronto was better than at the same time last year.

Ottawa.—Manufactures generally were slightly less fully employed, while construction was rather busier. The 118 firms making returns had 10,370 persons on payroll, as compared with 10,440 in their last report. Reductions on a somewhat larger scale were noted on August 1, 1924, but the index number then was a little higher.

Hamilton.—Iron and steel works recorded losses in personnel and there were also smaller decreases in several other manufacturing groups. A combined staff of 25,716 persons was employed by the 195 firms whose statistics were tabulated; they had 26,054 persons in their employ at the beginning of July. This decline was very slightly smaller than that which was indicated on August 1 of a year ago, when the index number was several points lower.

Windsor.—Heavy contractions were registered in Windsor on account of the closing of large automobile factory for holidays and inventory. Very little change was shown in other industries. Statements were received from 77 employers having 6,218 workers, or 2,692 less than in the preceding month.

Winnipeg.—Manufacturing generally showed moderately increased activity and there was considerable improvement in trade. The payrolls of the 284 firms whose statistics are included aggregated 24,587 persons; on July 1 they had 23,990 workers. Insignificant gains had been noted at the beginning of August, 1924, when the index number was slightly lower.

Vancouver.—A further large increase was recorded in this city. Manufacturing, especially of food products, transportation and trade registered the greatest improvement. On the other hand, construction was not quite

as brisk. Returns compiled from 233 employers showed that they had 24,259 persons on payroll, or 906 more than at the beginning of July. This increase largely exceeded that indicated on August 1 of last year; the situation then was much less favourable.

The following table gives index numbers of employment by cities.

TABLE II—EMPLOYMENT BY CITIES

(Number Employed by the reporting firms in Jan. 1920=100)

City	Relative Weight	August 1, 1925	July 1, 1925	August 1, 1924	August 1, 1923	August 1, 1922
Montreal.....	13.8	97.0	95.7	95.1	97.3	88.6
Quebec.....	1.1	98.8	98.9	96.9
Toronto.....	11.9	87.7	87.6	83.9	89.1	88.1
Ottawa.....	1.3	100.2	100.5	101.6	109.3
Hamilton.....	3.2	84.8	86.0	80.9	93.3
Windsor.....	0.8	59.0	87.1
Winnipeg.....	3.1	87.7	85.6	85.5	91.0	96.5
Vancouver.....	3.1	111.4	106.5	102.3	103.6	98.3

Manufacturing Industries

The trend of employment in manufacturing was downward, repeating the movement noted at this time of last year and of 1923. The decline was, however, only about half as large as on August 1, 1924. The reduction was due almost entirely to contractions in iron and steel, mainly in automobile factories, where they represented shut downs for holidays and inventories. Pulp and paper works also showed a falling off in activity. On the other hand, lumber, fruit and vegetable canning, rubber, textile, tobacco, electric current, non-ferrous metal and petroleum plants afforded more employment than at the beginning of July. Statements were received from 3,797 manufacturers employing 434,738 workers as compared with 438,036 in the preceding month. The index number stood at 88.5, as compared with 86.2 on the same date of last year.

Leather Products.—There was slight improvement in leather and boot and shoe factories at the beginning of August, approximating that noted at the same time in 1924. Employment then, however, was on a higher level. The 190 firms reporting had 15,239 persons in their employ, or 118 more than on July 1. Gains in Ontario were partly offset by reductions in Quebec.

Lumber Products.—Sawmills continued to increase their working forces and match factories were also busier, but the production of furniture showed a falling off. There was expansion in all except the Maritime Provinces. An aggregate working force of 58,279

persons was employed by the 729 firms making returns, who had 57,965 workers in the preceding month. Decreases in employment took place on August 1, 1924, and the index number, then, was several points lower.

Plant Products, Edible.—Further seasonal activity in food and vegetable canneries caused a considerable increase in employment in this group; flour and other cereal mills also reported larger staffs. The greatest improvement was in British Columbia, although all provinces shared in the upward movement. Returns were tabulated from 303 manufacturers, whose payrolls rose from 26,775 on July 1 to 27,533 on the date under review. This situation was practically the same as on August 1 of last year.

Pulp and Paper Products.—Pulp and paper mills showed some curtailment of operations, as did also printing and publishing establishments. The largest declines were noted in Quebec. A combined staff of 51,863 was reported by the 445 firms making returns; in the preceding month they had 52,218 employees. Losses on a smaller scale were registered on August 1, 1924, but the index number then was lower.

Rubber Products.—Further improvement was indicated in rubber factories, continuing the upward tendency that has been in evidence since the first of the year. Employment is in much greater volume than at the beginning of August, 1924, when large contractions were noted. The firms reporting, 29 in number, increased their working forces by 294 persons to 12,673 on the date under review. The additions to staffs were indicated chiefly in Quebec and Ontario.

Textile Products.—Varying conditions were noted within the textile group; woollen yarn and cloth, garment and headwear factories registered heightened activity, while hosiery and knitting, carpet and miscellaneous textile mills were slacker. In Quebec, considerable improvement was recorded, but firms in the Maritime Provinces and Ontario laid off employees. Reports were compiled from 512 employers, having 67,930 employees as compared with 67,826 in the preceding month. Very large contractions were indicated on August 1 of a year ago; the index number then was 9 points lower.

Tobacco, Distilled and Malt Liquors.—Further improvement was noted in this division, 111 persons being added to the staffs of the 99 firms reporting. They had 12,026 employees. Employment in the early part of August, 1924, was in smaller volume.

Clay, Glass and Stone Products.—After five months of uninterrupted gains, this group showed a decline, which however was chiefly seasonal in character. The reduction registered on the same date of last year was somewhat larger. A combined working force of 9,047 persons was employed by the 113 building material manufacturers making returns, who had 9,221 employees at the beginning of July, 1925. Glass factories reported the bulk of the decrease.

Electric Current.—Producers of electric current, mainly in Quebec, but to a less extent in Ontario, registered increased activity; 505 workers were added to the staffs of the 85 firms reporting. They had 12,965 operatives. Increases on a much smaller scale were noted on August 1, 1924, and the index number then was several points lower.

Iron and Steel Products.—There were important declines in vehicle factories, largely in automobile works, that were due to shut downs for holidays and inventories; rolling mills, steel shipyards, and heating appliance works were also slacker. The 633 establishments whose statistics are included, employed 107,061 workers, or 5,290 less than at the beginning of July. This decrease, which took place in the Maritime Provinces, Quebec and Ontario, was slightly less than the reduction indicated on August 1 of last year, but the index number then, was higher.

Non-ferrous Metal Products.—Smelters and refineries, chiefly in British Columbia, afforded considerably more employment than on July 1. Statements were tabulated from 104 manufacturers of non-ferrous metal products, who had 11,264 persons in their employ, as against 10,892 in the preceding month. Contractions affecting approximately the same number of persons as were added to the payrolls on the date under review were recorded at this time last year. The situation at that time was less favourable.

Mineral Products.—Mineral products plants, chiefly in the Maritime Provinces, reported increased activity. The working force of the 70 firms making returns aggregated 10,335 persons, or 127 more than on July 1. A smaller increase took place on August 1, 1924, and employment then was in smaller volume.

Logging

Continued contractions in the employment afforded in logging camps was indicated at the beginning of August, when 2,084 men were released from the staffs of the 209 employers reporting. They had 13,201 workers. The largest reductions took place in Quebec and

Ontario, while there was a slightly upward tendency in British Columbia. On August 1 of last year, greater shrinkage was noted, but the index number was a little higher.

Mining

Coal.—Further moderate improvement was shown in coal mines in the Prairie Provinces. Eighty-nine operators recorded 24,458 employees, as compared with 24,228 on July 1. Considerable losses had been indicated at the beginning of August, 1924, but the situation was rather more favourable at that time.

Metallic Ores.—Metallic ore mines in British Columbia showed a moderate decrease, while in Ontario a small increase was noted. Returns were received from 45 employers, whose staffs declined from 14,051 on July 1 to 13,819 on August 1. On that date of last year, substantial increases took place in this group, with a result that the index number was about 4 points higher than on August 1, 1925.

Non-Metallic Minerals other than Coal.—Rather slight additions to staffs were reported in this division, chiefly in Ontario and British Columbia, where quarrying was more active. The 75 firms making returns had 6,920 persons in their employ on August 1; this was 156 more than in their last report. The situation at the beginning of August, 1924, showed practically no change. Employment then, however, was in less volume than on August 1, 1925.

Communication

Further and more pronounced additions to payrolls were shown in returns from 184 communication firms, whose staffs aggregated 24,163 persons, as against 23,442 on July 1. Telephones and telegraphs shared equally in the gains, which were spread over all the provinces. Increased activity, though on a less extensive scale, was registered at the beginning of August of a year ago. The index number then was 113.9, as compared with 116.1 on August 1, 1925.

Transportation

Steam Railways.—In contrast with the reductions indicated on August 1, 1924, there was substantial improvement on the date under review; nevertheless employment was in smaller volume than it was then. The 103 firms and divisional superintendents from whom statistics were received reported 76,131 employees, or 1,051 more than in the preceding month. Quebec, Ontario and the Prairie Provinces shared in the gains.

Shipping and Stevedoring.—Summer activity in shipping caused a considerable increase in employment at the beginning of August, when 1,251 persons were added to the staffs of the 60 firms reporting. They employed 15,038 men. While Quebec and British Columbia recorded the bulk of the gain, improvement was also indicated in Ontario and the Maritime Provinces. Similar additions to staffs were noted on the same date of last year and the index numbers for the two periods are practically the same.

Construction and Maintenance

Building.—A further and pronounced extension of operations was noted in this division; 304 building contractors enlarged their working forces from 25,784 employees on July 1 to 27,453 at the beginning of August. The most marked expansion was in Quebec and Ontario. This improvement affected more than twice as many workers as that indicated at the beginning of August, 1924, and the index number was higher than at any time of last year.

TABLE III—Index Numbers of Employment by Industries (Number employed by the reporting firms in January, 1920=100)

Industry	*Relative Weight	August 1, 1925	July 1, 1925	August 1, 1924	August 1, 1923	August 1, 1922	August 1, 1921
Manufacturing	54.9	88.5	89.1	86.2	93.5	85.8	81.3

Wholesale.....	2.4	94.8	92.8	96.1	96.4	96.2	98.2
All Industries	100.0	96.3	96.8	94.7	100.2	93.1	88.9

*For explanation of term "relative weight" see note on page 4.

Highway.—Curtailment of the highway construction programme in the Maritime Provinces caused a very pronounced reduction in employment, which, however, was partly offset by increases in Quebec, Ontario and the Prairie Provinces. The result was a decline of 3,346 men in the payrolls of the 118 reporting employers, who had 20,493 workers. Although staffs were largely augmented on August 1, 1924, the index number then was lower than on the date under review.

Railway.—Employment on highway construction and maintenance also declined, 2,287 persons being released by the 37 employers making returns. Their payrolls aggregated 44,521. In the Maritime Provinces, increased activity was shown, but curtailment was indicated in all other provinces except British Columbia, where employment was stationary. Over twice as many men were let out by the railways at the same time last year; employment then, however, was in rather greater volume.

Services

Hotels and Restaurants.—Further gains were registered by summer hotels in all provinces. Statements were received from 70 establish-

ments having 8,963 persons in their employ, as compared with 8,549 in the preceding month. This makes the fifth consecutive increase to be recorded in 1925, and brings the index number to 142.7 as compared with 137.6 in the corresponding month of last year.

Trade

Improvement was indicated in both retail and wholesale trade, the largest gains taking place in the Prairie Provinces and British Columbia. The working force of the 563 employers reporting in the trade group aggregated 56,363, as compared with 55,701 on July 1. This expansion compares with a minor decline at the beginning of August, 1924; the index number in 1925, was over three points higher than it was then.

The accompanying table gives index numbers of employment by industries as at the first of August and July, 1925, as compared with August 1 of the last four years. The columns headed "relative weight" in the tables in this article show the proportion that the number of employees reported in the indicated area or industry bears to the total number of employees reported in Canada by the firms making returns on August 1, 1925.

EMPLOYMENT OFFICE REPORTS FOR JULY, 1925

THE volume of business transacted by the offices of the Employment Service of Canada during the month of July, 1925, showed an increase of two per cent in the average daily placements over that of the preceding period, while an increase of over 18 per cent was registered when compared with the average daily placements effected during the corresponding period of 1924.

The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the office of the Service throughout Canada, the computations being made semi-monthly. It will be seen that the curves of vacancies and placements in relation to applications remained practically on the same level during the first half of July as that reached at the close of June, but showed an upward trend during the balance of the month. In both instances the ratios of vacancies and placements to applications were decidedly higher than those attained during July of last year. The ratio of vacancies to each 100 applications was 76.5 and 82.6 during the first and second half of July, 1925, in contrast with the ratio of 71.8 and

75.4 during the same periods in 1924. The ratio of placements to each 100 applications during the period under review was 70.6 and 74.9, as compared with 68.2 and 66.8 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications recorded during the first half of July was 1,557 as compared with 1,493 during the preceding period, and with 1,464 daily during the corresponding period in 1924. Applications for work during the latter half of the month registered 1,488 daily, in contrast with 1,324 daily during the latter half of July a year ago. Employers notified the Service of a daily average of 1,192 vacancies during the first half and 1,230 during the latter half of the month under review as compared with a daily average of 1,051 and 998 vacancies during the month of July, 1924. Vacancies offered to the Service during the latter half of June 1925 averaged 1,146 daily. The Service effected an average of 1,100 placements during the first half of July, of which 774 were in regular employment and 326 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,056 daily and with 999 daily during the

first half of July, 1924. During the latter half of the month under review placements averaged 1,114 daily (834 regular and 280 casual) as compared with an average of 884 daily during the corresponding period a year ago.

During the month of July 1925 the offices of the Service referred 30,027 persons to vacancies and effected a total of 28,788 placements. Of these the placements in regular employment numbered 20,964, of which 17,221 were of men and 3,743 of women, while placements in casual work totalled 7,824. Opportunities for employment reported by employers numbered 23,035 for men and 8,467 for women, a total of 31,502. The number of applications for work was 39,502, of which 29,361 were from men and 10,141 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (7 months).....	121,181	61,422	182,603

MARITIME PROVINCES

During July 1925 opportunities for employment in Nova Scotia and New Brunswick were slightly less than in June, and over 13 per cent lower than during the corresponding month of last year, according to orders listed at employment offices in these provinces. There was a slight increase over June in the number of orders received at Nova Scotia offices, but this was more than offset by a reduction of about 4 per cent in orders received at New Brunswick offices. Placements through Nova Scotia offices were nearly 3 per cent less than in June, but almost 9 per cent higher than in July, 1924. In New Brunswick a decrease of about 5 per cent over June was reported, and nearly 3 per cent less than in July, 1924. Industries in which most of the placements were effected in Nova Scotia were logging 242; farming 56; construction and maintenance 81; and services 205. The majority of placements by industries in New Brunswick were manufacturing 64; construction and maintenance 72; and services 424. During the month under review 415 men and 49 women were placed in regular employment by Nova Scotia offices, and 160 men and 118 women by offices in New Brunswick.

QUEBEC

Orders received during July were over 6 per cent higher than in June and nearly 45 per cent in excess of July, 1924. Placements were nearly 4 per cent and 26 per cent higher respectively. In all industries except logging, gains were reported over July of last year. In the trade division vacancies and placements were on or about the same level as last year. Industrial divisions in which most of the placements were effected during the month under review were manufacturing 130; logging 131; farming 174; construction and maintenance 734; and services 734. Placements in regular employment during the month numbered 1,267 of men and 718 of women.

ONTARIO

Opportunities for employment as listed at employment offices in Ontario during July were over 11 per cent less than in June, and nearly 4 per cent less than during the corresponding month of last year. Placements, however, were on the same level as last year, but nearly 8 per cent lower than in June. When comparing vacancies and placements during the current month with July, 1924, by industrial divisions, substantial gains are noted in manufacturing industries, transportation and trade, offset by reduced activity in logging, farming and services. Placements during July by industrial groups were manufacturing, 1,335; logging 429; farming 1,997; transportation 906; construction and maintenance 2,649; services 2,990; and trade 370. There were during the month 6,339 placements of men and 1,191 placements of women in regular employment.

MANITOBA

There was an increase of over 43 per cent in the number of vacancies listed during July over the preceding month, and nearly 46 per cent more than during the corresponding month of last year. Placements were more than 38 per cent higher in June and nearly 39 per cent higher than in July, 1924. A large increase in farm orders during the month under review was mainly responsible for the changes recorded in both comparisons. Industrial divisions in which most of the placements were effected were manufacturing industries, 201; farming, 1,431; construction and maintenance, 262; and services, 1,603. Placements in regular employment numbered 1,752 of men and 603 of women.

SASKATCHEWAN

The number of vacancies listed during July were nearly 37 per cent higher than in June and more than 72 per cent higher than in July, 1924. Placements were nearly 25 per

cent and about 62 per cent higher respectively. The harvest demand which is earlier this year than last was mainly responsible for the increases in both comparisons, although additional orders for railway construction labourers and workers in the service group were also recorded. Industrial divisions in which most of the placements were effected during the month were manufacturing, 92;

and 24 per cent higher than in July, 1924. Placements were over 12 per cent heavier than in June and nearly 17 per cent larger than in July of last year. In both comparisons, gains were recorded in the manufacturing industries, mining, transportation, construction and maintenance, and services, offset in part by reductions in farming. Declines were also recorded in logging and trade from July of

farming, 1,504; construction and maintenance, 599; and services, 783. Placements in regular employment numbered 2,201 of men and 342 of women.

ALBERTA

Orders listed by Alberta offices during July were nearly 21 per cent higher than in the preceding month, and about 45 per cent greater than in July of last year. Placements were nearly 16 per cent heavier than in June, and about 45 per cent more than in July, 1924. All industrial divisions except logging and services participated in the gains over July, 1924, that in farming being the most pronounced. Industrial groups in which employment was secured for most applicants were manufacturing, 236; farming, 1,930; construction and maintenance, 594 and services, 771. During the month there were 2,820 placements of men and 406 placements of women in regular employment.

BRITISH COLUMBIA

Opportunities for employment during July were over 18 per cent higher than in June

last year, but for these groups an increase over June, 1925, was reported. Industrial groups in which most of the placements were effected during the month were manufacturing, 666, of which 349 were in sawmills; logging, 332; farming, 463; mining, 107; transportation, 181; construction and maintenance, 1,023; services, 1,084; and trade, 130. Placements in regular employment numbered 2,267 of men and 316 of women.

Movement of Labour

During July, 1925, the offices of the Employment Service of Canada made 20,964 placements in regular employment, of which 12,907 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,281 were granted the Employment Service reduced transportation rate, 1,005 going to points within the same province as the despatching office and 276 to other provinces.

Quebec offices granted 155 special rate certificates, 98 of which were provincial and 57

interprovincial. Provincial certificates were issued by the Quebec office to 49 construction labourers, and by the Montreal office to 49 mill hands travelling to points within their respective zones. Of the interprovincial transfers 19 were to bushmen sent by the Hull office to North Bay and 38 to bushmen transferred from Montreal to Sault Ste. Marie. In Ontario, 82 certificates were issued, 72 for points within the province and the remainder for Manitoba, the latter being for farm hands going from Fort William to the Winnipeg zone. Of the provincial transfers Sudbury issued 7 to farm hands going to Guelph and 10 to bushmen going to points within its own zone; Pembroke shipped 8 mill hands, one engineer and one cookee to North Bay, one cook to Belleville and one millwright to Timmins. From Toronto one marine cook was despatched to Sarnia, 3 mill hands to North Bay and 3 farm hands to Ottawa. Port Arthur sent 7 loggers and 25 farm hands and Fort William one bushman and 2 farm labourers to points within their own zones. Peterborough transferred one bushman to Sudbury. Winnipeg, which was the only Manitoba office to grant certificates, transferred 425 persons, 275 to points within the province and 150 to other provinces. To Brandon were despatched 193 farm hands, 13 hotel workers, 3 cooks, 5 farm domestics, 3 teamsters and one road worker, to Dauphin one farm worker, one housekeeper and one baker, and to points within the Winnipeg zone 45 farm workers, 5 farm generals, 2 hotel cooks, one cleaner and one domestic. Transfers to the province of Saskatchewan numbered 130 of which 108 were for farm hands, 9 for farm housekeepers, 3 for cooks, 2 for hotel workers, 2 for blacksmiths, 5 for teamsters and one for an engineer. To Alberta Winnipeg sent 5 farm workers and 2 farm housekeepers, and to Ontario 4 sawmill labourers, 8 bushmen and one cook. Saskatchewan offices issued 177 certificates, 169 provincial and 8 interprovincial. Of the latter Lethbridge received 4 farm labourers, Brandon one farm labourer and Winnipeg 2 carpenters from Regina, and Edmonton received one housekeeper from Saskatoon. Of the provincial transfers Saskatoon issued certificates to 53 bushmen travelling to Prince Albert, 13 railroad construction teamsters to North Battleford, one carpenter to Regina, 2 farm labourers to Yorkton and 38 farm workers, one teamster, one hotel cook, 10 railroad construction workers, 2 farm domestics, and one cook to points within its zone. Moose Jaw sent 10 farm labourers and Prince Albert 6 bushmen and one cook to points within their respective zones. From Regina 5 farm workers and 7 teamsters travelled to Moose Jaw, one carpenter and one

dumpman to Saskatoon, one housekeeper and one waitress to Estevan, one farm worker to Swift Current, 2 bushmen to Prince Albert, 4 farm workers to Weyburn and 6 farm labourers and one teamster to points within its own zone. In Alberta the transportation certificates issued numbered 266, of which 239 were provincial and 27 interprovincial. Of the interprovincial certificates Edmonton sent 25 farm hands to Saskatoon and one chambermaid to North Battleford and Calgary transferred one berry picker to Vancouver. The provincial movement included 58 farm, building and railway construction labourers, 2 cooks, 2 hotel workers, one farm housekeeper, 12 teamsters, one blacksmith, one recreational worker and 2 carpenters travelling from Calgary, the majority to points in the vicinity of Drumheller and Calgary. Edmonton transferred 101 farm and railway construction labourers, 2 porters, 20 bush and sawmill workers, 3 firemen, 8 miners, 7 cooks, 3 engineers, one storekeeper, one gardener, one dairyman, 2 blacksmiths, one waitress, one kitchen worker, one machinist and one electrician to points within its zone, 4 farm workers and 2 labourers to Calgary and 1 farm labourer to Drumheller. British Columbia offices issued 176 special rate certificates, 152 for points within the province and 24 to outside points. Of the latter, Vancouver granted certificates to 6 farm workers and one housekeeper travelling to Saskatchewan, 8 farm workers, one cook and one nurse travelling to Alberta and one farm worker to Manitoba. Vernon sent 2 axemen to Swift Current. Revelstoke and Prince Rupert each despatched one farm worker to Saskatoon, and Victoria one domestic to Saskatoon and one farm worker to Calgary. Of the movement within the province Kamloops transferred 6 berry pickers, 2 to Vancouver, 2 to Prince George and 2 within its own zone, Prince Rupert 5 bushmen, one cook and 2 choremen within its zone, Nelson 3 mill labourers and one general within its zone, New Westminster 2 factory workers to Penticton, Prince George one planer tailer, one carpenter, 9 labourers and 29 bush workers to points within its zone, and 7 axemen, one cook, one flunkey and one foreman to Kamloops. In addition, the Vancouver offices issued certificates to 25 miners, 4 bricklayers, 4 electrical workers, 5 cooks, 2 farm workers, 4 sawmill workers, 2 surveyors, 3 hotel workers, one engineer, 9 labourers, 8 fruit pickers, 3 teamsters, one housekeeper, one hoistman, 2 blacksmiths, 2 flunkies, one crusherman, 2 dishwashers, one baker and 2 station men, the majority of whom were going to points in the Vancouver, Nelson and Kamloops zones.

Of the 1,281 workers who benefited by the Employment Service reduced transportation rate, 613 were carried by the Canadian National Railway, 651 by the Canadian Pacific Railway and 17 by the Pacific Great Eastern Railway.

BUILDING PERMITS ISSUED DURING JULY, 1925

THERE was a further decrease in the value of the building authorized in 60 cities in July, when the building permits issued aggregated \$12,637,551, as compared with \$14,651,613 in June, a decline of 13.7 per cent. The experience of the last 16 years shows, however, that a reduction is usually indicated in July as compared with June. In the more significant comparison with July of last year, there was an increase of \$1,111,235, or 9.6 per cent; the total for that month was \$11,526,316.

Detailed statements were furnished by some 50 cities, showing that they had issued over 1,300 permits for dwellings estimated to cost more than \$5,500,000 and nearly 2,700 permits for other buildings at a proposed cost of approximately \$7,000,000.

The only province to show an increase over June, 1925, was Quebec; the aggregate there was higher by \$313,605, or 6.9 per cent than in the preceding month. British Columbia recorded the greatest actual reduction of \$979,936 or 44.5 per cent, while the largest proportional loss of \$152,695, or 83.8 per cent was in New Brunswick.

Nova Scotia, Quebec, Ontario, Manitoba and British Columbia registered higher totals of building authorized than in July, 1924. The largest gain, of \$1,224,065, or 33.6 per cent, was in Quebec. New Brunswick showed the most pronounced decrease of \$770,006 or 96.3 per cent.

Montreal issued permits at a higher valuation than in either June, 1925, or July, 1924, while in Toronto, Winnipeg and Vancouver there were declines in the former and increases in the latter comparison. Moncton, Quebec, Sherbrooke, London, Ottawa, St. Catharines, St. Thomas, Windsor, Lethbridge, Nanaimo, New Westminster and South Vancouver showed improvement over the preceding month and also in comparison with the corresponding month of last year.

Cumulative Record for First Seven Months, 1925.—The building permits issued in 60 cities from January to July of this year authorized building of an estimated value of \$77,300,400 as compared with \$71,383,847 in 1924, \$85,882,727 in 1923, \$86,840,512 in 1922, \$66,394,841 in

1921 and \$75,373,684 in 1920. The increase over 1924 was 8.3 per cent over 1921, 16.4 per cent and over 1920, 2.6 per cent, while there were declines of 10 and 11 per cent as compared with 1923 and 1922, respectively, when, however, building costs were higher. The Bureau's weighted index number of wholesale prices of building materials averaged 154.1

during the first seven months of 1925, as compared with 163.8 in 1924, 166.7 in 1923, 161.5 in 1922, 194.5 in 1921 and 215.3 in 1920.

The accompanying table gives the value of building permits issued in 60 cities during June and July, 1925, and July, 1924. The 35 cities for which records are available since 1910 are marked with asterisks.

REPORT OF AUSTRALIAN COMMISSION ON NATIONAL INSURANCE

A Royal Commission appointed by the Government of the Australian Commonwealth to investigate the subject of a scheme of national insurance makes the following interim recommendations:—

Sick pay of 30 shillings per week during the first six months of incapacity.

Invalid benefit of 20 shillings per week after the first six months of incapacity.

Maternity benefit, being a weekly allowance for two weeks prior and four weeks after confinement.

Superannuation benefit of 20 shillings per week to be paid to males after attainment of 65 and females after attainment of 60.

Child allowance of 5 shillings per week in respect of each dependent child under age of 16 to be paid during parents' incapacity.

The Commission was also instructed to inquire into unemployment insurance, but this subject is not touched in their first report.

The estimated total number of wage- and salary-earners in Australia at June 30, 1924, was 1,648,000, comprising 1,278,000 males between the ages of 16 and 65 and 370,000 females between the ages of 16 and 60. The estimated average adult wages for a full week's work were £4 14s. 3d. and £2 10s. for males and females, respectively.

Dealing with existing forms of protection against the risk of sickness the Commission states that out of 1,648,000 wage-earners only some 524,000 have made voluntary provision through friendly societies, while there appears some tendency for the proportion of workers so protected to diminish. The average period of sickness was found to be approximately ten days per annum, entailing a loss of wages throughout Australia for males totalling over £7,500,000, and for females over £800,000, making a total loss of at least £8,300,000 in one year, against which the joint efforts of all friendly societies contributed only some £560,000.

The Commission further recommends that workmen's compensation should be included in the National Insurance scheme. (At present the Commonwealth Invalid and Old Age

Pensions Act provides 17s. 6d. per week during permanent incapacity to work subject to certain property and income qualifications).

The *Australasian Insurance and Banking Record*, discussing the Commission's report, says:—"While the weekly costs of benefits for males and females at age 20 are 2s. and 2s. 7.5d., respectively, there is a rapid increase in the case of females, so that at age at entry 40, the female contributions are over 70 per cent more than the male. The great divergence is caused by the female superannuation benefit starting at age 60 (instead of 65 as in case of males) and contributions ceasing at the younger age in consequence. If the proposed scheme reaches the realm of practical politics it will be a matter for serious consideration whether male and female superannuation benefits should not both start at age 65, while the admitted lower rate of female earnings will suggest that lower rates of benefit will be more suitable for their pockets. Unfortunately, the question of the expense of administering the scheme has so far received scant attention at the hands of the Commission. If the English scheme is to be any guide, the expenses of administering the benefits recommended will require at least one-third to be added to the contributions referred to above. In considering what has been done in England it must also not be forgotten that a considerable amount of expense is not directly paid for—it forms part of the employers' expense of conducting his business and is not shown in any accounts submitted. There is also considerable uncertainty as to the expense borne by the central Government. That the administration of the benefits proposed must be relatively expensive is evident from their nature—collection of contributions and payment of benefits at very frequent intervals and the absolute necessity for adequate personal supervision of the sick and invalidity payments to prevent malingering."

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Animal Foods

VANCOUVER, BRITISH COLUMBIA.—FRASER VALLEY MILK PRODUCERS' ASSOCIATION AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFERS, STABLEMEN AND HELPERS, LOCAL No. 464, MILK DRIVERS AND DAIRY EMPLOYEES.

Agreement to be in effect from June 15, 1925, until June 15, 1926, and thereafter unless thirty days' notice of change be given.

Union members shall be employed as a rule. Non-Union employees shall receive union wages and apply for membership within two weeks of employment. This shall not be refused owing to a union man being out of employment.

If a route becomes vacant employees of not less than six months' standing shall be given preference of change over new employees.

The employer may discharge employees for certain specified causes. The employer agrees to supply aprons. There shall be no discrimination against union men.

One day off in seven or one week off in seven weeks, as decided by the employer. A driver's day's work shall be considered over when he has finished his route.

If an employee's holidays have to be postponed he may request payment for time due and the employer agrees to meet all reasonable requests.

Help other than drivers, eight hours work per day. Overtime, time and one-half.

In case of accidents men shall be given a fair hearing.

The Union agrees to further the interests of the employer. The employer will notify new employees to sign this agreement within 30 days of employment.

Seven days' notice shall be given of discharge or leaving work.

Employees must attend certain meetings to discuss problems of interest to dairy salesmen.

In case of a breakdown employer shall not be compelled to pay overtime, except to men standing by and so at work longer than 8 hours. No lay-off to be less than 2 hours.

In event of a strike in another firm employees are not to be asked to perform extra work, and will perform their usual work as if a strike did not exist.

The minimum monthly scale varies with amount of

load, from \$100 per month for salesmen where load amounts to \$600, to \$130 per month where load amounts to \$1,001.

Loads over \$1,001 shall receive 3 per cent commission on sales over \$1,001. On all butter sales commission shall be 1 cent per pound retail and $\frac{1}{2}$ cent per pound wholesale.

If a load is split the driver's wages shall not be changed for three months.

Wages in other occupations, per month—truck drivers, \$130; truck helpers, stable helpers and all other inside help, \$120; checkers, \$125; inside relief men, \$125; outside relief men, \$150.

New employees shall be paid 20 dollars less than above rates, and regular scale after six months.

New men on routes shall not be paid for the first three days' learning.

No wages shall be reduced or hours increased because of the agreement. This shall not apply to salesmen or to any one connected with the routes.

No cessation of work, lockouts or sympathetic strikes during the agreement.

If necessary, controversies shall be submitted to arbitration by a board of one from each side and a third selected by them.

Manufacturing: Vegetable Foods, Drink and Tobacco

MONTREAL, QUEBEC.—CERTAIN LOCAL EMPLOYERS AND BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL No. 115.

Agreement to be in effect from May 1, 1925, until May 1, 1926.

Only union members are to be employed.

The employer agrees not to board any journeymen or confectioners.

If the employer desires two sets of employees, not more than 8½ hours are to be worked per day.

To every first class hand there must be a second and third, and not more than one helper to each set.

Six days' work per week: 8½ hours per day. Half an hour for lunch.

Minimum wage per week: first hand, \$41; second hand, \$38. Overtime rate, 85 cents per hour.

Union labels must be used.

Union representative may inspect the work shop at any time.

Wages paid at end of week. Only the employer may dismiss employees, and one week's notice must be given.

The employers agree to pay for all the Hebrew holidays except Easter.

The employer must keep a clean and sanitary shop. The employees may take home a loaf of bread each day. A helper must be allowed at any time.

The first of May and Labour day shall be recognized as legal holidays.

Where there are no machines, only one batch of dough shall be made during a shift, this not to contain more than enough to make up 500 single loaves.

Manufacturing: Iron, Steel and Products

POR T HOPE, ONTARIO.—CERTAIN EMPLOYERS AND INTERNATIONAL MOULDERS' UNION, LOCAL No. 189.

Agreement to be in effect from May 1, 1925, until May 1, 1926.

Wages for day work, 90 cents per hour. Wages for piece work, 45 per cent added to Board price. Hours, eight per day. Overtime, time and one-half; Sundays and legal holidays, double time.

Manufacturing: Printing and Publishing

SASKATOON, SASKATCHEWAN.—CERTAIN LOCAL FIRMS AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, No. 206.

Agreement in effect from October 31, 1924, until October 1, 1925.

The agreement expiring October 31, 1924, is to remain in force until October 31, 1925, excepting that the apprentice scale for the webb pressrooms, fourth year, shall be 68 per cent in place of 78 per cent, and apprentice scale for cylinder presses, third year, shall be 70 per cent in place of 75 per cent.

The previous agreement was as follows:—

Hours per week, in webb pressrooms, 48 day work; 45 night work. In job pressrooms, 44 hours; day shifts, eight hours per day for five days and four on Saturdays. Night shift, Sundays, 6½ hours; following five nights, 7½ hours each.

Minimum scale per week:—

Webb pressrooms, pressmen in charge, \$5 over journeyman scale; journeyman (night), \$47; journeymen (day) \$44. Assistant, 1st year 33½ per cent of journeyman's scale; 2nd year, 42 per cent; 3rd year, 53 per cent; 4th year, 78 per cent, 5th year, 80 per cent.

Job pressrooms—Platen presses, journeyman, \$37.50. Cylinder presses: journeyman (night), \$45.98; journeyman (day), \$40.35; assistant, 1st year, 40 per cent of journeyman's scale; 2nd year, 50 per cent; 3rd year, 75 per cent; 4th year, 80 per cent. Feeder, 2nd year, 33½ per cent. Pressmen on offset presses, \$46.

Apprentices to serve four years, each being a feeder of at least two years. One apprentice for up to four journeymen.

Work to begin and end at set times.

The foreman is to have complete charge of the pressroom, and to employ and discharge help.

An employee quitting work or failing to keep an engagement without notice or without supplying a substitute shall be disciplined by the Union.

In absence of foreman and pressman in charge no feeder shall operate any press before or after regular working hours.

Overtime, time and one-half. Sundays and holidays, double time.

Construction: Buildings and Structure

QUEBEC, QUEBEC.—CERTAIN LOCAL CONTRACTORS AND THE NATIONAL CATHOLIC UNION OF PAINTERS.

Agreement to be in effect from May 1, 1925, until April 30, 1926, and for another year unless 30 days' notice of change or cancellation is given.

The Union undertakes to furnish each employer signing the agreement with painters as required; that the men will not quit work in case of a dispute without using all efforts at conciliation and arbitration; and to work according to standard hours of labour.

Each employer signing the agreement agrees to employ only union members; to pay a minimum wage of 43 cents per hour; and not to lock out employees without having exhausted all means of conciliation.

OTTAWA, ONTARIO.—OTTAWA MASTER PLUMBERS' ASSOCIATION AND UNITED ASSOCIATION OF JOURNEYMEN PLUMBERS AND STEAMFITTERS, No. 71.

Agreement to be in effect from August 1, 1925, until April 30, 1927, and from year to year unless notice of change is given not later than January 2 of any year.

Hours of labour, 8 a.m. to 5 p.m., with one hour for lunch for five days. On Saturdays, from 8 a.m. to 12 noon.

Minimum wage per hour, 85 cents.

Overtime, time and one-half; after midnight, and Sundays and holidays, double time.

Men working out of Ottawa shall have fare and board paid, and travelling time paid for at rate of single time only up to 9 p.m. If travelling at night, a sleeper to be provided.

A man reporting for work, not having been previously laid off, and finding no work, shall receive ½ day's pay.

The employers agree to use efforts that all employed shall be union members, if such are available. Union to use efforts that members shall work at trade only for members of the Association, provided the latter give them work.

Apprentices are to serve four years and pass an examination, after which they may work for employers for one year at not less than 45 cents per hour for first six months, and 55 cents for second six months. After this they shall pass a final examination after which they may become journeymen.

No more than one apprentice for each three journeymen from each shop may apply for final examination during a year.

One apprentice only may be employed for each steam fitter and plumber.

Grievances that cannot be adjusted by the parties shall be referred to a Joint Arbitration Board of three from each side. If this cannot then be settled matter must be referred to the general office of the United Association, and no strike or lockout shall take place until matter has been investigated.

No member may sub-contract or work at the trade after regular working hours.

TORONTO, ONTARIO.—TORONTO LOCAL OF DISTRICT No. 4, INTERNATIONAL CUT STONE CONTRACTORS' AND QUARRYMEN'S ASSOCIATION, INC., AND TORONTO LOCAL OF JOURNEYMEN STONECUTTERS' ASSOCIATION OF NORTH AMERICA.

Agreement to be in effect from May 1, 1925, until April 30, 1926, with one month's notice of change prior to expiration of agreement.

While union can provide help only union men are to be employed.

Wages per hour, \$1.00. Wages to be paid weekly with not more than one day kept on hand.

Hours per day, 8 with exception of Saturday, when 4 hours shall be worked. Lunch hours and working time (not to exceed 44 hours per week) to be arranged.

Overtime (only in cases of necessity), first two hours, time and one-half; thereafter, double time.

Provision is to be made for protection of stonecutters from sun and weather.

Certain holidays shall be observed, others being optional.

Differences which arise are to be arbitrated without strike or lockout. Each party is to elect three of their number to form an Arbitration Committee. In failure to agree these shall select an umpire not affiliated with the trade, whose decision shall be binding.

The foreman shall be selected by the employer.

One apprentice may be employed for each five journeymen. In no case shall there be more than three to a shop. Apprentices shall serve four years at wages as mutually agreed, starting between ages of 16 and 20 years.

No person may interfere with workmen during working hours. Employers may employ and discharge whomever they see fit. Workmen may work for whomever they see fit.

Board and railway fare will be allowed a man sent out of town, also car fares to a man sent to a building during working hours.

This agreement is subject to any change in agreement between the cut stone contractors' and Quarrymen's Association and the International Journeymen Stonecutters' Association of North America.

Transportation of Public Utilities

MONTREAL, QUEBEC.—HARBOUR COMMISSIONERS OF MONTREAL AND THE HARBOUR UNION OF MONTREAL.

These rates are to apply to employees of the grain elevator system, construction forces, machine shop and ship yard, harbour yard shops and electrical department from May 1, 1925, until May 1, 1926, and to other employees from May 1, 1925, until the close of navigation, season of 1925.

Wages per hour—Grain elevators nos. 1, 2, 3 and "B"—millwrights, 66 cents; weighmen, assistant millwright, distributors, tripper men, 60 cents; feed tenders, machinery men, marine leg men, tower men, 55 cents; shovellers, 52 cents; carpenter, 50 cents; oilers, helpers, sewers and baggers, 49 cents; car dumper operators, elevator "B," 58 cents (to do own maintenance); grain boat men (unloading) to be paid 5 cents an hour additional after 10 hours work. Conveyor system: assistant foremen, 60 cents; millwright, 66 cents; rope splicer, 60 cents; feed tenders, main tower men, 55 cents; conveyor men, 49 cents.

Harbour yard shops and marine shops: millwrights, plumber and coppersmith, 66 cents; machinists, blacksmiths, boilermakers, 63 cents; helpers of blacksmiths and machinists, and general helpers, 42 cents; labourers, 38 cents; carpenters, 61 cents; 2nd class boilermakers, 48 cents; assistant plumber, 49 cents; shop painters, 55 cents.

Traffic shop: fitters, 65 cents; patternmaker, 68 cents; boilermakers, 63 cents; painter, 60 cents; helpers, 42 cents; labourers, 38 cents.

Construction forces: crane engineers, 64 cents; crane firemen, 44 cents; crane blockmen, 40 cents; locomotive engineers, 64 cents; locomotive firemen, 44 cents; locomotive helper, 44 cents; painters, 46 cents; switchmen, 49 cents; iron workers, 52 cents; car inspector, 62 cents; carpenters, 61 cents; plumbers, concrete mixer runner, 60 cents; assistant plumbers, 49 cents; labourers, 40 cents.

Electrical department: 1st class linemen, 63½ cents; 2nd class linemen, 50 cents; groundmen, 42 cents; lamp trimmers, 50 cents; shift operators, 55 cents; floormen, 50 cents; motor tenders, 50 cents; helpers, 42 cents; hoistmen, 46 cents; bondermen, 50 cents; bonder helper, 42 cents; labourer, 40 cents; journeymen, 58 cents.

Emergency work on Sundays and legal holidays, time and one-half.

No overtime pay for day and night watchmen on Sundays and holidays.

Working conditions.—Elevator employees (including those in conveyor galleries):—

Hours, ten per day until December 15, from December 15 until opening of navigation 1926, 8 hours per day; time and one-half after the ninth hour.

Hourly men working overtime and Sundays and legal holidays, time and one-half. Men called to work Sunday morning for a short time will be paid for 5 hours.

At close of navigation the Superintendent shall tell men laid off at what time services will be required.

With the exception of car shovellers, men working in elevators and galleries will not be asked to unload boats.

Work will be done Sunday night after 6 p.m. only in cases of emergency.

Employees of machine shop, Notre Dame Street, and machine shop, Guard Pier:—

Hours of labour, 9 per day, 5 on Saturdays. Overtime after the ninth hour and afternoon on Saturdays. Traffic shop: Work on Saturday afternoon, straight time.

Construction forces: Hours of work, 10 hours in summer and 8 hours in winter, with overtime pay in the winter after the 9th hour.

Electrical department.—Overtime to electrical sub-station operators after 8 hours, when their regular shift is 8 hours.

All employees: sub-foremen will be paid 5 cents extra per hour.

In case of any difference arising the employee shall have right to a hearing before the superintendent with assistance of a fellow employee chosen by him. If there is no settlement the employee may appeal to the commissioners.

The commissioners shall make all promotions. If differences arise between commissioners and the Union, the union representatives shall be given a hearing by the commissioners.

MOOSE JAW, SASKATCHEWAN.—MOOSE JAW ELECTRIC RAILWAY COMPANY, LIMITED, AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISION No. 614.

Agreement in effect from August 15, 1923, with 30 days' notice of change.

Wages per hour, operators; first three months, 40 cents; second three months, 45 cents; thereafter, 50 cents. Spare men reporting and not obtaining a run, one hour's pay for each report.

Operators will begin as students without pay until qualified.

Hours per day, nine; operators shall be paid nine and one-quarter hours' time (this includes time for reporting). Overtime rates, time and one-half.

Hours per day on Sundays and holidays, nine.

Operators must be twenty-one years of age and able to read and write English.

No men will be required to do extra work after their day's run if spare men are available. The company will try to provide that men shall not work on their days off.

Time and one-quarter will be paid for extra work. Every seventh day on a run shall be the day off.

Employees shall have free transportation.

Offences of employees shall be investigated. The manager may dismiss an employee after he has been suspended three days. An employee suspended or dismissed may have case investigated by properly qualified officers of the association. The matter may be referred if necessary to a board of arbitration.

The company may promote men but will consider senior men, if qualified and in good standing. Section car barn employees and others may be promoted to become spare operators.

Lost articles must be handed in and if not claimed will belong to the employees.

Barn men will be responsible for signs.

The company will not discriminate against union men. The company will meet and treat with officers and committees of the union over grievances.

SASKATOON, SASKATCHEWAN. — BY-LAW TO REGULATE WORKING CONDITIONS AND WAGES OF EMPLOYEES OF PUMPING PLANT AND ELECTRICAL DEPARTMENTS OF THE CITY OF SASKATOON.

In effect from June 8, 1925, until January 1, 1926, wage scale retroactive to January 1, 1925.

Outside electrical workers:—

Hours per day, 8½; Saturday, 4½. Hours of wiring inspectors, 7 per day; 4 on Saturday. Hours of patrolmen and tungsten patrolmen, special and in accordance with their necessary duties.

Work after regular hours and after 12.30 p.m. Saturday, time and one-half; after 10 p.m., and after 5.30 p.m. on Saturdays, and on holidays, double time.

Any worker in charge of four or more journeymen or twelve or more labourers shall be sub-foreman, provided he has at least three years' experience.

Any worker shall be a journeyman who has at least three years' experience in one or more of the following branches: lineman, cable splicer, wireman, troubleman.

Not more than one apprentice to two journeymen.

The electrical engineer or line foreman may dismiss any worker without notice if work is unsatisfactory. Seniority shall be given preference in filling any vacancy.

Minimum wages: per month—wiring inspector, \$161.35; per hour, sub-line foreman, 91.8 cents; leading linemen, 88.7 cents; lineman, 86.2 cents; wireman (electrician), 78 cents; arc patrolman, 70.2 cents; meter installers, 70.2 cents; arc trimmers, 65.2 cents; tungsten patrolman, 58.9 cents; groundsmen, 55.2 cents. Apprentice linemen: 1st three months, 54.8 cents; increasing every six months to 67.4 cents per hour in last nine months of period.

Power house workers: hours per day, nine; four and one-half on Saturday, except for men on shift. From April to September, nine hours per day starting at 7 a.m. instead of 8 a.m. and ending at 5 p.m. instead of at 6 p.m., and starting on Saturdays at 7.30 a.m. instead of at 8 a.m.

Workers called on duty after the completion of a day's work shall receive time and one-half to 10 p.m.; from 10 p.m. until 8 a.m., or on holidays, double time.

In case of a double shift, for trouble, breakdown or any reason, no overtime until after the first nine hours of the night shift.

Workers on monthly basis shall not work over 8 hours per day except in event of a breakdown.

Workers who work on Sunday shall be allowed one day in seven if possible, or if not, overtime shall be paid for that day.

In filling any vacancy, seniority shall be given preference, provided that, if no one at the power house is qualified, a pumping plant employee shall be given preference.

The electrical engineer may dismiss any worker without notice if work is completed or if he proves unsatisfactory.

The following are wages per hour of workers on hourly basis: skilled mechanics, 70.4 cents; motor mechanic, 70.4 cents; blacksmiths, 65.4 cents; foreman boiler cleaner, 65.1 cents; boiler cleaners and ash men, 55.3 cents; coal handlers, 55.4 cents; spare fireman, 64.6 cents; flue blower, 55.5 cents; mechanic's helpers, 55.3 cents.

Tradesmen employed at the power house shall be paid union rate and work union hours if not permanent employees of the department.

Switchboard operators shall be paid a minimum salary of \$112.50 per month and a maximum of \$148.80, three increases being granted by the electrical engineer.

Pumping station workers—Monthly workers shall not work over eight hours per day except in case of a breakdown. Workers whose regular duties demand Sunday labour shall be allowed one day off in seven, or overtime for that day.

In filling vacancies seniority will be given preference.

Hourly workers: nine hours per day, from 8 a.m. until 12 noon and from 1 p.m. until 6 p.m.; and from April to September, 7 a.m. until 12 noon and 1 p.m. until 5 p.m., and on Saturdays from 7.30 to 12 noon.

The city engineer may dismiss any worker without notice when work is completed or if he proves unsatisfactory.

Overtime to 10 p.m. time and one-half, thereafter until 8 a.m. double time.

In case of double shift, for trouble, breakdown or other reason, no overtime shall be allowed for the first nine hours of the night shift, but overtime shall be allowed thereafter.

General provisions:—

The chief engineers, wiring inspectors, draughtsmen and construction foreman may have twenty-one days' holidays with pay every year after one year's service. No overtime shall be paid to these employees.

Hourly workers may have one week's holidays with pay after one year's service, and two weeks' after two years' service.

Hourly workers after one year shall be entitled to sick leave with pay, such not to exceed two weeks without sanction of the Council.

Monthly employees will be allowed sick leave with pay for a reasonable length of time.

SASKATOON, SASKATCHEWAN. — BY-LAW TO REGULATE WORKING CONDITIONS AND WAGES OF MEMBERS OF THE FIRE DEPARTMENT.

Effective from June 8, 1925, until January 1, 1926, scale of wages retroactive to January 1, 1925.

The two-platoon system shall be carried out. In case of a large fire the entire force shall be subject to call.

In filling vacancy in a permanent position, seniority shall be chief consideration.

No fireman shall be dismissed until cause has been discussed by the fire chief with the grievance committee of the Firemen's Union. The committee may then lay the matter before the city commissioner and if still not satisfied, before the Council.

Any member desiring to resign without giving required notice must take matter up with the fire chief.

Members must be instructed in operation of all motor apparatus.

Firemen after 10 hours' service may have 14 hours' rest except in cases of emergency.

After one year's service, 14 days holidays with pay; after two years, 21 days.

Provision is made for supplying certain clothing.

The president and recording secretary of the Firemen's Union will be granted leave of absence as required for their duties, where operation of the service will permit, twenty-four hours' notice being given.

Wages, per month—fire alarm and police telegraph supervisor, \$175.75; senior captain, \$167.50; captains, \$147.50; motor mechanics, \$147.50; lieutenants, \$142.50; firemen, 1st year, \$117.50; 2nd year, \$127.50; 3rd year and after, \$137.50.

EDMONTON, ALBERTA.—CORPORATION OF THE CITY OF EDMONTON AND THE CANADIAN ELECTRICAL TRADE UNION, EDMONTON BRANCH.

Agreement to be in effect from January 1, 1925, until December 31, 1925, and from year to year or until a new agreement is negotiated. Proposed changes will be discussed during the last 15 days of December of any year.

Hours, eight per day and four on Saturdays. Hours are fixed, except in shift work, where they shall be as required. A shift work assignment shall be for not less than six calendar days.

In event of legislation requiring a 44 hour week the Department will adopt hours of work to suit such requirements.

Overtime on basis of 8 hours per day for daily men and 26 days per month for monthly men. Overtime rates: between 5 and 10 p.m. and Saturday afternoons, time and one-half; Sundays and holidays, double time.

Vacations: monthly employees after one year, two weeks' vacation with pay each year; hourly employees after one year's work, one week's vacation with pay; two weeks each year thereafter.

Permanent employees must give two weeks' notice of resignation and will be given two weeks' notice of dismissal.

If employees are not considered as deserving of increases in salary they shall be notified to that effect and may appeal the matter.

Preference of employment will be given to those of British nationality.

Permanent employees shall be entitled to two weeks' sick leave with pay, which may be extended in exceptional circumstances. This clause to remain in force until a sick insurance clause is operative.

There shall be no discrimination against employees for being or not being members of any organization.

When the number of employees in a position is reduced the last employed shall be first laid off, and if more are required the last off shall be given preference of re-employment.

In case of a vacancy the next senior man who can prove himself efficient shall be promoted. This does not apply to the head or the superintendent where the clause shall not be binding.

Any employee suspended, superseded or discharged, or employees laid off and refused employment on grounds of incompetency may have case investigated by a committee of employees or union members, which shall appeal to the superintendent, so that an investigation may be held, the committee having further right of appeal to the city commissioners and council, and further to a board of conciliation.

Wages and conditions for telephone employees:—

Night service men in each exchange, four nights off each month.

A monthly employee whose duties require Sunday work shall be allowed equal time off, no employee being required to work more than one Sunday in two on this basis. Monthly employees working additional Sunday duties or holidays will be paid double time in addition to monthly pay.

Wages, per month:—switches—Apprentices, from \$80 to \$105; journeymen, from \$130 to \$168. Employees under 18 years of age, on switch work and service work, \$80 per month for three months; thereafter, until 18 years of age, \$70. Employees on switch work, who are over 18 years when entering, shall serve a probation period of six months at \$70 per month. Service men

and rack men, per month—18 years of age, \$76; 19 years of age, \$86; over 20 years, \$101 to \$154. Inspectors, per month, from \$130 to \$154; on P.B.X. work, 1st 6 months, \$154; thereafter, \$163. Shop mechanics, per hour, from 46 cents to 65 cents. Installers and linemen, per hour, apprentices, 43 to 52 cents; journeymen, 61 to 79 cents. Cable splicers, per hour, apprentices 65 to 84 cents; helpers, 55½ cents; journeymen, 93½ cents.

Light, power and street railway electrical employees.

Wages and working conditions:—A foreman must have been engaged at least four years in one or more branches of the trade. An apprentice shall have worked at least six months at some branch of the trade. An apprentice shall serve four years. One apprentice to three journeymen. Cable splicers' helpers and line inspectors must be journeymen linemen. Outside troublemen working over 8 hours out of 24 shall be paid overtime.

Street railway electrical employees:—Not less than a competent lineman and a helper shall work on maintenance work except in emergency shift. Cable and car wiring and testing other than ordinary repairs and emergency work must be done by car wiremen. No apprentice may work overtime unless with a journeyman.

Wages of light, power and street railway electrical employees: line construction and maintenance, journeyman, 82 cents; apprentice, 55 cents to 74½ cents; lineman street railway, 82 cents.

Street light section, wages, per month—journeymen, from \$106 to \$141; journeymen, \$157, power house electricians, 82 cents per hour. Power house operators, substation, \$143.50 per month; relief, \$149.50 per month. Armature winders at car barns, 82 cents per hour; car wiring and trouble men, 80 cents per hour.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING August the Department received information regarding twenty contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by order in council for the protection of the labour to be employed. In sixteen of these contracts the general fair wages clause was inserted, requiring adherence to the current wages rates and hours of the district in which the work was performed, for all classes of labour employed. The four remaining contracts contained schedules of wages rates and hours based on the current standards of the district in these respects. The standard labour conditions sanctioned by the order in council which appears in the twenty contracts already referred to are in the terms following:—

LABOUR CONDITIONS

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable

rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the

Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-

contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Reconstruction of a pile bent and timber decking wharf at Mission, British Columbia. Name of contractor, The Vancouver Pile Driving and Contracting Company, Limited, New Westminster, B.C. Date of contract, August 6, 1925. Amount of contract, \$3,980. A fair wage schedule is inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages not less than	Hours per day
	Per day	
Boom men.....	\$7 50	8
Carpenters.....	7 00	8
Carpenter foreman.....	7 50	8
General foreman.....	8 00	8
Pile driver men.....	7 00	8
Pile driver engineer.....	8 00	8
Pile driver foreman.....	9 00	8
Driver with 1 horse and cart.....	7 00	8
Driver with 2 horses and wagon.....	9 00-10 00	8 hours days 48 hours week

Reconstruction of wharf at St. Antoine de Tilly, Quebec. Name of contractors, Nap. Trudel et Fils, St. Irénée, County of Charlevoix, Quebec. Date of contract, August 27, 1925. Amount of contract, \$15,448.94. A fair wage schedule is inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages not less than	Hours per day
General foreman.....	\$0 50 per h.	10
Mixer runner.....	0 40 "	10
Crusher runner.....	0 40 "	10
Carpenters.....	0 35 "	10
Labourers (ordinary).....	0 25 "	10
Driver (one horse and cart).....	4 00 per d.	10
Driver (two horses and wagon).....	6 00 "	10

Construction of a new roof to the old Post Office Building at St. John, New Brunswick. Name of contractors, B. Mooney and Sons, Limited, St. John, New Brunswick. Date of contract, August 12, 1925. Amount of contract, \$8,994. A fair wage schedule is inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages not less than	Hours per day
	Per hour \$0 30	
Labourers.....		
Teamsters, two horses and wagon.....	0 80	Per day
Cement workers.....	0 30	\$7 00
Cement finishers.....	1 00	
Carpenters, form builders.....	0 50	
Carpenters, finishers.....	0 60	
Bricklayers.....	1 00	
Wire lathers.....	0 60	
Structural steel workers.....	0 85	
Sheet Metal workers.....	0 65	
Felt and gravel roofers.....	0 60	

Basic day is
9 hours—
half day on
Saturday.

Reconstruction of a pile bent and timber decking wharf at Pitt Lake, British Columbia. Name of contractor, Fraser River Pile Driving Company, Limited, New Westminster, B.C. Date of contract, August 6, 1925. Amount of contract, \$2,491.71. A fair wage schedule is inserted in the contract as follows:—

Trade or Class of Labour	Rates of Wages not less than	Hours per day
	Per day	
Pile driver foreman.....	\$9 00	8
Pile driver engineer.....	8 00	8
Pile driver men.....	7 00	8
Boom men.....	7 50	8
Carpenters.....	7 00	8
		All 48 hours per week.

Dredging approach to channel and wharf berth at Malagash, Nova Scotia. Name of contractor, The Halifax Dredging Company, Limited of Halifax, Nova Scotia. Date of contract, August 1, 1925. Amount of contract, Class "A", \$9 per cubic yard, scow measure; Class "B", \$1.20 per cubic yard scow measure; approximate expenditure, \$18,900.

Dredging channel and basin at Belle River, Ontario. Name of contractor, St. Clair Dredge & Construction Company, Limited, Sandwich, Ontario. Date of contract, August 6, 1925. Amount of contract, Class "B", \$0.58 per cubic yard, scow measure; \$0.38 per cubic yard place measure (overcast).

Dredging channel at River St. Francis, Quebec, and channel at Ile aux Raisins, Quebec. Name of contractor, Aimé Laperrière, Pierreville, Quebec. Date of contract, June 17, 1925. Amount of contract, Class "B", \$0.30 place measurement for both places.

Painting, repairing, docking and cleaning dredge, Public Works Department No. 306, "Mastodon." Name of contractor, Burrard Dry Dock Company Limited, North Vancouver, British Columbia. Date of contract, August 3, 1925. Amount of contract, \$6,490. Unit prices for any additional work.

Repairs to wharf at Port Clements, Skeena District, British Columbia. Name of contractor, Malcolm Milloy, Masset, British Columbia. Date of contract, August 7, 1925. Amount of contract, unit prices; approximate expenditure, \$6,067.19.

Supply and installation of interior fittings in the Post Office at Loretteville, Quebec. Name of contractor, The J. T. Schell Company of Alexandria, Ontario. Date of contract, August 20, 1925. Amount of contract, \$1,309.

Reconstruction in concrete of 278.5 feet at the High Level Wharf at Sorel, Quebec. Name of contractor, Jackson Construction Company Limited, Sorel, County of Richelieu, Quebec. Date of contract, August 19, 1925. Amount of contract, unit prices; approximate expenditure, \$10,343.

Construction of a breakwater on the eastern side of entrance to New London Harbour, Prince Edward Island. Name of contractors, E. McLeod, G. McKenzie and D. MacKenzie, French River, Prince Edward Island. Date of contract, August 22, 1925. Amount of contract, unit prices; approximate expenditure, \$29,904.

Construction of a wharf at Parrsboro, Nova Scotia. Name of contractor, Thos. P. Charleson, Ottawa, Ontario. Date of contract, July 30, 1925. Amount of contract, unit prices; approximate expenditure, \$37,986.80.

Reconstruction of 190 feet of the South Pier at Burlington Channel, Ontario. Name of contractor, The Randolph Macdonald Company, Limited, Toronto, Ontario. Date of contract, July 50, 1925. Amount of contract, unit prices; approximate expenditure, \$32,098.86.

Execution of repairs to wharf at St. Laurent, I. O., Quebec. Name of contractors, Napoleon Trudel et Fils of St. Irénée, Quebec. Date of contract, August 4, 1925. Amount of contract, unit prices; approximate expenditure, \$8,628.30.

Construction of an extension to the wharf at Windsor, Nova Scotia. Name of contractor, Halle B. Bigelow, Canning, Nova Scotia. Date of contract, July 28, 1925. Amount of contract, unit prices; approximate expenditure, \$20,429.17.

Repairs to wharf at Baie St. Paul (Rivière de Gouffre), County of Charlevoix-Montmorency, Quebec. Name of contractors, Méthot and Fournier, Montmagny, Quebec. Date of contract, August 11, 1925. Amount of contract, unit prices; approximate expenditure, \$5,746.

Repairs to piers, Kincardine, Ontario. Name of contractors, John Keys and David

Keys, Kincardine, Ontario. Amount of contract, unit prices; approximate expenditure, \$16,943.20.

Enlargement and repairs to wharf at Mill's Point, New Brunswick. Name of contractors, Lawrence Doyle, Douglastown, New Brunswick. Amount of contract, unit prices; approximate expenditure, \$22,178.30.

Construction of a breakwater at Gulliver's Cove, Nova Scotia. Name of contractors, E. J. Gaudet and S. F. Comeau, Comeauville, Nova Scotia. Date of contract, August 5, 1925. Amount of contract, unit prices; approximate expenditure, \$11,873.10.

POST OFFICE DEPARTMENT

The following is a statement of payments made in August, 1925, for supplies ordered by the Post Office Department, and subject to the provisions of the Fair Wage clause:—

Nature of orders	Amount of orders	
	\$	cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	949	59
Making and repairing rubber stamps, daters, etc.	192	83
Making up and supplying Letter Carriers' uniforms, etc.....	14,075	32
Stamping pads, ink, etc.....	23	28
Mail bag fittings.....	1,517	94
Scales.....	165	25

PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1925

Cost of Living, Prices of Staple Articles, and Index Numbers

THE movement in prices during the month was toward somewhat higher levels, advances appearing in both the family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices. The increase in the former was, however, mainly seasonal.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.84 at the beginning of August as compared with \$10.49 for July; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.92 for June, 1920 (the peak); \$16.42 for August, 1920; \$13.41 for August, 1918; and \$7.68 for August, 1914. Potatoes were substantially higher in price with the marketing of the new crop. Advances also occurred in eggs, butter, cheese, pork, bacon, and lard, while beef, bread, flour, rolled oats and tea were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.05 at the beginning of August as compared with \$20.70 for July; \$20.57 for August, 1924; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.92 for July, 1920 (the peak); \$26.60 for August, 1920; \$21.20 for August, 1918; and \$14.41 for August, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, advanced to 159.5 for August, as compared with 158.4 for July; 156.8 for August, 1924; 153.5 for August, 1923; 151.7 for August, 1922;

165.5 for August, 1921; 250.2 for August, 1920; and 202.8 for August, 1918. Forty-nine price quotations were higher, thirty were lower, and one hundred and fifty-seven were unchanged.

In the grouping according to chief component material five of the eight main groups were higher, one lower and two practically unchanged. The groups which advanced were: Vegetables and their Products due to advances in the prices of wheat, flour, potatoes and rice which more than offset the declines in imported fruits, corn, oats, barley and rubber; Animals and their Products due to higher prices for hogs, sheep, bacon, butter, cheese, lard, hides and leather; Non-Ferrous Metals and their Products because of a general upward movement in the prices of these metals; Non-Metallic Minerals and their Products because of higher prices for coal; and Chemicals and Allied Products. The Textiles and Textile Products group declined because of lower prices for cotton and wool. The Iron and its Products group and the Wood and Wood Products group were both practically unchanged.

In the grouping according to purpose both consumers' goods and producers' goods advanced, the former mainly because of higher prices for flour, coffee, hogs, bacon, lard, butter, cheese, potatoes and coal and the latter chiefly because of increases in the prices of materials for the milling, meat packing, metal working, and the leather industries as well as for miscellaneous producers' goods.

In the grouping according to origin domestic farm products and articles of marine origin advanced while articles of mineral origin and of forest origin showed little change. Raw or partly manufactured goods advanced, declines in foreign fruits, coarse grains, rubber,

cotton, wool and jute being more than offset by increases in wheat, flax, hogs, sheep and metals. Fully or chiefly manufactured goods also advanced because of increases in the price of flour, bacon, butter, cheese, leather and metal products.

The index number of wholesale prices in Canada, published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods based upon price levels in 1913 as 100, declined to 148 for July as compared with 147 for June; 149 for May; and 147 for July, 1924. Grouped by stage of manufacture raw materials and producers' goods declined while consumers' goods advanced.

The Canadian Bank of Commerce index of exports rose from 154.68 for July to 156.10 for August, while that for imports fell from 162.09 for July to 159.69 for August. The combined index of both exports and imports showed a slight decline to 157.90 as compared with 158.38 for July. Of the exports cereals, hogs, bacon, butter, cheese and salmon advanced while cattle, flour and bituminous coal declined. Among the imports tin and coke increased in price while raw cotton, rubber, steel and anthracite coal showed the most important declines.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the *LABOUR GAZETTE* for January, 1925. A description of the methods used in the construction of the index number appears in the *LABOUR GAZETTE* for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of August of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations

reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the *LABOUR GAZETTE*.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family

in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices moved to slightly lower levels. Sirloin steak declined in most localities, averaging 29.7c. per pound in August, as compared with 30.2c. in July. Rib roast was down from 22.3c. per pound in July to 22.1c. in August, and shoulder roast from an average of 16c. per pound in July to 15.8c. in August. Veal advanced from 18.1c. per pound to 18.4c., increases occurring in most localities. Mutton was steady. Pork showed a general advance, fresh averaging 28.7c. per pound in August, as compared with 28.2c. in July and salt pork averaging 25.8c. per pound as compared with 25.2c. in July. Bacon was up from 43.1c. per pound to 44c., and ham from 61.3c. per pound to 61.7c. In fresh fish, halibut and whitefish were slightly higher. Salt cod and finnan haddie showed little change. Lard advanced slightly, averaging 24.3c. per pound.

Eggs showed a general advance, averaging 40.8c. per dozen for fresh, as compared with 37.6c. in July and 35c. in June and 37.1c. per dozen for cooking, as compared with 33.7c. in July and 31.6c. in June. Milk advanced in London and declined at Nelson. No other changes were reported. Dairy butter showed a general advance to an average of 37.1c. per pound in August as compared with 35.7c. in July. Creamery butter showed about the same general advance as dairy, averaging 42.7c. per pound. Cheese rose from an average of 30.6c. per pound in July to 31.2c. in August. Increases occurred in most localities.

Bread averaged 7.8c. per pound. Lower prices were reported from Toronto, St. John, N.B., St. Hyacinthe, and Timmins. Soda biscuits showed little change. Flour and rolled oats declined slightly, averaging 5.7c. per pound for the former and 6.1c. per pound for the latter. Canned vegetables showed little change. Onions were down from an average of 9.5c. per pound to 8.9c. in August. Potatoes showed a substantial seasonal advance with the marketing of the new crop, the aver-

age price in August being \$2.10 per 90 pounds as compared with \$1.35 in July. Evaporated apples, prunes, raisins and currants showed little change. Marmalade was slightly higher at 77.8c. per four-pound tin. Sugar averaged slightly lower, granulated at 8.3c. per pound as compared with 8.4c. in July and yellow 7.9c. per pound as compared with 8c. in July.

Anthracite coal was slightly higher in the average at \$16.56 per ton. Higher prices were reported from Halifax, Peterborough, Toronto, St. Catharines, Hamilton and Cobalt. Bituminous coal averaged \$10.13 per ton. Hard wood was slightly lower in the average at \$12.13 per cord as compared with \$12.20 in July.

No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on price changes during the month issued by the Dominion Bureau of Statistics.

Wheat prices averaged slightly higher, No. 1 Manitoba cash wheat, Fort William and Port Arthur basis, being \$1.67½ per bushel as compared with \$1.62 in July. The high price for the month was \$1.73½ reached on the 7th and the low price \$1.50¼ reached on the 29th. The decline toward the end of the month was said to be due to improved weather conditions here and abroad together with the reports of a large Russian surplus, and the refusal of foreign buyers to purchase at prevailing prices. Flax seed rose from \$2.22½ per bushel to \$2.39½. Coarse grains declined, oats averaging 56½c. per bushel as compared with 59½c. in July, barley 82½c. per bushel as compared with 88½c. in July. Corn was \$1.20¼ per bushel as compared with \$1.22 in July. Flour moved in sympathy with wheat, rising from \$9.10 per barrel to \$9.26½. Rolled oats fell 20c. per 90-pound bag to \$3.70. Bananas at Montreal declined from \$3.75 per bunch to \$3.50 and lemons at Toronto from \$5.50-\$6 per case to \$4.50-\$5. Ceylon rubber declined from \$1 per pound to 82½c. Santos coffee was slightly higher, advancing from 28c. per pound to 29c. New potatoes replaced the old supplies at considerably higher prices, being up at Toronto from \$1.13 per bag in July to \$1.30-\$1.50 in August. Rice advanced from \$3.25-\$4.75 per hundred to \$3.25-\$5.25. Western cattle declined from \$6.45 per hundred to \$6.22½, while at Toronto choice steers advanced from \$7.47½ to \$7.62 per hundred. Dressed hogs rose from \$16.50 per hundred to \$17. Sheep advanced to \$7.12½ per hundred as compared with \$6 in July. Beef hides advanced from 12½c.-13c. per pound to 13c.-13½c. Sole leather was up 1c. per pound

*LABOUR GAZETTE, December, 1923 page 1442.

to 43c. Bacon at Toronto advanced from 34½c.-36c. to 36c.-37c. per pound. Butter continued to advance, creamery at Montreal being up from 38c. per pound to 40c., and at Toronto from 41c. per pound to 42c. Cheese at Toronto advanced from 23c. per pound to 25c. Raw cotton at New York declined from an average of 24½c. per pound in July to 23½c. in August due, it was said, to more favourable

weather and to the heavy selling induced by the general expectation of low prices. Non-ferrous metals showed a general upward movement. Copper rose from \$16.50 per hundred to \$16.55; lead from \$8.70 per hundred to \$9.30; tin from 58½c. per pound to 59c.; zinc from \$8.65 per hundred to \$9; aluminum from 24c. per pound to 25½c. Anthracite coal advanced from \$13.21 per ton to \$13.42.

INDEX NUMBERS OF WHOLESALE PRICES (WEIGHTED) CALCULATED BY THE DOMINION BUREAU OF STATISTICS (Average Prices 1913=100)

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Wholesale prices in France, Italy and the United States continued to rise, and the beginning of a recovery was shown by prices in Great Britain. Prices rose also in Finland, Germany, Netherlands, Poland, Sweden and China.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, showed a small fractional decline, being 157.5 for July as compared with 157.6 for June and 162.6 for July, 1924. Foods were somewhat lower while non-foods advanced slightly. In the former group cereals were lower, while meat and fish and miscellaneous foods advanced. In the latter group, iron and steel and cotton declined while other metals, other textiles and miscellaneous non-foods advanced.

The *Statist* index number (in continuation of Sauerbeck's figures, base period 1867-77), after having declined throughout the first six months of the year, showed an advance for July to 134.3, as compared with 131.2 for June, and 138.4 for July, 1924. Both food-stuffs and materials advanced. In the former group both vegetable foods and animal foods advanced, while sugar, coffee and tea declined. In the materials group, minerals, textiles, and sundries advanced.

The *Times* index number, on the base 1913=100, recorded a rise in the general level of wholesale prices for July, as compared with June of 1.8 per cent, bringing the index to 158.4. The index for food rose 3 per cent to 156.7, and that for materials increased 1.1 per cent as compared with June, to 159.4. Meat and fish increased 2.7 per cent, and cereals declined 0.1 per cent, while other food increased 6.2 per cent. Iron and steel declined 0.7 per cent, and other metals and minerals rose 3.6 per cent. Cotton declined 0.8 per cent and other textiles rose 3.1 per cent; other materials rose 0.7 per cent.

Austria

WHOLESALE PRICES.—The index number of the official Statistical Office, reckoned in crowns, first half of 1914=1, was 18,817 in

August, 4.4 per cent below the July level. Foods declined 7.4 per cent and industrial materials rose 1.5 per cent.

China

WHOLESALE PRICES.—The index number of the Ministry of Finance, Bureau of Markets, Shanghai, on the base February, 1913=100, advanced to 162.8 for July, as compared with 157.3 for June and 151.5 for July, 1924. The figure for July marks the highest level reached in the last six years. Cereals, other food products, and industrial materials advanced substantially while there were smaller advances in textiles, metals, fuels, and sundries. The indexes of both export goods and import goods advanced.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100 (gold prices), rose from 133.8 in June to 134.8 in July. Fats, sugar, meat and fish, colonial produce, hides and leather, textiles, metals and minerals advanced, while grain and potatoes, and coal and iron showed little change.

COST OF LIVING.—The official index number advanced to 143.3 for July, as compared with 138.3 for June and 135.5 for May. Foods advanced from 146.1 to 153.8; rent from 79.6 to 81.8; heat and light from 138.5 to 139.2; clothing from 173.4 to 173.7; and sundries from 182.2 to 184.8.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base, 1913=100, advanced substantially in July to 667.83, as compared with 633.77 for June and 619.35 for May. Foods rose 4.8 per cent and industrial materials 5.6 per cent.

Poland

WHOLESALE PRICES.—The index number of the Central Bureau of Statistics, showing the trend of gold prices, pre-war prices=100, was 119.6 in July as compared with 119.3 in June and 118.0 in May. Wheat and vegetable products advanced substantially while animal products were considerably lower.

COST OF LIVING.—The official index number of the cost of living of a family of four at Warsaw, on the base 1914=100, rose to 151.6 in July, as compared with 148.4 in June. Foods, fuel and light and lodging advanced considerably, while clothing and sundries showed little change. The index for foods stood at 173.9 in July and 170.9 in June.

United States

WHOLESALE PRICES.—Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) declined to \$14.0878 at the beginning of September, as compared with \$14.2438 for August and \$12.8095 for September, 1924.

Breadstuffs, live stock, provisions, textiles, metals, oils, and miscellaneous items were lower, while hides and leather, coal and coke, naval stores, building materials, chemicals and drugs advanced.

The index on September 1 was still higher than any month of the present year except August, and was 10 per cent higher than a year ago and 32 per cent higher than the low point of June 1, 1921, but it was still 32 per cent below the peak of February, 1920.

The Bureau of Labour Statistics index number advanced to 159.9 for July, as compared with 157.4 for June and 147.0 for July, 1924. Farm products and miscellaneous goods advanced substantially, while foods, cloths and

clothing, metal and metal products, and chemicals and drugs showed smaller advances. Building materials, housefurnishing goods, and fuel and lighting declined slightly.

COST OF LIVING.—The index number of the Massachusetts Special Commission on the Necessaries of Life, having as base average retail prices in 1913=100, advanced so that the level for July was 163.4, as compared with 162.8 for June. Food and fuel and light advanced while clothing declined slightly. Shelter and sundries were unchanged. In foods slight increases occurred in the prices of beef, fish, eggs, milk, cheese, lard, coffee, sugar, molasses, corn meal, rice, potatoes, prunes, vinegar, dried beans, and oatmeal and slight decreases in pork, lamb, veal, tea, flour, bread, onions, and canned goods. The increase in fuel was due to higher prices for anthracite coal. The lower level reached by the clothing group was caused by declines in prices of shoes, hosiery, gloves, and women's underwear.

Contract Rates and Unemployment

The *Canadian Mining Journal*, in an article on the late settlement in the coal mining industry in Nova Scotia, refers to the recent substitution of day rates for contract rates of wages. When the strike occurred last March a large number of datal men were on piece work. That is, men who formerly were paid by the day had contracted for their class of labour, and by working harder had an opportunity of earning higher wages. This class became known as "local contractors." One of the terms of the contract was that either party could by giving thirty days notice end the contract. Shortly after the strike began the company notified these classes that local contracts would be abolished after a certain date. The article states that the company is determined that there shall be no return to contract rates, and suggests that the contract system injures the industry in other ways than the earning of excessive wages by the local contractors. "Well satisfied with his earnings," it states, "the contract drivers and other coal handlers who are usually young men, refused absolutely to move on up through the different grades of mining until they reached the face. In the past, miner boys found ready employment in the collieries. Their earnings added much to the family income. By the time a boy now gets employment he has reached the age where he wants the most of his earnings for himself. Robbed of this class of miners, the Coal Company, in order to keep up production is forced to bring in labour from other countries. This reacts back and altogether shuts out many of the boys who should

become the native miners and form the professional class growing up around the mines. These must leave and go elsewhere for employment and in time if the boys succeed the family moves into the United States or to some part of upper Canada. No industry can afford to lose this class of labour. It impoverishes the province and enriches other states and communities. It swells the accident rate and burdens the industry. There must be some way found of keeping the professional miner in the province and now is the time to solve this problem."

Minimum Wages of Female Apprentices in Saskatchewan Stores

The Minimum Wage Board of Saskatchewan has made some important changes in the existing orders governing shops and stores, the changes to take effect in August. The apprenticeship period for girls and women was raised from eighteen months to two years. The scale of minimum wages to be paid during the period of apprenticeship was also revised and will henceforth be as follows: \$7.50 a week for the first six months of the period, \$10 a week for the second six months, \$12 a week for the third six months, and \$13 a week for the final six months. After this the apprentice will be considered an experienced worker entitled to receive the minimum wage of \$14 a week.

The former scale for apprentices was \$7.50 for the first six months, \$9 a week for the next six months and \$12 a week for the third and final six months.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Employees must follow arbitration procedure laid down in agreements

THE Judicial Committee of the Privy Council in a decision rendered in July, sustained the decision of the Supreme Court of Alberta in the case of *Caven versus the Canadian Pacific Railway Company*. The latter decision was outlined in the December issue of this GAZETTE, and the original judgment from which appeal was first taken was outlined in the issue for September 1924, the circumstances leading to the litigation being already fully described. The court of first hearing had decided in favour of the plaintiff, a railway conductor who was dismissed for alleged misconduct, after an investigation had been held in accordance with Article 10 of the Conductors' Agreement with the company. The investigation tribunal found that the charges were proved. Under the terms of the agreement the conductor was entitled to appeal from the tribunal to the higher officials of the company, but he did not take this course, choosing instead to bring action for wrongful dismissal. The Privy Council held that under these circumstances the plaintiff had no right of action at common law. It was held further that there is no principle of law which can prevent the parties to a contract from entering into a covenant to the effect that no right of action shall accrue thereunder until a third person, selected as provided in the contract, shall have decided on any question of difference that may arise between them.

(Judicial Committee of the Privy Council—*Caven versus Canadian Pacific Railway Company*.)

Defamatory statements against employee must be substantiated

Two employees in municipal paving work became involved in a quarrel, and one of them, having a higher position, being influenced by a resentment, wrote a defamatory letter to the municipal authorities concerning the other man, who was dismissed in consequence, after having been in the municipal service for over ten years, no previous complaint having been made against him. The dismissed workman brought action for damages, and the Superior Court at Montreal, which heard the case, granted damages to the amount of \$1,249, with costs, on the ground that a superior employee who writes a defamatory letter involving the character of a subordinate must be prepared

to substantiate his charges by positive proof and be in a position to rebut the charge of malicious intent.

(*Quebec—Rivard versus Monette*.)

Railway yardmen must exercise due care while crossing railway track

Two railway yard employees having practically finished their night's work mounted a locomotive in order to go to a round house to change their clothes. They dismounted later and proceeded to cross a track towards the round house. Just as the foremost man stepped on the track he was struck and fatally injured by a train running backwards, which just then came to a stop and started forward without any one on the train being aware of the accident. The widow of the deceased workman brought an action against the railway company for damages, and at the trial of the case by the Superior Court at Montreal the companion of the deceased workman stated that they had not seen the locomotive owing to the haze; that the locomotive had only one light burning inside, that the other lights in the neighbourhood were dim, and that the locomotive gave no signal of approach. On the other hand the engineers of both engines and a fireman swore that the whistle was sounded in accordance with the regular code, while the company officials stated that the yard was exceptionally well lighted. The Court found that the facts were as stated by the engine crew, and dismissed the action, ruling that the uninterrupted ringing of the engine bell, and a head light on a tender when the engine is moving reversely, constitute a reasonable warning of the approach of a train, especially in the case of employees working permanently in the yards of the railway company, and that these employees are strictly obliged under the circumstances to stop, look and listen.

(*Quebec—Dame Kaczuryk versus the Canadian Pacific Railway Company*.)

Limit of wages due in case of unjustifiable dismissal

A train conductor employed by the Intercolonial Railway was dismissed in November, 1920, on a charge of misconduct after an investigation at which he was not present. In November, 1923, he brought an action against the Canadian National Railways for the sum of \$7,475, representing his wages as conductor since September, 1920, alleging that he had been dismissed without cause,

contrary to the agreement then in force between the Canadian National Railway (eastern lines) and their conductors, which provided that employees could not be dismissed without cause, or without the observance of certain specified formalities. The Superior Court at Quebec, in April, 1924, allowed him the sum of \$2,010, declaring that the amount claimed was limited by prescription. Both parties appealed from this judgment in the Court of King's Bench, with the result that, on the appeal of the company, the amount of the award was reduced to \$630, while the counter appeal of the plaintiff was rejected.

The company contended that they were not in existence before October 4, 1922, when they were established by order in council under chapter 13 of the Statutes of 1919-20, and that before that date the plaintiff was in the employ of the Government of Canada, the owner of the line. On this point the Court found that the Canadian National Railways is responsible for the administrative acts of the Government Railway prior to the date of the incorporation of the new organization.

As to the amount due the employee for dismissal without due cause the Court decided that railwaymen, whose employment is for an indeterminate period, and who are paid by the month, are liable to dismissal without cause subject to one month's notice. An employee, however, who is dismissed unjustifiably has the right to the same indemnity as one who is dismissed without cause, namely his wages for the period required for the dismissal to take effect, which period in the present case was three months. The Court further ruled that the salaries of employees engaged for an indeterminate period are subject to claim for a period of five years, as provided in article 2260 of the Civil Code.

One of the judges in appeal dissented from the opinion of the majority, and held that the unjust dismissal of the plaintiff had not put an end to the contractual relations existing between him and the Railways, that he should be re-installed in his position and should receive the full amount he claimed, namely \$7,475.

(Quebec—Levesque versus Canadian National Railways.)

Employment involves a moral obligation

A cook employed by a steamship company sustained an injury to his foot when he fell on leaving the steamship while in port, in order, as he stated, to secure matches to light the cook-stove. He claimed \$3,595 in

damages from the company under the Workmen's Compensation Act. When the case was heard in the Superior Court at Montreal the evidence showed that the plaintiff had been instructed to ask for supplies and to obtain them through a third party, and that he had failed to obey these instructions. The court gave judgment against the plaintiff with costs, pointing out that the act whereby he sustained injury was foreign to his employment, and did not properly arise "but of or in the course of his employment." This phrase, the judgment stated, is to be interpreted in a wide sense, consideration being given not only to the technical aspects of the services rendered by the workman, but also to the duties that are required of him by equity and good faith.

(Quebec—Carpenter versus Canada Steamship Lines Limited.)

Fire Protective Association not subject to Workmen's Compensation Act

A workman employed by a fire protection company was fatally injured in fighting a forest fire. His wife claimed an indemnity of \$3,050 under the Workmen's Compensation Act. The Superior Court at Three Rivers, in a judgment subsequently confirmed by the Court of King's Bench at Quebec, denied the claim on the ground that the act did not apply to a company maintained by public funds, whose object is forest fire protection for the common good of industrial concerns, the government and the settlers.

(Quebec—Dame Chaine versus St-Maurice Forest Protective Association, Limited.)

Employees must make use of Safety Appliances

The June issue of the LABOUR GAZETTE contained a reference to the conviction by a Calgary magistrate of a workman who had failed to comply with the requirements of the Alberta Workmen's Compensation Act by wearing goggles to protect his eyes while working at an emery wheel, in accordance with the Board's Regulation number 49, the workman being ordered to pay the costs of the case. In a similar case in Tennessee the State Supreme Court recently decided that where an employee wilfully fails to use a safety appliance, the use of which has been approved, and which has been furnished by the employer, he cannot, under the workman's compensation law, recover damages for any injury he may sustain. The case arose where a boilermaker of fifteen or twenty years' experience, while cutting rivet heads off a boiler which was being dismantled, failed to wear the goggles furnished by his employer and

was subsequently injured so that removal of his eye was necessary. A county circuit court gave judgment for the claimant but the supreme court, upon employer's appeal, reversed the decision.

Definition of "Principal Support"

A young man aged nineteen years met with an accident which resulted in his death. His father claimed compensation under the Workmen's Compensation Act, stating that his son was his principal support. The claim was allowed by the Superior Court, but on appeal being taken to the Court of King's Bench at Montreal the judgment of the lower court was reversed, the question at issue being the meaning of the expression "principal support." The appeal court followed the principle that was laid down by the Supreme Court of Canada in 1923, in the case of *Laroche versus Wayagamack Pulp and Paper Company*, as follows:—

"In order to determine whether the victim was in fact the principal support of the ascendant, the personal earnings or other income of the latter must be taken into consideration. It must be found that more than fifty per cent of the total subsistence of the ascendant came from the victim. It is not sufficient for the ascendant merely to show that the contribution made by the victim to the ascendant's support exceeded that received from other members of the family."

(Quebec—*Spriggs versus Creighton et al.*)

Injunction at Drumheller, Alberta

In Supreme Court Chambers, at Calgary, Mr. Justice Boyle refused to grant an injunction which had been asked for by certain operators, to restrain members of the Red Deer Valley Miners' Union from picketing, threatening, intimidating, or otherwise interfering with any employee in the mines at Drumheller. An affidavit was filed in court setting forth that a considerable number of men had started to work, and others desired to work under an existing agreement, and that acts of picketing, stonethrowing and assaults upon various employees had taken place and threats made to them and their families. The judge agreed that such acts were illegal, both by statute and under common law, and that if he thought of granting an injunction would do good he would grant it. He believed however that the police could stop the violence complained of by arresting the offenders, and that if proper instructions were given by the attorney general of the province to the commissioner of provincial police it would at once be stopped. He therefore refused to grant the injunction. An injunction was later granted by District Court Judge McNeill.

Standing of Minimum Wage Laws in United States

The Kansas Supreme Court in a decision rendered on July 11, made void the State industrial welfare act in so far as it gives authority to fix wages for adult women. The constitutionality of legislation affecting hours and conditions of labour with respect to safety and sanitation was upheld. The decision does not affect the validity of the law as it applies to minors.

A recent opinion rendered by the Assistant Attorney General of Minnesota declared the Minnesota minimum-wage law to be no longer enforceable in its application to women over 18, because of the decision of the United States Supreme Court with regard to the minimum-wage law of the District of Columbia, and that of the Minnesota Supreme Court in the case of *Stevenson vs. Wesley St. Clair*, brought before it last winter. In the latter case the Supreme Court of Minnesota declared the law valid as it affected minors. A similar decision given in connection with the minimum wage law of Wisconsin was noted in the March issue of this GAZETTE.

Picketing Prohibited in Indiana

The Supreme Court of Indiana recently declared valid an ordinance of the city of Indianapolis which prohibits all picketing, peaceful or otherwise. The ordinance is in five sections, the first forbidding individuals to watch, beset, or picket, with the use of compulsion, threats, coercion, etc.; while the second penalizes watching, etc., without reference to any act of compulsion or threat. The third resembles the first except that it relates to associations and groups, while the fourth resembles the second, but relates also to group action. The fifth provides penalties for the use of "derogatory or opprobrious or indecent epithets or language or gestures or threats of violence" for the purpose of compelling or inducing persons employed to quit, or those seeking employment not to enter thereon.

Various parties had been found guilty of violating the ordinance and appealed on the ground that it was unconstitutional, in particular sections 2 and 4, which omit all reference to the use of threats, violence, and the like.

The court found no difficulty in sustaining sections 1, 3 and 5, but regarded the question as more serious as relating to sections 2 and 4. It was recognized that the majority of courts allowed picketing for the purpose of besetting the employers' premises, "yet many courts whose opinions are entitled to

great weight have taken the position that all picketing, as that term is used in modern practice, is unlawful and should be restrained."

Cases were cited and discussed, the usual or frequent results of picketing considered, and the conclusion reached that in view of such results "it can not be said that such an ordinance is unreasonable. Although the person or persons on picket duty may not by word or gesture make any threat or use any force, we all know that in most of such cases

the very presence of the picket is apt to give rise to contentions and arguments that often result in bloodshed and riots." The right of free speech and peaceable assemblage is guaranteed by the Constitution, but is subject to such regulations as will give to other people an equal enjoyment of their rights in this respect. The statute is of general application, and not special, and it is within the power of the city corporation under its authority to preserve peace and good order.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 25]

OCTOBER, 1925

[NUMBER 10

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

THE employment situation in Canada during the month of August continued to improve, the upward tendency noted in the previous month being still more marked. Reports from the Employment Service of Canada showed a decided increase in the volume of business transacted in August as compared with the records of previous month, and also with those of August of last year. At the beginning of September the percentage of unemployment among members of trade unions from which reports were received, was 4.4 as compared with percentages of 5.2 at the beginning of August and 6.5 at the beginning of September, 1924. Reports from 5,881 firms showed that they were employing 793,624 persons on September 1, as compared with 793,426 persons in the preceding month.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.81 at the beginning of September as compared with \$10.84 for August; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined to 156.5 for September as compared with 159.5 for August; 153.9 for September, 1924; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; and 256.7 for May, 1920 (the peak).

The time loss caused by industrial disputes was less in September than in the previous month or in September, 1924. Fourteen disputes were in progress at some time during the month, involving 1,703 employers, and resulting in a loss of 18,645 working days. Corresponding figures for August were as follows: 17 disputes, involving 13,003 employees, and 102,316 working days; and for September, 1924, 9 disputes, 7,687 employees, and 183,723 working days.

Prosecution proceedings in connection with the alleged combine in the distribution of fruit and vegetables in the Western Provinces were

Combines Investigation Act, 1923

begun in the British Columbia courts on September 30. Through Mr. J. C. McRuer, who

is acting as general prosecutor, eight hundred and sixty-three charges, involved in an indictment of sixteen counts, have been prepared against forty-two fruit firms and eleven individuals in British Columbia, Alberta, Saskatchewan and Manitoba. The indictment is laid under the Combines Investigation Act, 1923, and different sections of the Criminal Code, and includes charges of theft, fraud, falsification of books for purposes of deceit, market juggling and price manipulation, restraint of trade, interference with sound business competition, syndicating and general conniving to cheat the grower and the consumer, with serious injury to the fruit-growing industry in Canada. The final count of the indictment, under Section 26 of the Combines Investigation Act, charges that the fifty-three accused "did unlawfully, knowingly assist, or were parties to, or were privy to, the formation or operation of a combine, as defined in the Combines Investigation Act, 1923, and did thereby commit an indictable offence".

Half holiday on Dominion Election day

An Order in Council (P.C. 1695) was issued on September 25 stating that "the committee of the Privy Council have had before them a report, dated 17th September, 1925, from the Minister of Labour, submitting that he thinks it expedient and in the public interest that the afternoon of Thursday, the 29th day of October, 1925, which has been fixed as polling day for the general election of persons to serve as members of the House of Commons, be proclaimed a public half-holiday. The committee therefore advise that a proclamation do issue, proclaiming the afternoon of Thursday, the 29th day of October, 1925, a general public half-holiday."

It will be recalled (LABOUR GAZETTE, July, 1925, page 656), that when amendments to the Dominion Elections Act were under discussion at the last session of the Dominion Parliament, a proposal to provide for the granting of a general public holiday on the afternoon of election days was accepted by the House of Commons, but the proposed amendment was not incorporated in the bill as it was presented to the Senate. Under the existing provisions of the Act every employer is required on polling days to "allow

every elector in his employ at least two additional hours, other than the noon hour, for voting, and no employer shall make any deduction from the pay of any such elector nor impose upon or exact from him any penalty by reason of his absence during such hours." This provision applies to railway companies and to government railways and their employees, excepting such employees as are actually engaged in the running of trains, and to whom such time cannot be allowed without interfering with the running of trains. The Act makes provision for the holding of advance polls for railway employees, sailors and commercial travellers, whose employment necessitates their occasional absence from their ordinary places of residence.

The Trades and Labour Congress of Canada is on record as being in favour of making election day a public holiday.

Adherence of Canada to "Seamen's Conventions"

An account is given on another page of this issue of the action recently taken by Canada in regard to the Draft Conventions relating to employment at sea that were adopted by the League of Nations International Labour Conference in 1920 and 1921. Acts were passed by Parliament in 1924 to give effect to these Conventions, to take effect by proclamation. The British Parliament at its recent session passed the required legislation, and this was followed in Canada early this month by a proclamation giving effect to the Canadian legislation of 1924 (LABOUR GAZETTE, July, 1924, page 574).

C.N.R. Employees' Board of Adjustment

A joint Board of Adjustment has been established by agreement on the Canadian National Railways for the purpose of dealing with the grievances of employees who do not participate in the Canadian Railway Board of Adjustment No. 1. The employees who will benefit by the new Board will include the clerks, freight-handlers, blacksmiths, boilermakers, machinists and members of certain other crafts.

The Canadian National Railways Employees' Board of Adjustment will be composed of the following members:—

Representing the management: D. Turney, general manager's office, Toronto; H. Morton, general manager's office, Moncton; W. A. Kirkpatrick, superintendent of transportation, Saskatoon, and J. F. Aichison, assistant comptroller, Central Region, Toronto.

Representing the employees: A. R. Mosher, president, and M. M. Maclean, secretary,

Canadian Brotherhood of Railroad Employees, both of Ottawa; C. H. Minchin, Calgary, and N. L. Preston, Winnipeg.

Chairman: J. F. Aichison, Toronto; vice-chairman, A. R. Mosher, Ottawa. (At the end of six months Mr. Aichison and Mr. Mosher will change places.)

The Board will hold its first meeting on November 17, and thenceforth on the third Tuesday of every third month. Its procedure will be on lines similar to those followed by the Canadian Railway Board of Adjustment No. 1.

The latter board was established in 1918, and is composed of twelve members, six of whom are selected by the Railway Association, and one by each of the following labour organizations: Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, Order of Railroad Telegraphers, and Brotherhood of Maintenance of Way Employees. It may be noted that the Memorandum of Agreement under which the Board No. 1 was established provides for the intervention of a disinterested party in case of a deadlock arising between the representatives of the two parties immediately concerned, but the Board has been so successful in its handling of the questions brought before it that it has never been obliged to resort to this provision.

Negotiations are in progress which may result in the establishment of a Board of Adjustment on the Canadian Pacific system similar to the new Canadian National Board.

Revision of salaries of civil servants

An order in council was passed on September 14 (P.C. 1644) recommending to the Civil Service Commission an upward revision of the salaries of certain classes of the employees of the Dominion Government. This decision was reached by the Government after hearing complaints that had been made by the employees against the recent employment classification fixed by the Civil Service Commission. The increases recommended by the Government are based in part on recommendations that were made last year in the case of the postal employees, and in part on the new material and arguments submitted by the different grades of the service in support of their claims.

It will be recalled that at the time of the postal strike in June, 1924, the Government promised that when the Civil Service Commission had completed its work of revising all the salary schedules of the entire Civil Service, opportunity would be given the mem-

bers of the service who had objections to file against these schedules to submit their cases to a sub-committee of the Cabinet. Accordingly, a sub-committee heard the postal workers shortly before the close of the last session of Parliament, and later dealt with the further objections filed by other branches of the Civil Service. After considering all the material before it, the sub-committee sent a recommendation to the Cabinet on which the latter based the order in council already mentioned.

As the law now stands, the Civil Service Commission is the only body authorized to fix civil service salaries. The only other method would be by legislation.

An order in council was issued in the province of Quebec in September authorizing an increase in the salaries of provincial civil servants. The increases, it is stated, will average 16 per cent of the existing salaries of all classes.

Nova Scotia coal mining commission

The Government of Nova Scotia announced early in October the constitution of a commission of inquiry into the coal mining industry in the province. It will be recalled that the tentative settlement reached last August in the dispute between the operators and miners contained the provision that all controversial points not disposed of under the terms of the settlement were to be referred to a special commission of inquiry (LABOUR GAZETTE August, 1925, page 771). In accepting the settlement the District Executive Board of the United Mine Workers of America stated that they were influenced in their decision by the Government's assurance that a thorough inquiry would be made into the coal industry. "Our interpretation of this pledge," they continued, "is that we believe a full, free and fair opportunity should be afforded to establish and prove our contention that the coal industry in Nova Scotia is making ample profits that should ensure higher wages than the 1924 rates."

The chairman of the commission will be Sir Andrew Rae Duncan, designated by the British Government at the request of the Government of Nova Scotia. Sir Andrew Duncan was coal controller for the British Government in 1919-20, and is now the chairman of the advisory committee of the British Mines Department. The other two members of the commission are the Reverend H. R. Macpherson, D.D., D.C.L., president and rector of St. Francis Xavier University, Antigonish, Nova Scotia, and Mr. Hume Cronyn, president of the Mutual Life Assur-

ance Company of Canada, vice-president and general manager of the Huron and Erie Mortgage Corporation and general manager of the Canada Trust Corporation, London, Ontario. The Honourable Premier Rhodes, in announcing the names of the commissioners, stated that while the terms of reference of the commission had not yet been fully drawn up, it was safe to say that they would be very wide and would provide for a thorough inquiry.

Labour and safety

The *Canadian Congress Journal*, in its September issue, says:—"If it were possible to call from

their graves all those killed in industrial accidents in Canada since the Armistice was declared in 1918, and line them up with those injured during the same period, we would have a spectacle that would bring home very forcibly the need for any action which would tend to reduce industrial accidents. If added to this army were the women and children from the homes of these men, some idea of the true burden which these losses are would be obtained.

"Through Provincial Compensation Acts in most of the provinces of this Dominion the actual suffering of those injured and the dependants of those killed has been considerably lessened, but no recompense can fully compensate for the loss through industrial accidents. The National Safety League of Canada, through its provincial leagues in Ontario, Quebec, Manitoba and the Maritime Provinces, has done much to bring to the attention of the employer and of the workers themselves the need for greater precaution against accidents and the Dominion Government can take credit for having made possible, through Dominion grants, the further recognition of this work in the Dominion.

"The cost of compensation for injuries has also helped to bring to the attention of the employers the good business which it is to prevent accidents in addition to the necessity for such work from a humane standpoint. The Compensation Boards in many provinces, where they are under the direction of provincial boards, have assisted employers to realize their duty and opportunities in this respect. All these efforts, however, do not relieve the worker himself from a just share of the responsibility to prevent accidents. In every case he or his dependents are the greatest sufferers, and if for no other reason Labour should support every effort towards the establishment of greater safety devices in industry."

Compensation boards and accident prevention

The Provincial Board of Health of Ontario, in their annual report which is reviewed on another page, calls attention to the lack of co-ordination in the industrial safety work that is carried on by the various administrative units. Accident prevention is the concern of the Workmen's Compensation Board, the Factory Inspection Branch of the Department of Labour, and more recently of the Industrial Hygiene Division of the Provincial Department of Health. While workmen's compensation boards are primarily interested in accidents that have actually occurred, they have authority under the provisions of some of the Provincial acts, to take an indirect share in the work of prevention. Thus the acts of Ontario, Nova Scotia and New Brunswick authorize the Boards of these provinces to give support to safety associations organized by various branches of industry, provided they are fully representative and of recognized standing. But while the Boards may assist such associations by co-operating in the work of inspection and administration, the main burden of expense rests on the associations themselves. The Ontario Board of Health now suggests that workmen's compensation boards shall take a more direct share in accident prevention. They state as a grievance of employers that under the existing arrangements "the employer who effects a real reduction in accident cost in his plant pays for his effort in prevention and at the same time continues to pay a high percentage of his compensation cost." On the other hand it may be noted that the rates of assessment of each industrial group are based upon the accident records of the group, and that the merit rating system confers some indirect benefit on the employer who succeeds in reducing the average rate of accidents in his particular industry.

Safety work on Canadian National Railways

First aid training has made noteworthy progress during the past year among the employees of the Canadian National Railways under the guidance of Mr. W.

G. Robb, vice-president of the system. Since the inception of first aid 27,603 employees have received certificates and 3,841 students have carried the study on to higher grades and been awarded vouchers, medallions and labels, while during 1925 201 new classes have been organized. The results of the recent Dominion and regional competitions, in which the various trophies were won in open competition,

were published in the last issue of this GAZETTE. On the occasion of the distribution of the trophies at Montreal on September 25 Sir Henry W. Thornton, K.C.B., president of the Railways, alluded to the fine spirit which stirred the many men and women of the service who had taken up the study of first aid impelling them to follow up such studies even in their own leisure. "I want them to succeed," he said, "not only in this field and in the realm of sport in which they enter so enthusiastically, but also to see the same spirit of enthusiasm enter into all our undertakings. It is the examples of enthusiasm, courage and service that will make our railway what it should be in the estimation of the people of Canada. It is that spirit which refuses to admit defeat which will bring the system to the position it should occupy."

Proposed amalgamation of railway unions

A proposed amalgamation of the Railway Brotherhoods and shop crafts into one industrial organization was among the subjects considered at the biennial convention of the Canadian Brotherhood of Railroad Employees, reported elsewhere in this issue. This proposal was fully described in the Department's annual publication "Labour Organizations in Canada" for 1923 and 1924, which also noted the attitude of the various unions towards the proposal. The amalgamation, if it should be carried out, would result in the fusion of the sixteen standard railway organizations, as follows: (1) Brotherhood of Locomotive Engineers; (2) Brotherhood of Locomotive Firemen and Enginemen; (3) Order of Railway Conductors; (4) Brotherhood of Railroad Trainmen; (5) Switchmen's Union of North America; (6) Order of Railroad Telegraphers; (7) Brotherhood of Railroad Signalmen; (8) Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; (9) International Brotherhood of Blacksmiths, Drop Forgers and Helpers; (10) International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers; (11) Brotherhood of Railway Carmen; (12) International Brotherhood of Electrical Workers; (13) International Association of Machinists; (14) Sheet Metal Workers' International Association; (15) International Brotherhood of Firemen and Oilers, and (16) the United Brotherhood of Maintenance-of-Way Employees and Railway Shop Labourers.

The proposed amalgamation would follow the lines of the "Minnesota plan" under which a departmentalized organization would be formed, the general union being divided into

several departments, each consisting of a number of kindred trades, and each having direct representation on the general executive of the whole union.

In connection with the proposed amalgamation it is noted in "Labour Organization in Canada" that the American Federation of Labour in November, 1908, established what is known as the Railway Employees' Department with the object of co-ordinating the activities of the railroad workers' organizations which were in affiliation with the federation. At the present time ten organizations are identified with the Departments, viz.: (1) International Association of Machinists, (2) International Brotherhood of Blacksmiths, Drop Forgers and Helpers, (3) International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers, (4) Sheet Metal Workers' International Association, (5) International Brotherhood of Electrical Workers, (6) Brotherhood of Railway Carmen, (7) Switchmen's Union of North America, (8) Brotherhood of Railway and Steamship Clerks, (9) International Brotherhood of Firemen and Oilers, and (10) the United Brotherhood of Maintenance-of-Way Employees and Railway Shop Labourers.

Enforcement of Adolescent School Attendance Act in Ontario

The premier of Ontario informed a deputation from the Toronto Board of Education last month that the provincial grant to Toronto for technical education, which amounted in all to \$300,000, would be withheld unless the Board enforced the section of the Adolescent School Attendance Act providing for the part-time instruction of pupils between 14 and 16 years of age for two half days or one teaching day per week between the hours of 8 a.m. and 5 p.m. (These sections were quoted in the last issue of this GAZETTE on page 860). The amount stated as due to Toronto includes the Provincial grant under the Technical Education Act and the Adolescent School Attendance Act. The delegates declared that there were certain processes of manufacture which would be continuous, and from which the operator could not be spared at any time unless some other person were hired in his place. Premier Ferguson, who, as Minister of Education has charge of the administration of the Act, stated that the manufacturers generally were prepared to co-operate in its enforcement, and that while such a spirit prevailed he was confident that difficulties could be solved. He promised to consider carefully the point raised by the delegation.

The Act provides that "municipalities maintaining such part-time courses of instruction

for adolescents as are approved by the Minister as to organization, control, location, equipment, courses of study, qualifications of teachers, methods of instruction, conditions of admission, employments of pupils and expenditures of money, may receive reimbursement from sums appropriated by this Legislature for this purpose or for technical or for agricultural education, in amounts and under conditions prescribed in the regulations."

Printers' statistical bureau

A new departure in labour union activity on this continent was made on November 1, 1924, when the International Typographical

Union established a statistical bureau. Local union scale committees are now supplied by the bureau with accurate reports prepared to meet local conditions at the period of registering agreements. The reports are based on information which is never more than sixty days old. In the past the statistics used for this purpose were derived from government reports which sometimes contained information as to conditions existing several years previously, and in the words of a report of the bureau they were at the best only barometers of changes in the cost of living. At the recent convention of the union it was stated that complete reports on cost of living and on the printing industry as now prepared play a very important part in the work of scale committees, aiding materially in proving the justice of their demands. At the present rate, in results which this service has produced, \$1,350,000 will have been added to the annual pay roll of 6,275 members by October 31, 1925. Thirty-three complete cost of living reports and eighty-seven special reports on the printing industry have been supplied to local scale committees and not a single decrease has resulted when these reports were used. Nine cases were closed on the old scale and forty-five local scales were increased. Heretofore locals situated in the larger centres have been at quite an advantage because they have been able to use some of the material obtained from federal and private sources, although sometimes obsolete. The locals with a minimum number of members have had very limited assistance. With this new service available for supplying up-to-date facts on cost of living, all locals receive identical service on this special subject. It is possible to supply only the most limited information on the printing industry for the smaller cities; therefore, in those cases the cost of living reports are most valuable.

Reports are received by the bureau from many sources on health, sickness and disease,

wages, employment, federal reserve and other banks, commercial agencies and compensation and other labour laws.

Lawyers' services for poor clients

The Right Hon. Lord Buckmaster, formerly Lord Chancellor of England, addressing the Canadian Bar Association at Winnipeg last month, recommended lawyers voluntarily to devote a proportion of their time to handling the cases of poor clients. He said: "What steps are we to take to remove from our profession the reproach that the poor man cannot get the same even-handed justice as the rich? It does not mean that he does not get justice before the Bench—that I have never heard said—but that in the ability to employ clever counsel and clever lawyers, and to spend the money necessary for the preparation of a case, he was at a disadvantage with the rich litigant, and the result of that disadvantage may well be that the scales of justice may be turned against him. It is a well-deserved reproach that we all must remember, because we know within limits that it is true. That the scales of justice are heavily weighted against the poor litigant is not an accurate statement, but nobody can deny that the rich litigant by being able to get hold of the best men has an advantage. How are we going to meet that? It is something that needs to be met. I believe myself it could be met both here and at home if everybody engaged in the law, either where the branches are divided into counsel and solicitor or where they are one, just simply as lawyers, if every person took a certain number of worthy poor persons' cases in the course of a year and dealt with them exactly as he would with the case of a rich client, we should have gone a long way to remove the reproach. Whether that consideration be worthy of further development or not, at any rate I throw it out to you as one of the things that at least merit a passing thought, and may lead to the development of a valuable reform."

Value of general education

President J. M. Lynch, of the International Typographical Union, writing in the *Typographical Journal*, calls attention to the union's apprenticeship programme, which is outlined elsewhere in this issue in a report of the printers' convention. The union aims at making thoroughly qualified, all-round printers, rather than at teaching the apprentice the particular branch of the work at which he is to make his living. "We are the consistent enemies of specialization," he

says; "it is the sure destruction agent in every trade in which it has been permitted to exercise its devouring and consuming effect." All-round training will, he thinks, make capable and intelligent printers who will be capable of carrying on the high traditions of the union. The course of studies is to be adjusted on the unit system, giving the apprentice some choice in his studies in accordance with his personal tastes and the demands of the trade.

The Committee on Apprentices at the recent convention, made strong recommendations as to the importance of general education, supplementary to training in a particular handicraft. "Regarding supplemental education," they say, "your committee is in favour of the bureau of education adopting any form of study correlative to the printing industry that will increase the mechanical efficiency and the mental ability of apprentices, to the end that they may become capable of holding the higher or executive positions in the printing trade. Our apprentices should be encouraged to not only study while serving their apprenticeship, but to continue after they have become journeymen; to have high aspirations, and to have the ambition to study to achieve their aims. This might rightly be called the higher education of apprentices, to which your committee is very favourably inclined. However, we believe it would not be good policy at this time to make too many recommendations to the bureau of education, through this convention, as to its work while it is in the experimental stage, lest we handicap it in its present splendid progress, but let it work gradually up to those objects and attainments which will make it the equal of any correspondence college in this country."

General minimum wages in South Africa

Further progress in the adoption of the principle of minimum wages is marked by the enactment of the "Wage Board Act" by the South African Parliament during its recent session. The act provides for "the determination of conditions of labour and of wages and other payments for labour," workers in all industries being covered with the exception of those engaged in agriculture and forestry, domestic servants and those whose wages are governed by former acts in force in the Union. A wage board will be established, consisting of three persons, and from time to time a division of this board (also consisting of three persons) may be appointed by the Governor General for investigating conditions in a particular trade or section of a trade. The duty of the board will be to in-

investigate and report to the Minister upon any matter relating to wages or hours or other conditions of labour referred to it by the Minister. Investigations may also be made upon the application of a registered union of work-people or association of employers or of a sufficiently representative number of work-people or employers. In the course of its investigation the board may subpoena witnesses and require the production of books and other records considered relevant to its inquiry.

Upon consideration of a report or recommendation of the board the Minister of Labour, at any time, or from time to time, may determine (a) the minimum wage to be paid by any employer to any employee or class of employees; (b) ascending scales of wages for juvenile employees according to age and experience; (c) the maximum number of juveniles which may be employed in proportion to adult workers; (d) conditions, including wages, applicable to the employment of learners; (e) the class of employers in any area or trade who shall be required to comply with the regulations concerning posting up of rates, determinations, etc.; (f) the trades or sections in any area in which children under 14 may not be employed; and (h) any other matters affecting remuneration or conditions of labour. Where it can be shown in regard to a certain person or class of persons that the terms and conditions of employment are not less favourable than those laid down by the Minister for the respective trade or section, or where a person is incapable by reason of old age or other physical disability from doing the full work required of an able-bodied worker, or where it is justified by special circumstances, the Minister may grant a license exempting such person or class of persons from the application of the wage rate or other matter determined by him.

When the bill was introduced, *Industrial South Africa*, the organ of the manufacturers, expressed the view that while such a measure was not opportune considering the conditions existing in South Africa, yet "in responsible quarters, the introduction of legislation enabling the Government to appoint Wage Boards for particular industries is accepted as a sound principle, and the settlement of a minimum wage for all classes of labour is no longer regarded by thinking employers with suspicion."

It will be recalled that the British Court of Inquiry which recently investigated conditions in the coal mining industry (*LABOUR GAZETTE*, September, 1925, page 862) were of the opinion that "the workers are justified in claiming that any wages agreement which they can be asked to accept should provide for a mini-

mum wage," the rates being a matter for negotiation between the parties. In Canada minimum wages are fixed only in regard to female employees in the industries covered by the orders of the several provincial boards, but in British Columbia the Coal Mines Regulation Act was amended in 1919 to provide for the establishment of a coal miners' minimum wage board. No board however has yet been appointed under this provision.

During August, 1925, 4,189 mothers throughout the province, with 12,796 dependent children in their care, benefited under the provisions of the Ontario Mothers' Allowances Act to the extent of \$149,900. The number of children in each home ranges from two to eleven. In 318 homes there are five children; in 134, six; in 68, seven; in 19, eight, and in 6, nine. In one home there are eleven children.

Mr. Bruce Walker has been appointed director of European emigration for Canada, in succession to Mr. W. E. Little, who went overseas in 1924 to reorganize the machinery of the Department of Immigration and Colonization in Europe, and now becomes commissioner of colonization for the Department. Mr. Walker has had a wide experience in the work of directing settlers in the western provinces. Recently he has been engaged in reorganizing the work of the Dominion Department of Immigration in the United States.

The Agricultural Development Board of Ontario granted \$3,582,150 in loans to farmers in the province during 1924. This amount, slightly less than that granted the previous year, went to more borrowers than in 1923, however. Almost one thousand applications were granted compared with 953 in 1923. To date \$9,352,105 has been loaned to 2,401 borrowers, who have provided security computed at \$21,249,496. The report shows an administrative surplus of the board for 1924 amounting to \$26,705.

The Nova Scotia Government made a grant of \$12,000 during September to continue the work of aiding relief and home nursing in the miners' homes in the province. It will be recalled that early in April, while the recent strike of coal miners was in progress, the previous government placed \$20,000 at the disposal of the Nova Scotia Red Cross Society for relief in cases of ill-health in the colliery districts. (*LABOUR GAZETTE*, May, 1925, page 452.)

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

EMPLOYMENT at the beginning of September showed a very slightly upward movement, in contrast with the unfavourable tendency indicated at the same time last year.

The employment situation at the end of September was reported by the superintendents of the Employment Service of Canada to be as follows:—

In Nova Scotia work in the harvest fields was drawing to a close after a good season. The fishing industry was being interfered with by unfavourable weather conditions. With the approach of colder weather, seasonal operations in the logging industry were reported as commencing, although men seemed slow about accepting such work until a later date. The coal mining industry had once more struck its stride and had about a normal number of employees working, with the usual amount of coal being hoisted. Manufacturing throughout the province seemed to be fairly active; the iron and steel industry was showing a big improvement with much brighter prospects for the immediate future. Although the construction industry was only fair, the usual speeding up of activity in anticipation of winter weather conditions was noticeable.

From the province of New Brunswick it was reported that the farmers had experienced good crops, particularly in potato growing. The fishing industry was active. While the logging industry appeared to be slow in opening up, the prospects for the winter cut were reported as good. Manufacturing industries generally were active, with normal staffs and full time working hours prevalent. Construction activity, which was fair, showed some improvement.

The superintendents from the province of Quebec again reported rather optimistically on the industrial situation. Owing to the advance of colder weather farm workers were not in the same demand. The logging industry was busy, and it seemed that there was a possibility of local shortages of experienced workers in some centres. Manufacturing was reported as active; particularly was this true of the boot and shoe and textile industries in Montreal. From Sherbrooke, however, a surplus of metal workers was reported. The building trades in practically all lines were actively engaged. Transportation by rail was stated to be brisk.

Throughout the province of Ontario there were general demands for farm workers for fall work. In this province there also was

noticeable the speeding up of construction work in the general desire to forestall the severity of winter weather conditions. From the southern section of the province reports indicated that manufacturing was rather busy, and reports of accelerated activity on the part of individual concerns continued to come in. The demands for bush workers were more pronounced, especially in the northern section of the province. Generally speaking, the improvement in conditions reported during the earlier months of the year have been maintained and added to, so that at the end of September unemployment in most centres stood at a comparatively low ebb and conditions generally were reported as the most satisfactory in some time.

Unfavourable weather in Manitoba, combined with the progress that had already been made with threshing, had greatly diminished the demands for farm hands, although many farmers were seeking workers for fall work. From Brandon it was reported that the building trades were steadily employed, though other centres did not seem quite so fortunately situated in this regard. Bush work had again begun to require workers in sufficient numbers to quite substantially affect the employment situation.

Although the weather had interfered with farm work in Saskatchewan, there were still some demands for workers for that industry. Generally speaking, however, the demands for farm workers incidental to the harvest were about finished in this province, and slight surpluses of farm workers were reported from some districts. Most of the farm orders to be anticipated would be for monthly men. Activity in the construction industry was fair; orders were being received and filled without much difficulty for railroad construction workers. In most of the cities there was a fair demand for casual labour but plenty of applicants were available. There were fair demands for women for domestic work with the usual shortages.

From Alberta it was reported that threshing which had been delayed by unfavourable weather was resumed toward the end of the month with a heavy demand for farm labour resulting; it was not possible in all districts to immediately fill these orders owing to some temporary shortages of workers. The building trades were generally active and some shortages of skilled building tradesmen were reported, although these were only of a temporary nature. As in Saskatchewan, the orders for railroad construction workers, which

were coming in, were being readily filled. With a settlement of the industrial trouble, which had been interfering with the operations of the coal mines in some districts, this industry resumed its activity which was expected to further develop as the cold weather approached. As a consequence of this resumption, the coal mining industry re-employed many of its former workers. Conditions as a whole throughout the province appeared to be quite good and were apparently the best obtaining at any time during the last twelve months at least.

From British Columbia the indications were of more and steadier employment with fewer unemployed. The logging industry was fairly active; although there was not much demand for help, experienced workers were none too plentiful. Construction of all kinds was reasonably busy and most centres reported skilled tradesmen as practically all employed. Activity in mining was steady with very little labour turnover. Some offices reported that it was possible to place all men who applied for work, while no office reported any very considerable number of workers remaining unemployed at this time.

EMPLOYERS' REPORTS Employment at the beginning of September showed a very slightly upward tendency, as contrasted with the downward movement indicated in three of the past four years. The level of employment continued to be higher than at the same time of last year. Firms in the manufacturing and logging group registered additions to their payrolls that were largely offset by reductions in construction. An analysis of the returns by provinces shows that employment increased in Quebec, Ontario and British Columbia, while curtailment was noted in the Maritime and Prairie Provinces. In the Maritime Provinces, lumber and food manufacturing, mining and construction were less active, while gains were shown in iron and steel and transportation. In Quebec, manufacturing, logging and trade registered heightened activity, but communication, water transportation, highway and railway construction released employees. In Ontario, increased employment was noted in manufacturing and logging. On the other hand, transportation and construction were slacker. In the Prairie Provinces, the construction departments of the railways reported the large declines in personnel incidental to the harvest season, although the contractions this year were smaller than in either 1924 or 1923. Improvement was indicated in trade and transportation, but manufacturing,

coal mining and highway construction also registered curtailment. In British Columbia, manufacturing, transportation and construction showed the greatest gains; the movement in practically all industries, however, was favourable.

The trend of employment was upward in the eight cities for which separate tabulations are made, but in some cases the gains were insignificant. In Montreal, construction, manufacturing and trade registered considerable improvement, while the only large reductions were in shipping. In Quebec City, very little change was recorded; manufacturing plants were slightly better employed and construction registered curtailment. In Toronto, there was general activity in manufacturing, the textile trades showing most expansion. In Ottawa, the situation was practically unchanged; manufacturing was slightly busier, but men were laid off by highway contractors. In Hamilton, manufacturing, especially of iron and steel products, and construction afforded considerably more employment. In Windsor, automobile plants showed marked improvement and construction was more active. In Winnipeg, moderate gains in manufacturing were largely offset by declines in construction. In Vancouver, construction and transportation absorbed more workers than at the beginning of August.

Employment in manufacturing showed an increase that exceeded the shrinkage recorded in the preceding month. The largest gains were in iron and steel, canning and other edible plant product factories, pulp and paper mills and leather boot and shoe plants. The completion of the season's operations in some sawmills resulted in a decline in employment in the lumber group, and fish canneries and brickyards also showed seasonal losses. Logging camps afforded considerably more employment, indicative of seasonal activity. Mining was slacker, employment in coal mines and quarries declining. Metallic ore mining, however, showed improvement. Communication recorded a moderate decline. Shipping and stevedoring registered losses in personnel, but steam and electric railways and forwarding companies were busier. Further reductions were reported on highway and railway construction, while building contractors continued to enlarge their payrolls. Employment improved in wholesale trade, but there were small declines in retail stores.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of September, 1925.

TRADE
UNION
REPORTS

The term unemployment as used in the following report has reference to the involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation among organized labour at the end of August as reported by 1,507 local trade unions with an aggregate membership of 153,550 persons was more favourable than in either the previous month or the corresponding month of last year, the percentage out of work standing at 4.4 as compared with percentages of 5.2 in July and 6.5 in August of last year. Nova Scotia and New Brunswick were the only provinces to register declines in employment in comparison with July. As compared with August of last year all provinces except New Brunswick reflected better conditions and in this province the change was slight. In the manufacturing division reports were received from 404 locals with 43,840 members and showed 8.0 per cent of the members idle at the end of August this year as compared with 8.5 per cent in July. Within the division, however, fluctuations occurred. Iron and steel and glass workers and the textile trades showed curtailment, which was offset by the increases among cigar makers, wood and garment workers, metal polishers and jewellery workers. A better situation prevailed in the manufacturing division than in August of last year, when 10.1 per cent of the members reported were out of work. Greater activity than in July was registered in the building group, the percentages of idleness being 6.1 as compared with 7.4 at the end of July. All tradesmen in the group with the exception of steam shovel and dredgemen and painters, decorators and paper-hangers were more fully engaged, and the declines among these workers were merely nominal. In comparison with August of last year the situation was considerably more favourable as the percentage out of work August 31, 1924, was 11.8. The 609 locals of transportation workers with a membership of 57,286 persons showed an unemployment percentage of 2.3 as compared with 2.6 in July and with 3.8 in August of last year. Navigation workers were not so active as in July, but employment for steam railway work-

ers increased. Practically no change occurred among street and electric railway employees and teamsters and chauffeurs. Coal miners in Nova Scotia reported more unemployment than in July, but in Alberta and British Columbia the situation improved. Asbestos miners in Quebec and quarry workers in Nova Scotia were fully engaged. Retail shop clerks were not so busy as in July. Fishermen and lumber workers and loggers registered no unemployment. The situation for hotel and restaurant employees and barbers was slightly less favourable, but employment for theatre and stage employees and stationary engineers and firemen was in greater volume.

EMPLOYMENT
OFFICE
REPORTS.

During the month of August, 1925, the offices of the Employment Service of Canada referred 77,186 workers to positions and made a total of 75,887 placements. Of these the placements in regular employment were 67,745, of which 63,896 were of men and 3,849 of women. The placements in casual work numbered 8,142. Employers notified the Service of 81,886 vacancies, of which 72,551 were for men and 9,335 for women. The number of applicants for work was 83,777 of whom 73,785 were men and 9,992 were women. A marked increase is shown in the volume of business transacted when the above figures are compared with those of the preceding month, and also with the records of August a year ago, the reports for July, 1925, showing 31,502 vacancies offered, 39,502 applications made and 28,788 placements affected, while in August, 1924, there were recorded 35,302 vacancies, 44,557 applications for work and 33,498 placements in regular and casual employment. A report in detail of the work of the offices for the month of August, 1925, may be found elsewhere in this issue.

PRODUCTION
IN CERTAIN
INDUSTRIES

The Dominion Bureau of Statistics reports that the production of pig iron in Canada in August was 26,513 long tons, an advance of 27 per cent over the July output of 20,946 tons. Comparing the August output with that of July it is noted that basic pig iron made for the further use of the producers rose sharply from 73 tons to 5,308 tons which may be taken as an indication of an increased demand for steel furnace and rolling mill products; of the grades made for sale, malleable iron advanced from 3,206 tons to 4,609 tons while foundry iron dropped slightly from 17,667 tons to 16,596 tons. For the eight months ending August the cumulative production was 338,351 tons as against 495,658 tons reported

for the same period of last year, a drop of 32 per cent. This year's output consisted of 257,851 tons basic iron, 56,009 tons foundry iron, and 24,491 tons of malleable iron. Blast furnace charges for the month of August included 48,665 long tons of imported ore; 29,738 short tons of coke and 12,695 short tons of limestone. For each long ton of pig iron made the furnace charges were 4,112 pounds of ore, 2,243 pounds of coke and 958 pounds of limestone.

During the month there was a net gain of one active furnace resulting in three furnaces being in blast at the end of August, located as follows: one at Sydney, N.S.; one at Hamilton, Ont.; one at Sault Ste. Marie, Ont. The active furnaces had a daily capacity of 1,275 tons or about 25 per cent of the total capacity of all blast furnaces in Canada.

Ferro-alloys at 2,094 tons marked a slight drop from the 2,209 tons of July and consisted mostly of the grade having a high manganese content. Small quantities of ferro-silicon were also produced.

Production of steel ingots and castings in Canada at 25,007 tons in August showed a slight improvement over the 22,471 tons of July.

Compared with the previous month the increase of August was common to both ingots and castings, ingots advancing from 21,157 tons to 23,585 tons and direct castings from 1,314 tons to 1,422 tons. Of the total output 94.4 per cent was made for the further use of the producing firms and the balance, 5.6 per cent was intended for sale.

For the first eight months of the year the cumulative production was 471,175 tons, a drop of 16 per cent from the 563,706 tons produced in the corresponding period last year. This year's output to date averaged 39,000 tons per month, comprising 458,633 tons ingots and 12,542 tons castings.

Prices for pig iron in August were unchanged from those of June and July, the prevailing quotations being: No. 1 foundry at \$25.35 and No. 2 \$24.85 in Toronto; at Montreal both grades were \$27.25. The Bureau's index number for Iron and Its Products (1913 prices=100), fluctuated slightly from 150.6 in July to 150.4 in August.

In the United States the pig iron output of August made an increase over the previous month for the first time since March last. The daily rate in August was 1,305 tons higher than in July, an increase of 1.5 per cent. During the month there were nine furnaces blown in and seven blown out, resulting in a net gain of 2 active furnaces for the month. It is reported that the steel mills of the Steel Corporation were operated at 75 per cent

and the independent companies at 70 per cent of capacity during the last week of August.

Statistics of coal production for August are not yet available. The output of coal from Canadian mines during July was slightly greater than the production for the preceding month, but was 28 per cent below the average for July in the past five years. The figures were 744,087 tons in July as against 736,851 tons in June, and an average for the month during the five preceding years of 1,033,097 tons. The total number of men employed in the coal mines in Canada during July was 14,702, of whom 10,421 worked underground and 4,281 on surface, as compared with a total of 18,611 in June, of whom 14,195 worked underground and 4,416 on surface. Production per man was 50.6 tons in July as against 39.4 tons per man in June. During July, the production per man-day was 2.3 tons, as compared with 3.3 tons in June. The tonnage lost was largely due to "lack of orders" and "other causes."

A report from the Department's correspondent at Cobalt, Ontario, shows that ten cars, containing approximately 782,502 pounds of silver ore, were shipped from Cobalt during the month of August. This compares with twenty-six cars of silver ore, containing 2,067,310 pounds, shipped in the previous month. The Nipissing Mines shipped 263 bars containing 301,610.89 ounces of silver, and the Mining Corporation of Canada shipped 158 bars containing 157,941.73 ounces, making a total of 421 bars containing 459,552.62 ounces of silver shipped during the month of August; this compares with 346 bars containing 365,471.25 ounces of silver shipped in the previous month.

A report from the British Columbia Forestry Branch shows that 166,629,361 feet of timber board measure, was scaled in the province in August. The total amount of timber scaled in the province during the first eight months is given as 1,409,049,355 feet board measure.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, amounted to \$20,747,640 in August, 1925, as compared with \$18,323,938 in August, 1924. The gross earnings for the first eight months of the year are given as \$146,661,997, as compared with \$153,173,166 in the same period of last year.

The gross earnings of the Canadian Pacific Railway Company as given in a preliminary statement, were \$15,421,148 in August, 1925, as compared with \$14,324,121 in August, 1924. The gross earnings for the first eight months of 1925 were \$105,765,016, as compared with \$113,864,715 in the first eight months of 1924.

BUILDING
PERMITS

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty cities during August showed a seasonal decline of 26.8 per cent compared with the previous month. In comparison, however, with the same month last year the decline amounted only to .1 per cent. The total value for August, 1925 was \$9,258,752; for July, 1925, \$12,641,551; and for August, 1924, \$9,265,945.

The *Maclean Building Review* estimates the total value of the contracts awarded in September as \$29,746,400, as compared with \$31,207,500 in the previous month, and \$22,506,300 in September, 1924. Of the contemplated new construction in Canada in September, 1925, \$8,003,400 was for residential building; \$6,103,700 for business building; \$21,009,500 for industrial building; and \$3,541,300 for engineering construction (including bridges, wharves and dams, sewers, roads and general engineering). Activity was distributed among the provinces as follows:—Quebec, 51.8 per cent; Ontario, 33.4 per cent; Prairie Provinces, 10.9 per cent; British Columbia, 2.6 per cent, and the Maritime Provinces, 1.3 per cent.

EXTERNAL
TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in August, 1925, the merchandise entered for consumption amounted to \$81,974,474 as compared with \$61,960,577 in August, 1924. The domestic merchandise exported amounted to \$111,409,525 in August, 1925, as compared with \$101,678,787 in July, and \$73,821,631 in August, 1924. Foreign merchandise exported amounted to \$1,004,289 in August, 1925, and \$999,995 in August, 1924.

The chief imports in August, 1925, were: iron and its products, \$16,346,483; fibres, textiles and textile products, \$15,977,193 and non-metallic minerals and products, \$15,614,014.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$38,238,341; wood, wood products and paper, \$24,743,902; animals and animal products, \$23,116,232. In the five months ending August, 1925, exports of agriculture and vegetable products, mainly foods, were valued at \$162,452,337; and wood, wood products and paper, \$110,754,343.

Strikes and Lockouts

The time loss due to industrial disputes was less in September than in either August, 1925, or September, 1924. There were in

existence during the month 14 disputes, involving 1,703 employees, and resulting in a time loss of 18,645 working days, as compared with 17 disputes in August, involving 13,003 workpeople and resulting in a time loss of 102,316 working days. In September, 1924, there were recorded 9 disputes, involving 7,687 workpeople and a loss of 183,723 working days. Four new strikes and lockouts commenced during September with a time loss of 2,414 working days. Two of the strikes and lockouts commencing prior to September, and three of the strikes commencing during September, terminated during the month. At the end of the month, therefore, there were nine strikes and lockouts affecting 442 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices were slightly lower in September due mainly to a seasonal decline in the price of potatoes. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.81 at the beginning of September as compared with \$10.84 for August; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. Besides a substantial decline in potatoes there were less important declines in the prices of beef, sugar, and evaporated apples. The most important advances were seasonal increases in the prices of eggs and butter while smaller increases occurred in the prices of pork, bacon, lard, cheese, bread, rice and prunes. Including the cost of fuel and rent with that of foods, the total budget averaged \$21.03 for September as compared with \$21.04 for August; \$20.65 for September, 1924; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38 for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined to 156.5 for September as compared with 159.5 for August; 153.9 for September, 1924; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; and 256.7 for May, 1920 (the peak). In the group-

ing according to the chief component material, three of the eight main groups were lower, three advanced while two were practically unchanged. The Vegetables and their Products group was substantially lower due to lower prices for wheat, coarse grains and flour. The declines in this group were sufficient to offset the increases in all the groups. The Textiles and Textile Products group was lower because of declines in the prices of cot-

ton and wool. The Animals and their Products group and the Non-Ferrous Metals group both advanced, the former because of higher prices for milk, butter, eggs, fish and sheep and the latter because of increases in the prices of lead and zinc. The Iron and its Products group was also slightly higher. The Wood and Wood products group and the Chemicals and Allied Products group were unchanged.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1925

THE number of strikes and lockouts during September was fourteen as compared with seventeen in August. The time loss for the month was less than in September, 1924, being 18,645 working days, as compared with 183,723 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
September, 1925.....	14	1,703	18,645
August, 1925.....	17	13,003	102,316
September, 1924.....	9	7,687	183,723

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Nine disputes, involving 587 workpeople, were carried over from August. Two of the strikes and lockouts commencing prior to September and three of the strikes commencing during September terminated during the month. At the end of September, therefore, there were on record nine strikes and lockouts as follows: cigarmakers at Montreal; fur workers, Montreal; fur workers, Toronto; clothing workers, Montreal; hat and cap makers, Toronto; printing compositors and stereotypers, Edmonton; moulders, Owen Sound; upholsterers, Montreal; and electrical workers, Vancouver.

The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected

thereby, although the unions or organizations concerned have not yet called them off. Information is available as to five such disputes, namely, moulders at Galt, commencing August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Hamilton, January 30, 1925; moulders at Sarnia, March 3, 1925, and street railway employees at St. John, N.B., June 29, 1921.

Of the disputes which began during September, two were for increased wages, one was against the employment of non-union labour at wages below the union rate, and the fourth was a dispute regarding jurisdiction between two unions. Of the strikes and lockouts which terminated during September, one was in favour of employers, two in favour of employees, one ended in a mutual agreement between two unions, and the fifth was partially successful.

In the September issue of the LABOUR GAZETTE and in the August issue reference was made to a dispute in the shipbuilding industry at Lauzon, Que., in regard to the rate of pay for riveters, causing a suspension of work for 252 employees from July 30 to August 10. The above reports stated that the dispute was a strike, the employees ceasing work on July 30. The actual facts as reported by both parties to the dispute and by the correspondent of the LABOUR GAZETTE appear to be that, as a dispute which arose some days prior to July 30 as to the rate of pay for riveters, was holding up the operations of the whole plant, the employer closed down the works till this should have been settled, the employees concerned not having accepted his offer by the time stipulated.

Reference was made in the July issue of the LABOUR GAZETTE to disputes in Drumheller and the Red Deer Valley in Alberta, owing to changes in the wages of coal miners. Some mines were opened at the new rates, others were not, partly for lack of orders, some being picketed by unemployed miners from other mines. Some of the employees of such

mines were deterred from work by the pickets or were alleged to be on strike, the miners being divided between rival unions. The provincial police were sent in by the authorities owing to disorders in connection with the picketing; numbers of pickets were arrested for assault, intimidation, etc., and toward the end of August an injunction was issued by a District Court judge forbidding picketing, naming thirty-six of the leaders (LABOUR GAZETTE, September, page 947). The police were also reinforced. During September more of the mines opened as orders for coal were received, and miners appeared for work in increasing numbers. By September 23, the return to work was general. The mines involved normally employ about 2,000 men, and the dispute extended from June 20 to September 23.

A dispute occurred at Ottawa on September 24, when six stage employees quit work owing to the engagement of a non-union orchestra for a performance. The work of the strikers was carried on by others.

The following notes give information in regard to certain disputes additional to that shown in the accompanying tabular statement.

SALMON FISHERMEN, NEW WESTMINSTER, B.C.—A dispute as to prices to be paid by canneries for fish led to a cessation of fishing on September 23, involving about 1,000 men. The canners agreed to increase the price of pink salmon from $3\frac{1}{2}$ cents to 7 cents per fish, instead of 10 cents as demanded by the fishermen. On chum salmon no agreement was reached, but salteries agreed to pay 16 cents per fish as compared with 12 cents offered by the canners, and the fishermen decided to deliver the chum salmon to the salteries and to resume operations after Saturday, September 25.

STONEMASONS AND STONECUTTERS, KINGSTON, ONT.—On September 2 stonemasons stopped work on the ground that stonecutters were being given work which should be done by the masons. After one day they returned to work, but on September 8 the stonecutters numbering six stopped work. The two unions then arranged as to the division of work between the respective crafts and work was resumed on September 9.

PLUMBERS, ETC., ST. BONIFACE, MAN.—The union plumbers and steamfitters employed in the construction of a building quit work on September 4, demanding that the non-union plumbers employed by one of the other employers on the job should be paid union wages. They were joined in the strike the next day by the bricklayers and carpenters, with a demand that only union members should be employed on the job. It was finally

arranged that all crafts should have union wages and working conditions but that employment would be open to non-union workmen and work was resumed on September 9.

ELECTRICAL WORKERS, VANCOUVER, B.C.—A cessation of work on September 9 by 11 men occurred at Vancouver, owing to a demand for an increase in wages from \$7-8 per day to \$9. At the end of the month it was reported that the strikers had been replaced to a considerable extent, but the dispute had not been settled.

CIGARMAKERS, MONTREAL, P.Q.—The strike of cigarmakers on March 24, against a reduction in wages, remained unterminated at the end of September.

FUR WORKERS, MONTREAL, P.Q.—The dispute involving fur workers at Montreal, owing to failure to agree on a new agreement (the union demanding better wages and working conditions, with preference in employment for union members while employers proposed to make individual agreements with employees, those who refused being discharged in some cases) remained unterminated, although about half the workers involved had secured work elsewhere.

FUR WORKERS, TORONTO, ONT.—The strike beginning on February 20, for enforcement of union working conditions and a signed agreement, was unsettled at the end of September, but the strikers were reported to have been replaced.

CLOTHING WORKERS, MONTREAL, P.Q.—The strike of clothing workers, August 17, against an alleged violation of the provisions in an agreement and the adoption of "open shop" operations was unsettled, but the employer had replaced the strikers to a considerable extent. Some of the pickets were arrested during September, being charged with intimidation, but were released on bail.

HAT AND CAP MAKERS, TORONTO, ONT.—The dispute involving upwards of 200 workers employed by 12 firms commencing June 15, in a demand for union recognition, was unterminated at the end of September, as a settlement with two of the firms had not been reached. These reported that the strikers had been replaced.

PRINTERS, EDMONTON, ALTA.—The dispute involving printing compositors and stereotypers, which commenced June 19, owing to the proposal of the employer to reduce the wage scale specified in the agreement in force, remained unsettled at the end of September, the publisher having closed down the business in the meantime. Out of the 20 men involved, 13 had not secured work elsewhere.

MOULDERS, OWEN SOUND, ONT.—The strike of moulders at Owen Sound against a reduction in wages on January 17 remained untermiated, 10 of the 21 involved at the commencement not having secured work elsewhere.

UPHOLSTERERS, MONTREAL, P.Q.—A dispute involving upholsterers on June 19, regarding alleged unsanitary working conditions and the employment of a non-union workman, remained untermiated, the employer having, however, replaced the workers.

CERTAIN BUILDING TRADES, KINGSTON, ONT.—The strike of painters, plumbers, carpenters

and electricians, on August 24, against the dismissal of union painters and employment of non-union painters, was terminated September 21, the demands of the strikers being conceded.

CARPENTERS AND LABOURERS, QUEBEC, P.Q.—The strike of carpenters and labourers for increased wages and shorter hours, commencing August 24, remained unsettled. The carpenters demanded 57 cents per hour and an eight-hour day, instead of 40-50 cents per hour and a twelve-hour day. By the end of September it was reported the strikers had been replaced.

STRIKES AND LOCKOUTS DURING SEPTEMBER, 1925.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to September, 1925			
MANUFACTURING—			
<i>Tobacco and liquor:</i>			
Cigarmakers, Montreal, Que...	15	375	Commenced March 24, against a reduction in wages. Untermiated.
<i>Fur and leather products, other than boots and shoes:</i>			
Fur workers, Montreal, Que...	200	5,000	Commenced April 1, failure to renew agreements and proposed substitution of individual agreements. Untermiated.
Fur workers, Toronto, Ont....	1	25	Commenced February 20, for recognition of the union. Untermiated.
<i>Clothing, including knitted goods:</i>			
Clothing workers, Montreal, Que.	181	4,525	Commenced August 17, against alleged violation of agreement. Although the workers have been replaced to a great extent, according to latest information the strike is still in existence.
Hat and cap makers, Toronto, Ont.	10	2,500	Commenced June 16, for recognition of the union. Untermiated.
<i>Printing and publishing:</i>			
Printing compositors and stereotyper, Edmonton, Alta.	13	325	Commenced June 19, against a reduction in wages. Untermiated.
<i>Iron, steel and products:</i>			
Moulders, Owen Sound, Ont...	10	2,500	Commenced January 19, against a reduction in wages. Untermiated.
<i>Miscellaneous:</i>			
Upholsterers, Montreal.....	1	25	Commenced June 27, for improved working conditions. Untermiated.
CONSTRUCTION—			
<i>Building and structures:</i>			
Carpenters, painters and plumbers, Kingston, Ont.	16	256	Commenced August 24, against the dismissal of union workmen and the employment of non-unionists. Strikers demands conceded and work resumed on September 21.
Carpenters and labourers, Quebec, Que.	140	700	Commenced August 24, for increased wages and shorter hours. Strikers replaced early in September.
(b) Strikes and lockouts commencing during September, 1925			
FISHING AND TRAPPING—			
Salmon fishermen, New Westminster, B.C.	1,000	2,000	Commenced September 23; for increases in the prices paid for salmon. Substantially successful and work resumed on September 26.
CONSTRUCTION—			
<i>Building and structures:</i>			
Stonemasons and stonecutters, Kingston, Ont.	15	15	Commenced September 2; jurisdiction between two unions. Settlement reached September 9, with an understanding between the unions involved.
Bricklayers, carpenters, steam-fitters, and plumbers, St. Boniface, Man.	90	190	Commenced September 4, against paying certain plumbers less than the union rate. Work resumed on September 9 on the open shop basis and all crafts to be paid union rates.
Electrical workers, Vancouver, B.C.	11	209	Commenced September 9, for increased wages. Untermiated.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND IN AUGUST

The British *Ministry of Labour Gazette* for September states that the number of trade disputes involving a stoppage of work reported to the Department as beginning in August in Great Britain and Northern Ireland, was 39, as compared with 45 in the previous month and 53 in August, 1924. In addition 36 disputes which began before August were still in progress at the beginning of the month. The number of new and old disputes in August was thus 75.

Information as to the total number of seamen involved in a dispute which began about August 12 at various ports in Great Britain is not at present available. Excluding this dispute, however, the number of workpeople who were on strike or locked out, or were thrown out of work at establishments where disputes occurred in consequence of the disputes, in the disputes in progress in August was about 218,000, and the aggregate number of working days lost in disputes during the month was

about 2,813,000. The greatest loss in working days was incurred in the textile group in which 165,000 workpeople were involved in a dispute which lasted 1,983,000 working days.

Of the 39 disputes beginning in August, 9 arose out of demands for advances in wages, 16 on other wages questions, 6 on questions respecting the employment of particular classes or persons, 4 on questions of Trade Union principle, and 4 on other questions. Settlements were effected in the case of 22 new disputes, directly involving 4,000 workpeople, and 15 old disputes, directly involving 25,000 workpeople. Of these new and old disputes, 13, directly involving 5,000 workpeople, were settled in favour of the workpeople; 12, directly involving 22,000 workpeople, in favour of the employers and 12, directly involving 2,000 workpeople, were compromised. In the case of 6 disputes, directly involving over 165,000 workpeople work was resumed pending negotiations.

BOARD OF RAILWAY COMMISSIONERS FOR CANADA

New Orders Governing Locomotives and Tenders and their Boilers

GENERAL Order No. 423 of the Board of Railway Commissioners for Canada, dated August 31, 1925, amends General Order No. 78, dated July 14, 1911, and General Order No. 394, dated February 8, 1924, prescribing the rules and instructions for the inspection and testing of locomotive boilers and their appurtenances. The amending order, which was made on the application of the Railway Association of Canada, supported by the recommendation of the Board's chief operating officer, and with the consent of the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Locomotive Engineers, provides:

1. That the said General Order No. 78, dated July 14, 1911, be, and it is hereby, amended by striking out clause 12 thereof and substituting the following, namely:—

12. Time of Testing.—Every boiler, before being put into service and at least after every twelve calendar months' service, provided such service is performed within two consecutive years, shall be subjected to hydrostatic pressure 25 per cent above the working steam pressure.

2. That the said General Order No. 394, dated February 8, 1924, be amended by striking out clause 11 thereof and substituting therefor, namely:—

11. Lagging to be removed.—The jacket and lagging shall be removed after sixty calendar months' service, provided such service is performed within six consecutive years, and a thorough in-

spection made of the entire exterior of the boiler while under hydrostatic pressure. The jacket and lagging shall also be removed whenever, on account of indications of leaks, the Board's inspector or the railway company's inspector considers it desirable or necessary.

General Order No. 424, also made on the application of the Railway Association, with the support of the chief operating officer and with the consent of the same two railway brotherhoods, amends General Order No. 289, dated March 24, 1920, prescribing the rules to be adopted by the railway companies subject to the jurisdiction of the Board, with regard to the inspection of locomotives and tenders. It provides:—

That the rules relative to the inspection of locomotives and tenders, as approved by the said General Order No. 289, dated March 24, 1920, be, and they are hereby, amended by striking out paragraph 3 thereof and substituting therefor the following, namely:—

Testing Main Reservoirs.—Every main reservoir, before being put into service, and at least once after twelve calendar months' service, provided such service is performed within two consecutive years, shall be subjected to hydrostatic pressure not less than 25 per cent above the maximum air pressure. The entire surface of the reservoir shall be hammer-tested each time the locomotive is shopped for general repairs; but not less frequently than once after eighteen calendar months' service, provided such service is performed within two consecutive years.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Proceedings

FOUR new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This Board was established under an Order in Council dated July 11, 1918, while the war was still in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods. A summary of the recent decisions of the Board is given in the following paragraphs. Summaries of earlier decisions appeared in the issue for September, 1925, and in previous issues.

Case No. 259.—Canadian National Railways (western region) and Canadian Brotherhood of Railroad Trainmen.

A dispute arose between the Company and its trainmen in regard to payment for handling government mail by train baggagemen. Article 11 of the Grand Trunk Pacific Schedule provides:—

"Trainmen who receive, help to load and unload, handle for the purpose of checking, transfer or delivery, between or at terminals, any sacks of His Majesty's Mail, shall receive ten dollars per month therefor in addition to other remuneration provided for in this schedule. When a baggageman works only part of a month he will receive his due proportion of this amount. This article to apply to both freight and passenger trains. On the Mountain Park Branch no allowance will be paid for handling mail."

The Railways interpreted this provision as meaning that the allowances for handling mail should be apportioned according to the number of trips called for by the assignment, and that, for example, if there were sixteen trips in the month, mail being handled only on four trips, the amount of allowance would be four-sixteenths of \$10. The employees contended that if a man worked regularly without a lay-off he was entitled under the schedule to the full amount of \$10. The Board sustained the claim of the employees.

Case No. 260.—Canadian National Railways (western region) and the Brotherhood of Railroad Trainmen.

Rule 8, article 5 of the trainmen's schedule provides that train baggagemen and mixed- and way-freight brakemen handling express in addition to baggage shall be paid \$17.50 a month except on certain milk trains, in addition to other compensation.

The employees claimed that under this provision each man handling express, providing that he does not lay off, should receive \$17.50

irrespective of the number of times during the month that he is required to handle express. The Railways, on the other hand, contended that Rule 8 did not mean that \$17.50 should be paid to a man handling express for only a part of the mileage made, and that the amount paid should be in proportion to the mileage on which express was handled.

The Board sustained the contention of the employees.

Case No. 261.—Canadian National Railways (western region) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

The conductor and crew of a way-freight train were required to go into a point three miles off the main line for commercial loads, and claimed they were entitled to a minimum day for this extra service. Rule 40, Article 5 of the Conductors' Schedule, and Rule 48, Article 5 of the Trainmen's Schedule, reads as follows:—

"Conductors (or trainmen) assigned to regulate trains will not be required to do other work than that to which they are regularly assigned, except in cases of wrecks, when no other conductors are available, or when called to relieve on a superior train."

The Company refused payment as claimed, contending that the employees' claim was very technical and should not fairly be paid. A practice had previously been in effect for the service in question whereby the Railways made a special allowance for the side trip in addition to the day's pay. The Board sustained the employees' contention to the extent of payment for time occupied or miles run in addition to pay for the regular trip.

Case No. 262.—Canadian National Railways (western region) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

When a new yard was placed in operation by the Company all the adjoining yards and territory were formed into one division. The employees claimed that under the terms of the conductors' and trainmen's schedule their mileage should commence and end at the outer switch of the new yard, and that the time consumed between the outer switches in yarding their trains should be paid for under the terminal time rule. Rule 9, article 5 of the Conductors' Schedule, provides:—

"Conductors switching or delayed at terminals or turn-around points will be paid for actual time so occupied at through freight rates. This time will be in addition to mileage or hours made on the trip."

Rule 14, Article 5 of the Trainmen's schedule makes similar provision. The Railway contended that the yard in question was like any other terminal yard, and that there was no valid reason why crews should be

paid terminal detention until after they had yarded their trains, unless the yard should be blocked and the train held outside of the entering switch.

The Board denied the employees' claim.

PROPOSED RATIFICATION BY CANADA OF CERTAIN CONVENTIONS OF THE INTERNATIONAL LABOUR CONFERENCE AFFECTING SEAMEN

A PROCLAMATION was issued by the Governor in Council on October 10 giving effect from January 1 next to four Draft Conventions of the League of Nations International Labour Conference which affect seamen employed on sea-going ships registered in Canada. The Order in Council which authorized the proclamation also granted authority for the adhesion of Canada to these Draft Conventions and directed that the necessary steps should be taken for their ratification.

These are the first Draft Conventions of the International Labour Conference which have been formally accepted in Canada. Most of the other proposals emanating from the International Labour Conference have involved subjects which were adjudged by the law officers of the Crown to be within provincial jurisdiction.

An Act of Parliament was adopted at the session of 1924, on motion of the Honourable James Murdock, Minister of Labour, containing certain amendments to the Canada Shipping Act to give effect to four Draft Conventions which had previously been adopted by the International Labour Conference. Similar legislation was under consideration by the British Parliament at the same time, and on account of the intimate relations existing between Canadian and British shipping, it was deemed advisable to await the passage of the British statute before the Canadian law was put into effect. Section 6 of the amendment to the Canada Shipping Act accordingly provided that the legislation should come into force on a day to be fixed by proclamation of the Governor in Council. The amendments to the British Merchant Shipping Act dealing with this subject were not passed in 1924, but were adopted during the past summer. The Minister of Labour recommended to the Governor in Council that the Canadian Act should accordingly be brought into force, and on account of the necessity for the issue of instructions to shipping masters and other public authorities concerned, it was deemed advisable to make the

legislation effective from the beginning of 1926.

The four Conventions of the International Labour Conference in question are all designed to improve the employment conditions of seamen and their provisions are briefly as follows:—

1. *Unemployment Indemnity in Case of Loss or Foundering of the Ship.*—It is provided in this Convention that in the case of the loss or foundering of vessels engaged in maritime navigation, the seamen who were employed thereon shall continue to receive payment from their employers of their regular rate of wages during any period of unemployment which may result from the shipwreck, not exceeding two months.

2. *Minimum Age for the Admission of Children to Employment at Sea.*—This Convention prohibits the employment of boys under the age of 14 years on vessels engaged in maritime navigation.

3. *Minimum Age for the Admission of Young Persons to Employment as Trimmers or Stokers.*—This Convention prohibits the employment of young persons under the age of 18 as trimmers or stokers on vessels engaged in maritime navigation.

4. *Compulsory Medical Examination of Children and Young Persons Employed at Sea.*—This Convention requires the production of a medical certificate of fitness in the case of all young persons under 18 years of age before engagement as trimmers or stokers on vessels engaged in maritime navigation. The continued employment of such persons at sea is also subject to repetition of the examination at intervals of not more than one year. The Convention does not apply to vessels on which only members of one family are employed. In urgent cases the engagement of young persons under 18 years of age may be permitted on condition that the medical examination shall be undergone at the first port of call.

Text of Canadian Legislation

The text of the Act of Parliament of 1924 amending the Canadian Shipping Act to give effect to the four Draft Conventions of the International Labour Conference affecting Seamen is as follows:—

14-15 George V, Chapter 12, an Act to amend the Canada Shipping Act, to give effect to certain Draft Conventions adopted by the International Labour Conference of the League of Nations. (Assented to 19th July, 1924.)

Whereas at Genoa on the ninth day of July, nineteen hundred and twenty, a General Conference of the International Labour Organization of the League of Nations adopted two Draft Conventions containing *inter alia* the provisions set out in Parts I and II, respectively, of Schedule "B" hereinafter referred to; and whereas at Geneva on the eleventh day of November, nineteen hundred and twenty-one a General Conference of the International Labour Organization of the League of Nations adopted two other Draft Conventions containing *inter alia* the provisions set out in Parts III and IV, respectively, of said Schedule "B"; and whereas it is expedient to give effect to the said Draft Conventions: Therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. Section two of the *Canada Shipping Act*, chapter one hundred and thirteen of the Revised Statutes of Canada, 1906, is amended by striking out paragraph (f) thereof and substituting therefor the following:—

"(f) 'form' means a form in Schedule "A" to this Act."

2. Section one hundred and twenty-six of the said Act is amended:—

(a) By inserting after paragraph (c) thereof the following paragraph,—

"(c) (i) 'child' means a person who is under the age of fourteen years."

(b) By inserting after paragraph (e) thereof the following paragraph,—

"(e) (i) 'ship' where it appears in any section relating to the employment of children or young persons means any ship or boat registered in Canada which goes to sea or is about to go to sea, and does not include any ship employed exclusively within the limits of the inland waters of Canada as defined in paragraphs (g) and (h) of section seventy-two of this Act."

(c) By inserting after paragraph (f) thereof the following paragraph,—

"(f) (i) 'young person' means a person who has ceased to be a child and who is under the age of eighteen years."

3. The said Act is amended by inserting the following section after section one hundred and sixty-four thereof:—

"164A. (1) No child shall be employed in any ship except to the extent to which and in the circumstances in which such employment is permitted under the Convention set out in Part I of Schedule "B" to this Act; provided that this section

(a) shall not apply to a ship in which only members of one family are employed, and

(b) shall not prevent the employment in any ship of a child lawfully so employed at the time of the coming into force of this subsection.

(2) No young person shall be employed or work as trimmer or stoker in any ship, except

(a) in a school-ship or training-ship where the work is of a kind approved by the Minister of Marine and Fisheries and is carried on subject to such supervision as the Minister may approve;

(b) in a ship which is mainly propelled otherwise than by means of steam; and

(c) where the employment is subject to and in accordance with the provisions contained in paragraph (c) of Article 3 of the Convention set out in Part III of Schedule "B" to this Act.

Provided that where in any port a trimmer or stoker is required for any ship and no person over the age of eighteen years is available to fill the place, a young person over the age of sixteen years may be employed as trimmer or stoker, but in any such case two young persons over the age of sixteen years shall be employed to do the work which would otherwise have been performed by one person over the age of eighteen years.

(3) There shall be included in every agreement with the crew a short summary of the provisions of subsection two of this section.

(4) No young person shall be employed in any capacity in any ship unless there has been delivered to the master of the ship a certificate granted by a duly qualified medical practitioner certifying that the young person is fit to be employed in that capacity; provided that

- (a) the foregoing provisions of this subsection shall not apply to the employment of a young person in a ship in which only members of one family are employed; and
- (b) a shipping master or consular officer may on the ground of urgency authorize a young person to be employed on board a ship notwithstanding that no such certificate as aforesaid has been delivered to the master of the ship, but the young person in whose case any such authorization is given shall not be employed beyond the first port at which the ship calls after the young person has embarked thereon, except subject to and in accordance with the foregoing provisions of this subsection. A certificate under this subsection shall remain in force for a period of twelve months from the date on which it is granted, and no longer: Provided that, if the said period of twelve months expires at some time during the course of the voyage of the ship in which the young person is employed the certificate shall remain in force until the end of the voyage.
- (5) There shall be included in every agreement with the crew of a sea-going ship registered in Canada, entered into under the *Canada Shipping Act*, a list of the young persons under the age of eighteen years who are members of the crew, together with particulars of the dates of their birth, and, in the case of a ship in which there is no such agreement the master of the ship, shall, if young persons under the age of eighteen years are employed thereon, keep a register of those persons with particulars of the dates of their birth and of the dates on which they become or ceased to be members of the crew, and the register so kept shall at all times be open to inspection."

4. Section one hundred and eighty-three of the said Act is repealed and the following is substituted therefor:—

"183. (1) Whenever the services of any seaman belonging to any ship registered in any of the provinces terminate before the period contemplated in the agreement, by reason of his being left on shore at any place abroad under a certificate of his unfitness or inability to proceed on the voyage granted as in this Part mentioned, such seaman shall be entitled to wages for the time of service prior to such termination as aforesaid but not for any further period.

(2) Where by reason of the wreck or loss of any such ship on which a seaman is employed his service terminates before the date contemplated in the agreement he shall be entitled in respect of each day on which he is in fact unemployed during a period of two months from the date of the termination of the service to receive wages at the rate to which he was entitled at that date.

(3) A seaman shall not be entitled to receive wages under this section if the owner shows that the unemployment was not due to the wreck or loss of the ship and shall not be entitled to receive wages under this section in respect of any day if the owner shows that the seaman was able to obtain suitable employment on that day.

(4) In subsections two and three of this section the expression 'seaman' includes every person employed or engaged in any capacity on board any ship."

5. The said Act is amended by inserting the following sections immediately after section two hundred and eighty-five thereof:—

"285A. If any child or young person is employed in any ship in contravention of this Act, the master of the ship shall be guilty of an offence, and liable upon summary conviction to a fine not exceeding twenty dollars, and where a child or young person is taken into employment in contravention of this Act on production by or with the privity of the parent of a false or forged certificate, or on the false representation of the parent that the child or young person as the case may be, is of an age at which such employment is not in contravention of this Act such parent shall be liable on summary conviction to a fine not exceeding twenty dollars.

"285B. If the master of a ship fails to keep such a register as is required to be kept by him under this Act or refuses or neglects to produce for inspection by a Shipping Master, Collector of Customs, or other person authorized to make such inspection, any such register as aforesaid or any certificate delivered to him under this Act, he shall be liable to a fine not exceeding one hundred dollars."

6. This Act shall come into force on a day to be fixed by proclamation of the Governor in Council.

7. The said Act is amended by adding the letter "A" after the word Schedule in the title of the existing Schedule and by adding thereto as "Schedule B" the following:—

SCHEDULE B

PART I

DRAFT CONVENTION FIXING THE MINIMUM AGE
FOR ADMISSION OF CHILDREN TO
EMPLOYMENT AT SEA

Article 1.—For the purpose of this Convention, the term "vessel" includes all ships and boats, of any nature whatsoever, engaged in maritime navigation, whether publicly or privately owned; it excludes ships of war.

Article 2.—Children under the age of fourteen years shall not be employed or work on vessels other than vessels upon which only members of the same family are employed.

Article 3.—The provisions of Article 2 shall not apply to work done by children on school-ships or training-ships, provided that such work is approved and supervised by public authority.

Article 4.—In order to facilitate the enforcement of the provisions of this Convention, every shipmaster shall be required to keep a register of all persons under the age of sixteen years employed on board his vessel, or a list of them in the articles of agreement, and of the dates of their births.

PART II

DRAFT CONVENTION CONCERNING UNEMPLOYMENT
INDEMNITY IN CASE OF LOSS OR FOUNDERING
OF A SHIP

Article 1.—For the purpose of this Convention, the term "seamen" includes all persons employed on any vessel engaged in maritime navigation.

For the purpose of this Convention, the term "vessel" includes all ships and boats, of any nature whatsoever, engaged in maritime navigation, whether publicly or privately owned; it excludes ships of war.

Article 2.—In every case of loss or foundering of any vessel the owner or person with whom the seaman has contracted for service on board the vessel shall pay to each seaman employed thereon an indemnity against unemployment resulting from such loss or foundering.

This indemnity shall be paid for the days during which the seaman remains in fact unemployed at the same rate as the wages payable under the contract, but the total indemnity payable under this Convention to any one seaman may be limited to two months' wages.

Article 3.—Seamen shall have the same remedies for recovering such indemnities as they have for recovering arrears of wages earned during the service.

Article 4.—Each member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, protectorates and possessions which are not fully self-governing.

(a) except where owing to the local conditions its provisions are inapplicable; or

(b) subject to such modifications as may be necessary to adapt its provisions to local conditions.

Each member shall notify to the International Labour Office the action taken in respect of each of its colonies, protectorates and possessions which are not fully self-governing.

PART III

DRAFT CONVENTION FIXING THE MINIMUM AGE
FOR THE ADMISSION OF YOUNG PERSONS
TO EMPLOYMENT AS TRIMMERS
OR STOKERS

Article 1.—For the purpose of this Convention, the term "vessel" includes all ships and boats, of any nature whatsoever, engaged in maritime navigation, whether publicly or privately owned; it excludes ships of war.

Article 2.—Young persons under the age of eighteen years shall not be employed or work on vessels as trimmers or stokers.

Article 3.—The provisions of Article 2 shall not apply,

(a) to work done by young persons on school-ships or training-ships, provided that such work is approved and supervised by public authority;

(b) to the employment of young persons on vessels mainly propelled by other means than steam;

(c) to young persons of not less than sixteen years of age, who, if found physically fit after medical examination, may be employed as trimmers or stokers on vessels exclusively engaged in the coastal trade of India and of Japan, subject to regulations made after consultation with the most representative organizations of employers and workers in those countries.

Article 4.—When a trimmer or stoker is required in a port where young persons of less than eighteen years of age only are available, such young persons may be employed and in that case it shall be necessary to engage two young persons in place of the trimmer or stoker required. Such young persons shall be at least sixteen years of age.

Article 5.—In order to facilitate the enforcement of the provisions of this Convention, every shipmaster shall be required to keep a register of all persons under the age of eighteen years employed on board his vessel, or a list of them in the articles of agreement, and of the dates of their births.

Article 6.—Articles of agreement shall contain a brief summary of the provisions of this Convention.

Article 11.—Each member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

PART IV

DRAFT CONVENTION CONCERNING THE COMPULSORY MEDICAL EXAMINATION OF CHILDREN AND YOUNG PERSONS EMPLOYED AT SEA

Article 1.—For the purpose of this Convention, the term "vessel" includes all ships and boats, of any nature whatsoever, engaged in maritime navigation, whether publicly or privately owned; it excludes ships of war.

Article 2.—The employment of any child or young person under eighteen years of age on any vessel, other than vessels upon which only

members of the same family are employed, shall be conditional on the production of a medical certificate attesting fitness for such work, signed by a doctor who shall be approved by the competent authority.

Article 3.—The continued employment at sea of any such child or young person shall be subject to the repetition of such medical examination at intervals of not more than one year, and the production, after each such examination, of a further medical certificate attesting fitness for such work. Should a medical certificate expire in the course of a voyage, it shall remain in force until the end of the said voyage.

Article 4.—In urgent cases, the competent authority may allow a young person below the age of eighteen years to embark without having undergone the examination provided for in Articles 2 and 3 of this Convention, always provided that such an examination shall be undergone at the first port at which the vessel calls.

Article 9.—Each member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

SALARIES AND HOLIDAYS WITH PAY FOR DOMINION PUBLIC WORKS EMPLOYEES

BY an Order in Council, P.C. 1816, approved on October 7, certain classes of employees of the Department of Public Works who were formerly paid hourly rates of wages, were given the option of receiving annual salaries, payable semi-monthly, and holidays with pay. The amounts of the salaries are to be calculated in the manner set forth in the order, which reads as follows:—

The Committee of the Privy Council have had before them a report, dated 2nd October, 1925, from the Acting Minister of Public Works, submitting as follows:—

That, under the authority of an Order in Council (P.C. 1053) dated June 29, 1922, certain classes of employees mentioned therein were exempted from the operation of the Civil Service Act,—the Compensation clause in the said Order in Council reading as follows:—

"That the compensation shall not exceed the salaries provided in the classification schedules and that where prevailing rates are provided as the compensation for a class or where no class schedule exists, the

rates of pay shall be such as are recommended by the Department and approved by the Governor in Council and that the compensation in these cases shall carry no bonus."

That the employees of the Department of Public Works now paid at "prevailing rates" have made strong representations to the department, asking to be paid a fixed yearly prevailing rate, to be paid semi-monthly, and allowed holidays with pay;

That the Minister of Public Works, who has looked into this matter, submits the following proposal, the acceptance of which is to be made optional with each employee, those rejecting the proposal to continue to be paid as at present:—

1. The employees of the Department of Public Works, now paid at prevailing rates, to be paid a fixed yearly salary, payable semi-monthly.

2. The yearly salary rate to be established by multiplying the total possible

standard working hours in the year, including statutory holidays, namely, 2,296 hours, by the prevailing rate of pay per hour the employee is now receiving, and deducting therefrom two weeks' holidays of 88 hours, at the prevailing rate per hour the employee is now receiving, and adding thereto one week of these holidays, 44 hours with pay, at the prevailing rate per hour the employee is now receiving.

3. That any further time lost from any cause whatsoever be deducted from the fixed yearly salary or monthly salary at an hourly rate, established by dividing the yearly salary the employee is receiving by the total working hours in the year, namely, 2,296.

4. As the employee is to receive payment for statutory holidays, no payment for overtime worked will be allowed.

The Minister, believing the above arrangement to be in the public interest, recommends, under the provisions of the Compensation clause above recited (P.C. 1053), that the necessary authority be granted accordingly, the said arrangement to be effective from October 1, 1925.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) H. A. MAY,
For Clerk of the Privy Council.

ASSOCIATION OF GOVERNMENTAL LABOUR OFFICIALS OF THE UNITED STATES AND CANADA

THE Association of Governmental Labour Officials of the United States and Canada held their annual convention at Salt Lake City, Utah, during September. No representative of Canada was in attendance this year, owing to previous engagements. The convention recommended that the several State Labour Departments and Commissions and the Association of Employment Service Commission co-operate in the development of uniform safety codes and wherever possible that State Departments adopt the national standards as the State Standards.

The Association is to have a standing committee on uniform statistical nomenclature, the chairman and other members of which are to be appointed by the president of the Association, with the United States Commissioner of Labour Statistics as secretary. This committee will at the next meeting of the Association report a standard plan for industrial statistics for guidance, particularly with respect to accident prevention. This plan will represent not the maximum which would be desirable, but the minimum which every jurisdiction should prepare both for its own use and for the purpose of affording, by co-ordination through the United States Bureau of Labour Statistics, such information on a national basis.

The convention recommended further action by individual States in regard to the regulation of child labour in view of the recent rejection of the proposed constitutional amendment on this subject. Members were asked to give special attention to the employment of children in agriculture and to the question of migratory labour.

A Committee was appointed to look into

the question of industrial home work—the extent to which such work is conducted in the various states and the methods being taken to deal with the situation; such a study to be made in co-operation with the United States Children's Bureau and the United States Women's Bureau and report to be made to the next convention of the Association.

The Association also recommended that attention should be given to the need for the highest degree of training and efficiency on the part of industrial inspectors, as the success of safety codes depends upon their skill and intelligence. The question of the employment of married women in industry is to be studied during the coming year.

The convention recommended that the members of the Association should co-operate as far as possible with the International Labour Office in securing uniform labour laws and uniform labour statistics.

The next convention will be held in the State of Ohio in May or June next year.

Union for Domestic Workers in Mexico

A trade union has been organized recently in Mexico, under the title, "Syndicate of Home Workers," composed of cooks, housemaids, washerwomen and every class of domestic employees.

Under the proposed rules of the new union every servant shall work for only eight hours a day and shall have one day's rest each week. She shall have ten days' holidays every year with full pay, while pay at double rates is to be made whenever a servant works extra time over and above her eight-hour day shift.

CANADIAN GOVERNMENT ANNUITIES

Effect of Recent Amendments to Annuities Act

ON the recommendation of the Hon. James Murdock, under whose direction the Annuities Branch of the Labour Department is administered, Parliament at its present Session amended the Annuities Act by reducing the minimum annuity purchasable from \$50 to \$10,* the object of the amendment being to make it possible for the people of Canada to purchase at any time and at any age Single Premium Cumulative Annuities of a minimum amount of \$10, and also to provide an alternative proposition to submit to employers and employees. This completes and rounds out what economists of all countries admit to be one of the most complete, far-reaching and scientific attempts ever made by any Government to solve the old age dependency problem by the purchase of annuities under State supervision.

Under the Cumulative Single Premium System each purchase is complete in itself, and the number of annuities which a purchaser may buy is limited only by the fact that the Act restricts the total amount purchasable to \$5,000. Any person capable of making the most elementary mathematical computations will be able from the table of rates which may be had on application to the Superintendent to calculate for himself what the cost of an annuity would be. It may be mentioned, however, that a man of 20 would pay for an annuity of \$10 to begin at 65, and to be paid from that age as long as he lived, \$7.89 on Plan B or \$15.10 on Plan A. Under Plan A, if the annuitant should die before the annuity falls due, a return would be made in one payment of the amount paid in with 4 per cent compound interest added. At age 21 the rate on Plan B is \$8.25, and on Plan A \$15.70. At 22 it is \$8.63 on Plan B, and \$16.33 on Plan A, the premium increasing with each attained birthday. At age 50 the premium will have increased to \$33.66 on Plan B, and to \$48.97 on Plan A. If he desired to secure an annuity of \$600 to begin at 65 he would have to purchase sixty annuities of \$10 each, or thirty of \$20 each. He would not be required to purchase a prescribed number of annuities in any one year, but as the rate increases each year it would behoove him to "stock up" during his early years. The rates are so reasonable, there being no loading for expenses of any kind, that any young

person may make with comparative ease under this plan of purchase his old age absolutely secure from want or poverty. As the purchaser sees his annuities grow, a strong incentive is created to continue the purchase and increase his holdings. The annuity may start at any age desired, but the later the age to which it is deferred, and the earlier the age at which the purchase is made, the smaller will be the amount to be paid.

The Cumulative Single Premium Plan of purchase the Department believes will meet the circumstances of many who have allowed the years to slip by without having made any systematic effort to provide for their declining years. Such persons, if they have an amount which they could invest to secure a Deferred Annuity at 65 of whatever amount this sum would purchase, could add thereto by the purchase from time to time at their convenience of \$10 Annuities.

The Cumulative Single Premium Plan of purchase will meet also, it is believed, the requirements of many employers who have been and are desirous of assisting their employees in making provision for the days when there will be no longer any pay cheque, but who have been averse, having regard to the fact that lean years are unavoidable, and have in the past come with alarming frequency, to being tied up to contribute specific amounts at regular periods. It should meet also with the approval of the employee, as the annuity becomes his property as soon as purchased, and no matter what may happen in the years to come to the business of the employer this would not affect the employee's annuities already acquired, as they would be his own property, and would be in his possession. An employee with the knowledge that on attaining a certain age he would be assured of an income for the rest of his life, an income which his employer had assisted him to purchase, might be expected to render meantime more efficient service to his employer than would an employee who was drifting along constantly harassed by the fear of an old age of dependence.

Employers have been endeavouring for many years to evolve a pension system, but after careful investigation and consideration of the various systems in operation in the United States and elsewhere have come to the conclusion that a system operated under

*LABOUR GAZETTE July, 1925, page 665.

Government control and supervision is the only one that will bring a full measure of satisfaction to employer and employee alike. It is believed that the adoption of a pen-

sion system would harmonize the relations between capital and labour as nothing else could do; would do much to secure that continuity of service which all employers

1. Under Plan B there would be no return to the estate in the event of death.

2. Under Plan A in event of death before annuity begins all payments made with 4% compound interest will be refunded.

3. Under the 10-year Guaranteed Plan in event of death before annuity begins all payments made with 4% compound interest will be refunded. In event of death just after annuity begins the annuity will be paid for 10 years in any event. If the annuitant survives the 10 years the annuity will continue for life.

realize is essential to the successful operation of their industries; and would reduce to a minimum the labour turnover which seems periodically to seize upon the younger workmen, and which is a nightmare to employers. Any plan projected by the Government would have behind it the security of the whole of the Dominion of Canada, would be built up on a reserve basis, and would be absolutely solvent. The contracts would be issued by the Government, and the employee could rely on receiving his annuity cheque when due. There would be no passing of dividends.

It is not the intention of this article to treat of the Annuities System as a whole, but merely to explain briefly the application of the recent legislation. It may be said, however, that the people of Canada are manifesting an increasing interest in the Annuities Scheme, are purchasing Deferred, Immediate, and Last Survivor Annuities on the different plans on which these may be obtained, and have already paid in to the Government for the purchase of such annuities over ten millions of dollars. The System has been advertised throughout the length and breadth of the Dominion, but if there should be any one in Canada who is still in ignorance of its splendid provisions and

facilities for saving for old age and who desires information on the subject, a request to the Annuities Branch of the Labour Department, Ottawa, will bring the Handbook of information by return mail.

The accompanying table will show the single premium required to be made at each age between the ages of 5 and 65 to secure an annuity of \$10 to begin at 65 on Plans A, B, and the 10-year Guaranteed Plan.

Association of Workmen's Compensation Boards of Canada

The association of workmen's compensation boards of Canada held its annual meeting at Vancouver, B.C., during September, under the presidency of Mr. H. G. Wilson, of Winnipeg. Many administrative questions were discussed, including that of the share which should be taken by Workmen's Compensation Boards in the work of accident prevention, the convention being in favour of amendments to the several provincial acts that would give the Boards full authority in connection with the enforcement of safety regulations in all the industries to which they apply.

Mr. E. S. H. Winn, K.C., chairman of the Workmen's Compensation Board of British Columbia, was elected president for the ensuing year.

Social Insurance in Poland

The Department has received a volume entitled "Social Insurance in Poland," published by the Ministry of Labour of the Republic of Poland. This report was distributed to the delegates of the Seventh International Conference of Labour in Geneva. It is interesting as showing how a young country, confronted with many internal and external difficulties, has succeeded in accomplishing an important work in advanced social legislation.

The report gives an analysis of the statute of May, 1920, providing for compulsory insurance against sickness. This was the first Polish law, which replaced the laws of the former régime. In the beginning of 1925 there were 229 local branch offices for insurance against sickness with 1,000,000 insured, making, with the families, a total of 4,200,000 persons. In 1924 the number of medical consultations amounted to 11,000,000; the dues paid to 64 million zlotys (1 zloty equals a gold franc). In Warsaw, a city with one million inhabitants, the insurance against sickness covers 40 per cent of the population.

Social insurance in Poland extends not only to sickness but also to accidents, invalidity, old age and death. There are no special arrangements for different professions or trades,

with the exception of State railway employees, who are under a special régime. Accident insurance in 1924 covered 317,000 employers and 2,000,000 workpeople. In the same year, the number of pensions paid to the victims or to their survivors amounted to 61,000 with approximately 874,000 zlotys monthly. The pensions for invalidity, old age and death amounted in 1924 to 1,300,000 monthly for the former Austrian and German districts alone.

Insurance against unemployment was begun under a statute of July 18, 1924 and is expected to cover the entire territory of the Republic within one year. Poland took this step in consequence of the economic crisis which followed the stabilization of the currency. A special fund against unemployment was instituted, and from October, 1924, to January, 1925, approximately 10 million zlotys went from this fund to help 76,000 unemployed. It should be noted also that Poland offers the same benefits to foreign workmen as to her own citizens. In the matter of accidents, invalidity, old age, death and unemployment the Polish law exceeds the requirements of the various plans recommended by the International Labour Conference.

WORKMEN'S COMPENSATION IN MANITOBA IN 1924

THE report of the Workmen's Compensation Board of Manitoba for the year 1924 is the fourth report published by the Board since the Province adopted the plan of exclusive state insurance against industrial accidents which is followed in the compensation acts of five other provinces of the Dominion. The act of 1916 had established an accident fund made up of contributions from private insurance companies, in which employers were obliged to insure themselves against the risk of accidents to their employees. The act of 1920 set aside the agency of private companies, and is applicable to all cases of compensable injury arising subsequently to January 1, 1920, when the new act became effective. The act of 1916, however, remains in effect in regard to all cases which arose during its existence, that is from March 1, 1917, to December 1, 1920.

During 1924 the Board received reports of 8,949 accidents, as compared with 9,546 in 1923, a decrease of 6.3 per cent. The falling off was largely in the steam railways, in which class the number of accidents fell from 5,152 in 1923 to 4,590 in 1924.

The figures showing the degree of disability resulting from these accidents by groups are not yet published for 1924, but these groups in 1923 were as follows:—

Medical aid only..	1,959
Temporary Disabilities (over three days).. . . .	3,297
Permanent total disabilities..	3
Permanent partial disabilities..	173
Fatal cases..	37
Rejected cases..	164
Minor disabilities (under three days, no expense)..	3,896

The moneys disbursed by the Board during 1924 amounted to \$757,148.11, as compared with \$670,524 during 1923, an increase of \$86,624.61 or 12.9 per cent. The number of cheques issued by the Board during 1924 totalled 21,941, as compared with 20,934 issued during 1923, an increase of 1,007, or 4.8 per cent. The value of Board orders during 1924 for the payment of compensation, which includes orders respecting Dominion Government employees, and covers the amount set aside to reserve to provide for future payments in fatal and permanent disability cases, was \$763,418.76, as compared with \$844,289.27 during 1923, a decrease of \$80,870.51, or 9.6 per cent.

During 1924 the Board's Chief Medical Officer treated 858 cases of minor injury for which, had the usual fees been paid, the sum of \$6,580.50 would have been disbursed. This

compares with 870 cases treated during 1923, the fees chargeable amounting to \$6,621.50. The aggregate days of disability for all cases so treated in 1924 was 3,944, an average of 4.6 days per case, as compared with an average of 3.3 days per case during 1923. At December 31, 1924, 381 person were in receipt of payments with respect to fatal accidents grouped according to their relationship to the deceased workman. These dependents included 114 widows, 234 children, 13 fathers, 17 mothers, and 3 sisters.

During 1924 the Board assessed 3,701 employers in class "G," (that is, "General body of employers") as compared with 4,116 during 1923, a decrease of 10.08 per cent. The actual payrolls on which employers were assessed in 1923, and the assessment paid by employers in the various classes for the same year were as follows:—

1923

Class	Actual payrolls	Assessment paid
	\$	\$
A. Canadian Pacific Railway..	9,991,116 72	129,715 98
B. Grand Trunk Pacific Railway.....	1,053,194 84	12,112 21
C. Canadian National Railways.....	11,731,191 14	154,083 74
D. Province of Manitoba.....	1,731,191 14	21,102 11
E. City of Winnipeg.....	2,390,064 09	44,680 39
G. General Body of Employees	27,436,271 00	434,438 84
H. Winnipeg Electric Railway.	2,450,742 85	23,456 46

During 1924 the Board audited the payrolls of 3,386 employers in 151 cities, towns and villages throughout the Province.

The cost of administration of the act during 1924 was \$70,727.54 allowing for the sum of \$7,493.05 charged to the Dominion Government for administering the Dominion Act (Statutes of 1918, chapter 15), and also deducting \$6,580.80 charged to the various classes of employees as additional medical aid.

Accidents in 1923.—The report contains an analysis of the compensable accidents which occurred in 1923. In the general industrial class 68,334 days, or an average for each case of 20.73 days, were lost as the result of temporary disability, and 28,270 days, or an average of 160.62 days, through permanent disability. The average of all classes of workers is given as 35.53 years, and the average weekly wage at \$25.45.

The causes of accidents are analysed as follows:—

—	Temporary disability	Permanent disability	Death
Prime movers.....	73	9	1
Working machines.....	313	46	1
Hoisting apparatus.....	44	2	4
Dangerous substances.....	139	4	5
Stepping on or striking against objects.....	354	3	1
Falling objects.....	111	7	0
Handling objects.....	1,172	30	0
Tools.....	287	11	1
Runaways and animals.....	53	2	0
Moving trains, vehicles, etc.....	206	23	18
Falls of persons.....	357	19	4
All other causes.....	188	20	2
	3,297	176	37

MINIMUM WAGES FOR FEMALE EMPLOYEES IN ONTARIO IN 1925

THE Ontario Minimum Wage Board, in its report for 1924, states that during the four years since the minimum wage act took effect it has pursued the policy of engaging the sympathy and co-operation of both employers and employees. Consequently it has had the assistance of the great mass of those who are directly engaged in the industries of the province. The Board is assisted in its work by the provincial factory inspectors, who continually report any establishment in which the minimum wage orders are not posted as required. The factory inspectors also, when requested by the Board, interview employees and employers, thus saving the expense of maintaining a separate force of inspectors. The Board meets the chief factory inspector every two weeks for the consideration of matters requiring investigation. Up to the present time all difficulties that have arisen out of minimum wage orders have been settled pacifically, the Board's experience being that orders are more often violated through ignorance, inattention or inefficiency than from an intention to defraud the workers.

The whole industrial field, as far as female workers are concerned, has now been almost covered by orders, but a few trades of exceptional type still remain. There is also the problem of home work, which no Board on this continent has yet attempted to solve, but which is one of great importance for many wage-earning women. The Board intends shortly to give its attention to this question.

The year 1924 was one of trade depression, and the Board had the task not only of raising the wages that were below the level of subsistence, but also of keeping existing rates from falling below that line. The figures given in the report show the extent to which low wages have been raised, but there is no

Of the 176 permanent disability cases, 59 occurred in the steam railway group, 10 in bricklaying, 9 in sawmills, 7 in metal manufacture, the remainder being distributed through the various industrial groups, while 19 of the 37 fatal accidents occurred on steam railways, 3 in lumbering, 2 each in cement manufacture, power line construction, power line operation, and electric railways, and one each in abattoirs, operation of grain elevators, iron and steel works, manufacture of gasoline, etc., natural ice, window cleaning and wholesale establishments.

available measure of the extent to which the Board has been successful in maintaining at fair levels wages which would otherwise have fallen below the minimum standard.

The minimum wage schedules are based on the estimated cost of living, and the Board is therefore obliged to follow the variations in the prices of the various commodities consumed by the average working working woman. For this purpose a standard budget has been drawn up, representing the average expenditure of a saleswoman in Toronto, with allowances for board and lodging, clothing and sundries. This budget forms the basis from which the living expenses of women in other industries and places are estimated. The various items in the budget for one year are as follows:—

Board and lodging at \$7 per week.. . . . \$364 00

Clothing—footwear and repairs (3 pairs, \$5, \$4, \$4; bedroom slippers, \$1, rubbers, \$1; repairs, \$2), \$17; stockings, 8 pairs, \$6.40; underwear \$8.50; nightgowns, \$4; petticoats and bloomers, \$5; corsets, 3 pairs, \$4.50; corset covers, \$3; kimona, (2 years), \$1.25; hats (2 hats) \$11; suits (half cost, to wear 2 years) \$11 (or skirt (1 year), \$5, and light coat (2 years) \$12; winter coat (half cost, to wear 2 years) \$9 winter dresses, \$10; summer dresses, 2 or 3, \$12; shirt waists, 3, \$8.25; sweater (2 years) \$2; aprons, \$2.50; handkerchiefs, \$2; gloves, \$4; scarf, \$1.75, and umbrella, to last 2 years, \$1.25 124

Sundries—Laundry, \$39; Doctor, dentist, optician, \$20; car fare, \$39; reading matter, \$6; postage and stationery, \$5; recreation and amusement, \$23; church and charity, \$10; incidentals, including brush, comb, soap, tooth paste, talcum powder, nail file, shoe polish, hand lotion, pins, needles, thread, whisk, shoe laces, etc. 20

Total expense for sundries.. . . . 162

Total expenses for year.. . . . 650 40

On the basis of the foregoing disbursements for one year, the weekly cost of board and lodging would be \$7; clothing, \$2.39 and sundries, \$3.11, or a total of \$12.50 per week.

The first twenty orders of the Board have now been in force for three successive years, and for these years comparative statistics as to employment, hours, and wages are available. Similar comparisons for nine other orders are shown for two years. These comparisons show that an advance has been made in average weekly earnings in the industries covered by the Board, with only one or two exceptions, the most pronounced increase being in retail stores in Toronto, in which the average weekly wages rose from \$13.25 in 1921 to \$16.07 in 1924, and in the drug and chemical group, which advanced from \$12.86 in

1923 to \$14.34 in 1924. On the other hand slight declines were noted as between 1923 and 1924 in confectionery manufacture in country districts, and in textile factories in Toronto and in small cities and towns, while a slight fall occurred in the needle trades in cities over 30,000 outside Toronto as between 1922 and 1923, followed by a recovery in 1924. A similar movement was recorded in departmental stores in Toronto. The accompanying table shows the average wages paid and the average hours of work in 1924 in the various industries covered by orders of the Board.

AVERAGE WEEKLY WAGES AND HOURS OF FEMALE EMPLOYEES IN VARIOUS INDUSTRIES IN ONTARIO

	Firms	Female Employees		Average Weekly Wage		Average hours per week

Order governing Restaurants and Refreshment Rooms

The Minimum Wage Board of Ontario recently issued order number 40, governing female employees in restaurants and refreshment rooms in cities of 30,000 population or over, excepting Toronto. The order, which took effect on September 15, fixes a minimum rate for all such employees of \$12 per week, applicable to all female employees working 36 hours or more in the week. If an employee works more than 50 hours a week she is to be paid in addition at least 24 cents per hour for all time over 50 hours. Short time for employees regularly working a full week is to be calculated in proportion to the normal

length of the weekly period. An employee regularly working less than 36 hours per week is to be paid at a rate not less than 24 cents per hour. No reduction of the minimum rate for apprentices is allowed by this order.

Lodging is not to be charged for in excess of a rate of \$1.50 per week, or board in excess of a rate of \$4.50 per week, or single meals in excess of a rate of 25 cents per meal.

No deduction below the minimum wage line for absence is to exceed the value of the time lost.

Employees serving light drinks and ice cream from counters are classed as saleswomen and do not come under this order.

EARLY CLOSING OF RETAIL STORES IN CERTAIN PROVINCES OF CANADA

THE City Council of Montreal recently appointed a commission to study the question of the hours of closing of retail stores in the city. It had been proposed that the existing early closing by-law should be repealed, this proposal being strongly opposed by the retail employees' association.

The existing by-law, which was passed in August, 1919, provides as follows:—

Article 2.—Except as otherwise hereinafter provided, stores in the city of Montreal shall be closed at 7 o'clock in the evening on Monday, Tuesday, Wednesday and Thursday of each week, at 9 o'clock in the evening on Friday and at 11 o'clock in the evening on Saturday, and shall remain closed until 5 o'clock in the morning, the following day. The said stores may, however, remain open until 11 o'clock in the evening on the hereinafter mentioned days: (a) The day preceding the following holidays: Epiphany, Good Friday, Immaculate Conception Day, Empire Day, Dominion Day, All Saints Day, Ascension Day, Labour Day and Thanksgiving Days; (b) the last days of the month of December of each year, from the 15th of said month inclusive; (c) the days of the week preceding Easter Day; (d) the day before the eve of the following holidays of the Jews: the first day of the year, Atonement Day, Passover Day, the feast of the Tabernacles and the feast of the Pentecost.

Article 3.—Notwithstanding the above provisions, tailors, merchant tailors, milliners and women dealing in novelties and needle-work may keep their stores open until 9 o'clock in the evening on Monday, provided that the services of no employees be retained between 7 o'clock and 9 o'clock in the evening.

The by-law does not apply to such establishments as sell only tobacco, newspapers, flowers, confectionery, ice cream or similar articles, or to drug stores. The taking of orders after closing hours by telephone or otherwise, is forbidden. However, the sale of articles which may be required in cases of death, illness or accident, is permitted in all cases of stores during closing hours.

Another by-law passed in 1920 regulates the hours of closing of barber shops in the city as follows:—

Article 3.—Barber shops, in the city of Montreal, shall be closed every evening, during the week, at 8 o'clock, and shall remain closed until 7 o'clock a.m. the following day, except on Saturdays and the days preceding the holidays mentioned in paragraph 24 of Article 36, of the Revised Statutes of the Province of Quebec, 1909, when the said shops may remain open until 11 o'clock p.m., and during the hours the said shops must be so closed, no clients shall be admitted therein. Any work which has been begun previous to the hour fixed for closing may, however, be completed.

The report of the municipal commission, which was presented to the city council in September, shows the practice which prevails in other cities in Quebec and throughout various parts of Canada in respect to the hours of retail stores.

Quebec.—At St. John's the early closing by-law requires the stores to be closed at 7 p.m. on Mondays, Tuesdays and Wednesdays in January, February and March; on Tuesdays, Wednesdays and Thursdays in April, May and June; on Mondays, Tuesdays, Wednesdays and Thursdays in July, August and September; on Tuesdays, Wednesdays and Thursdays in October and November and on Tuesdays and Thursdays in the fifteen first days of December. The stores are to remain open every night during the last fifteen days of December. At Sorel an early closing by-law has been in existence for the last 15 years and has proved satisfactory. In Quebec city all stores close at 7 p.m. every night in the week except on Saturdays and on the eve of holidays when the closing is 9 p.m. As the by-law was not being observed in regard to Saturday closing, the Retail Merchants' Association recently asked the council to amend the by-law by requiring the closing to be at 10 p.m. on Saturdays and on the eve of holidays, at midnight from December 20 to 31, but no change has been made in the regulation except for the period between the 20th and 31st December. At Three Rivers the early closing hours are 6 p.m. on Mondays, Tuesdays, Wednesdays and Thursdays, and at 9 p.m. on Fridays, except on the eve of holidays and during the period between December 15 and January 1, for all novelty, furniture, etc., stores; in jewellery, grocery and butcher shops, etc., at 7 p.m. on Tuesdays, Wednesdays and Thursdays, except on the eve of holidays; and in the jewellery, watch-making shops, etc., on all days in December except holidays. Barber shops must close at 8 p.m. except on Saturdays and on the eve of holidays, when they may remain open until midnight.

Prince Edward Island.—The Provincial Retail Merchants' Association informed the Commission that no act has been passed in regard to early closing, and that the matter is left to the merchants to decide, being finally adjusted by the association. In Charlottetown, the stores close at 5.30 p.m. all year round except on Saturday, when they remain open until 9.30 p.m. During the summer months, all stores are closed at 12.30 p.m. on Wednesdays.

New Brunswick.—The closing hours of stores in New Brunswick is regulated by a provincial statute which requires any branch of com-

mercial business to close not later than the hour fixed by the statute, upon petition signed by three-fourths of the merchants affected, the hour so fixed being 6 p.m. on all week days except Saturday. At Fredericton, all stores except groceries, close at 6 p.m. At St. John early closing is observed only by the furniture dealers. Owing to the great number of Jewish merchants in the province, the regulation governing shorter hours cannot be carried out as the larger stores close at 6 p.m., and the smaller ones at 10 or 11 p.m.

Ontario.—The Commission was informed by the Retail Merchants' Association that early closing in Ontario is governed by provincial statute, but the half-day closing may be fixed for any day in the week upon a petition of 75 per cent of the merchants interested, and the municipal council is required to adopt a regulation in conformity therewith. Many of the municipalities make local arrangements which are almost in every case satisfactory. At Toronto several

branches of trade are subject to a by-law requiring them to close at 7 p.m. except on the eve of certain holidays and during Christmas week. Since the exclusion of fruit and green grocery stores from the list, it has been found difficult to carry out the provisions of the by-law owing to the great number of stores which carry not only fruit and greens but certain lines of groceries. At Ottawa and other important cities charter amendments fix the closing of all stores at 6 p.m.

Manitoba.—Retail stores in Winnipeg are required to close at 6 p.m. every day in the week except on Saturdays, on the eve of holidays, and in the last three weeks in December, when the closing is at 10 p.m. Confectionery and tobacco shops, as well as restaurants and others, are not included in this list. There is considerable difficulty in enforcing the by-law in stores in which the sale of certain articles is permitted and the sale of other articles prohibited. Early closing by-laws exist in Brandon, Portage la Prairie, Dauphin and in other cities of the Province.

Strike of Bank Clerks in France

A strike of bank clerks broke out recently on a large scale in France. It began in Marseilles on July 24, whence it spread to Paris, where a strike was declared on July 27 in all the principal Paris banks except the *Société Générale*. The strike subsequently spread to other large towns, and was practically general by August 6, the number of strikers amounting to 20,000 in Paris and 40,000 in the provinces.

Banking institutions have developed very considerably of late years in France, and this growth has been accompanied by a parallel increase in the number and membership of organizations of bank employees. The result has been the formation of a species of banking proletariat, and the various employees' organizations, grouped in a national federation, have for long been carrying on a considerable agitation throughout the whole country with a view to giving publicity to their claims.

The strike was primarily due to demands on the employees' part for a higher scale of wages, rates and pensions. The strikers apparently received the almost unanimous support of public opinion and of the press. Attempts to secure a settlement by conciliatory means were made by the Minister of Labour and the Minister of Finance. The strike came to an end on September 11th, a majority of the bankers having agreed to accept a collective agreement proposed by the employees.

Immigration into Canada in 1925

Immigration to Canada for the first four months of the fiscal year ended July 31st amounted to a total of 40,608, of which 19,217 were British, 6,874 from the United States, and 14,517 from other countries. In the same period 12,170 Canadians who had been absent in the United States for six months or over returned to Canada with the intention of making their permanent residence in this country. If the returned Canadians are added to the general immigration the total for the four months is 52,778.

Immigration for the month of July consisted of 3,123 British, 1,567 from United States, and 3,469 from other countries.

The total number of Canadians who have returned from the United States since April 1, 1924, after settling in that country for six months or longer, and now with the intention of remaining permanently in Canada, is 55,945.

According to official statistics compiled by the Co-operative Union, the membership of distributive co-operative societies in Great Britain increased from 4,618,819 in 1923 to 4,752,636, this being the greatest annual increase since 1920. It is estimated that the membership figures for 1924 represent a community of nineteen million persons served by these societies.

CANADIAN COUNCIL ON CHILD WELFARE

THE fifth annual conference under the auspices of the Canadian Council on Child Welfare was held in Ottawa from September 28 to October 1, 1925. The conference was divided into three sections and the programme of each organized so that every participating organization took an active part in the proceedings. The following outline indicates the nature and scope of the papers and discussions:—

Section A.—Social hygiene and child welfare; The child and tuberculosis; Mental hygiene and child welfare.

Section B.—The mother and child in the outposts; Child placing in rural areas; Essentials of normal childhood physique.

Section C.—The Central Placement Bureau; The Ethical and spiritual development of the child; Family desertion.

September 28 was devoted to executive and general business meetings including reports on progress during the past five years in each of the following branches of the Council's work: (a) Provincial legislation; (b) Child health; (c) Child labour; (d) Education and recreation; (e) Delinquency problems; (f) Mental hygiene; (g) Dependency and neglect; (h) Ethical and spiritual development of the child.

A summary of the work of the Council during the past five years was presented by Miss Charlotte Whitton, Honorary Secretary. The general meetings were presided over by Mrs. C. H. Thorburn, Ottawa, president for the past and ensuing years. Each evening special open meetings were held at which prominent health, social science and social service workers addressed the delegates and public.

A special session on juvenile immigration was held on September 30, at which Mr. Percy

Roberts, of the Barnardo Homes, London, England, described the organization and methods of juvenile immigration as carried on between England and Canada. He pointed out the safeguards which exist for excluding all but healthy, desirable young people and expressed the desire on the part of British organizations to do everything in their power to safeguard the interests of the children. The discussion revealed considerable difference of opinion as to the effectiveness of the methods now employed and as to the advisability of admitting juvenile immigrants to Canada unless they come as members of a family. It was felt that supervision of those now in Canada should be continued until the age of twenty-one rather than eighteen as at present and that greater care should be taken to exclude mentally defective children. The opinion was expressed by several speakers that juvenile immigration as at present conducted is a form of child labour which should be discontinued. It was stated that no child under fourteen could now be brought into Canada for adoption or boarding arrangements (LABOUR GAZETTE, September, 1925, page 857). Hitherto children have been sent from Great Britain before they were fourteen in order that they might become members of Canadian families and thus be more easily trained in Canadian customs. Co-operation among emigration agencies, federal and provincial authorities and Canadian organizations was urged by members of the Council.

At the annual business meeting held on Thursday afternoon, October 1, the following standards and problems for investigation and research were adopted as a programme for the next five years:—

Five-Year Program, 1925 to 1930

Subject to the right to enlarge or modify its statement of programme at any annual meeting the Canadian Council on Child Welfare adopts the following declaration of aims for the guidance of its members and officers during the five year period beginning October first, 1925.

A—ON HEALTH

1. Support of the movement toward the establishment of a Federal Ministry of Health which shall assume responsibility for general research in preventive medicine and co-operation with Provincial health bodies in the dissemination of health literature and in providing specialized clinics.

2. Support of effort in each province toward setting up a Provincial Department or Bureau

of Health which shall either provide or co-operate with municipalities in providing, in addition to facilities for sanitation and disease control, the following clinical service.

- (a) For pre-natal and pre-school guidance.
- (b) For physical and mental examination of all school children not less than three times during their school career and making application for work permits.
- (c) For special physical and psychiatric service to problem cases—both children and adults.

3. Encouragement of research in Canadian universities and colleges on matters affecting the health and well-being of children.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Ontario Division of Industrial Hygiene

THE forty-third annual report of the Provincial Board of Health for Ontario outlines the work carried on during 1924 by the various branches of the Department of Health. The Department was established under the Public Health Act, 1924 (LABOUR GAZETTE, June, 1924), to take over the administration of the Public Health Act and the other acts relating to the protection of the health of the people of the province. Under existing arrangements the Minister of Health is also Minister of Labour. Separate sections of the report dealt with the measures taken during the year for the prevention of diseases and for the education of the public in health matters. Progress is reported in connection with maternal and child hygiene and sanitary engineering, and the work carried on by the Department in its laboratories is described.

The most interesting section, from the point of view of labour, is that which describes the work of the Division of Industrial Hygiene. The purpose of this Division is the prevention of disability among wage earners by means both of public instruction and of actual measures taken to reduce the waste which results from this cause. The Department is in fact doing the same work as is carried on in the numerous industrial health services in individual plants in the United States. Increasing interest in the Department's work has been shown lately by both employers and workers, many inquiries having been received on problems affecting the health of workers. The Department has also assisted employers in dealing with such problems as the measurement of the amount of lead or benzol in the air, ventilation, the organization of "plant services," the prevention of specific diseases, etc. The Division now receives sickness records from an increasing number of plants than formerly, and a new record of industrial sickness is thus being accumulated for Ontario.

Doctors and Nurses.—The number of industrial nurses is steadily increasing, their work lying chiefly in reducing the risk of infection in cases of injury. There has also been an increase in the number of physicians associated with industry. The report states that while the great majority of physicians still only come into touch with industry when they are called to treat a worker injured during his employment, yet there is an increase in the number of physicians who are employed on a part-time basis, with some re-

sponsibility for health work done in the plant and with corresponding opportunity to apply the principles of preventive medicine in the maintenance of the health of the workers. They may be employed as physicians to plant "benefit societies," and as records are kept in these societies a reduction in lost time from sickness is at once apparent; or as part of a definite programme instituted by industrial executives for the prevention of sickness, entirely apart from its treatment. The Department finds that the latter is a much more satisfactory arrangement.

Moreover the Department has been asked by physicians not directly connected with industry to furnish information on such subjects as the hazards of electrical welding, the infection of wounds in abattoirs, the best methods of conducting periodical physical examinations of workers. The Department is asked also for its help in such work as special examinations of men exposed to lead or silica dust.

Occupational diseases.—Schedule 3 of The Workmen's Compensation Act contains a list of seven occupational diseases for which compensation is paid. Reports received by the Division show that twenty-two cases of occupational disease were compensated during the year. By the regulation of the Workmen's Compensation Board, dated December 24, 1924, stone worker's or grinder's phthisis due to employment in quarrying or in cutting, crushing, grinding, or polishing of stone, or in grinding or polishing of metal; and benzol poisoning due to employment in any process involving the use of benzol were added to this list. When silicosis is sufficiently far advanced to produce disablement the condition proceeds progressively and fairly rapidly to a fatal issue. To be effective in the prevention of permanent disability compensation should be paid before the condition becomes disabling.

Of interest in connection with the occupational disease side of the Division's work has been the activity of the Occupational Disease Committee of the Ontario Medical Association in the effort to further information among practitioners as to the incidence and diagnosis of occupational diseases. The Division has prepared two memoranda, one dealing with the diagnosis of lead poisoning and one dealing with nickel rash, for distribution by this Committee to the profession in Ontario. By request a programme dealing with different phases of industrial hygiene is in course of preparation by this Division.

Recommendations.—(1) There is a serious lack of co-ordination between the different government bodies at present concerned with the worker's health, especially The Workmen's Compensation Board, the Factory Inspection Branch of the Labour Department, and the Industrial Hygiene Division of the Provincial Department of Health. A first-hand study should be made of the different methods of factory medical inspection in England and in some countries of Europe, with a view to judging how best industrial health activities can be administered. It should be possible to build up a service which could co-operate with industry in the prevention of disability.

(2) Serious consideration should be given to the recognition of the idea that the prevention of accidents and occupational diseases is a necessary part of the Workmen's Compensation law. The Workmen's Compensation Act in Ontario at present is not the potent influence for the prevention of disability among workers which it should be. The employer who effects a real reduction in accident cost in his plant pays for his efforts in prevention and at the same time continues to pay a high percentage of his compensation cost. This tends to destroy the initiative to cut down disability.

(3) There is need of some system for notification by physicians of cases of occupational disease.

(4) Legislation should be brought in providing for compulsory periodic physical examination of exposed workers in:—

(a) Certain lead trades; for example storage battery manufacture.

(b) The chief trades where benzol poisoning is a hazard; for example, the rubber trade.

Sanitary Inspection.—The chief sanitary inspector notes with satisfaction that organizations such as the Canadian Pulp and Paper Association, the Canada Lumbermen's Association and the Accident Prevention Association are now taking very active interest in safety work. The new arrangement whereby the inspection staff is placed under the Division of Industrial Hygiene has opened up new opportunities for investigation and for developing health education. "Without going outside the division, the chief inspector says, "I believe the present arrangement, being part lay staff and part medical, is a combination which should be able to cope with almost any situation which may arise."

The extent of the work carried on by inspectors is shown by the fact that in the lumbering industry they cover the operations of 269 companies with 843 camps employing 50,591 workmen.

Coal Miners' Health and Welfare

A valuable study of the coal miner, his health, diseases and general welfare, is contributed to the *Journal of Industrial Hygiene* by Dr. E. L. Collins, professor of preventive medicine in the Welsh National School of Medicine. He reaches the conclusion that the "occupation of coal mining is not on the whole an unhealthy one, but the mind of the miner is affected by the special condition of his work and expresses itself in a tendency to strike." These conditions might be improved in various directions. In the matter of food, for example, the mining industry still adheres to the custom, which fifteen years ago prevailed in factory employment, of leaving it to each man to partake of a daily monotonous picnic of unappetizing viands which he has carried with him to work. The industrial canteen has not yet been introduced into the mining industry, even though a pithead kitchen would be simpler to organize than a factory canteen where perhaps 700 workers or more have to be seated at once and served in five or six minutes. Meals from a pithead kitchen could be sent underground in hot, water-jacketed containers placed in empty coal tubs going to various parts of the workings. These tubs would soon reach their destinations, just as tubs containing supplies of beer did in times past, when beer was permitted to be sent into the workings. Miners do not all stop work for food at any definite time, and the service could be extended over an hour or more, thereby avoiding the rush of a factory canteen.

In regard to the industrial diseases to which miners are exposed—mystagmus, beat knee, beat hand and beat elbow, ankylostomiasis and other parasitic diseases, and the diseases caused by exposure to stone dusting, the writer states that miner's mystagmus is now definitely known to be associated with deficient illumination. This disease does not occur among metalliferous miners, who all use naked lights. Occasionally a case is heard of from candle pits, but the illumination in these pits, although greater than that in safety-lamp pits, is low—lower than that of metalliferous mines, owing to the black, light-absorbing surface of the coal. The great bulk of the cases of mystagmus come from safety-lamp pits. The disease was first recognized soon after safety lamps were introduced and has since steadily increased in prevalence. Better illumination is required in order to abolish mystagmus.

Miner's beat knee, hand and elbow is caused by the unusual position in which the miner is required to work. He has often to kneel at his work, and when undercutting coal he lies on his side with one knee tucked

up, the elbow of the same side resting either on his flexed thigh or on the hard floor. If infection gains access through some minute puncture, through sodden skin when the workings are wet, or through the blood stream when the general health is poor, a condition of inflammation and suppurative cellulitis is particularly liable to develop. The handle of the pick, if it is not smooth, or if rock or hard coal is being worked, acts as a source of chronic trauma to the palm, causing "beat hand." The suggested remedies for this group of diseases are the use of knee pads, especially in thin seams, and closer attention to pick handles.

Professor Collis considers that the risk caused by various dusts has not been sufficiently investigated. The lungs become altered by the formation of a fibrous tissue which renders them liable to succumb to tuberculous infection. Personal education, it is suggested, would lessen this cause of lost time and mortality.

Among other proposals the writer suggests that first aid appliances and rescue stations should be placed under medical supervision. Individual instruction as to proper methods of working would lessen fatigue and increase production. Pithead baths would benefit the well-being and the morale of the miners.

Rules for Timbering in Mines

The Mines Department of Great Britain, in a letter addressed recently to owners, managers and secretaries of national and local associations of owners, officials and workmen, makes some suggestions for diminishing the danger of accidents resulting from falls of roof and sides of mines.

Every year over 500 persons—more than half of those fatally injured underground—are killed by falls of roof and side. This class of accident, judged by the death rate reviewed over a period of years, does not show that marked tendency to diminish which it is gratifying to find, for example, in accidents due to explosions and accidents due to shafts. By no means are all the accidents which occur now from fall of ground unavoidable. Approximately two-thirds of the fatal accidents from this cause occur at the working face and the number of these would undoubtedly be reduced if the systematic timbering and spragging of these working places, which is required by the Coal Mines Act, 1911, was more faithfully carried out. Investigating, as they do, all serious accidents the inspectors find repeatedly that accidents from falls of ground at the working face are attributed to ignorance or forgetfulness of the timbering rules or to neglect to comply with them. In nearly 5

per cent of the working places inspected the maximum timbering distances to be fixed by the manager under the act are exceeded.

The following points are briefly set out as being in the opinion of the inspector, of the highest importance:—(1) The building of substantial roadside and other packs in long-wall workings; (2) the general use of substantial head-pieces or lids; (3) the setting of temporary supports at the face before room is made for the permanent timbering; (4) the more liberal use of props and bars (instead of props alone) at the road heads between the canch or ripping and the face. This method of support can with great advantage be extended on either side of the road head in long wall workings and should be general throughout machine-cut faces; (5) the setting of temporary supports when clearing away falls and when relining or renewing timber; (6) the lacing of settings of timber in roadways, or the taking of other precautions to ensure stability; (7) the securing of the roof and sides of cavities above the roadway supports; (8) the more frequent use of safety devices for withdrawing timber.

Danger of Entering Abandoned Workings

Dr. Thomas T. Read, safety service director of the United States Bureau of Mines, warns against entering any place where air does not circulate unless it is ascertained that enough oxygen exists to support life. This warning was given in connection with the death of three persons who entered a well to make repairs to the piping. Wells, abandoned mines, and other confined spaces where the air does not circulate may be filled with black damp, and the incautious person who ventures into them may be asphyxiated. Black damp is a miner's term for air that has become depleted of its oxygen and consists mainly of nitrogen and carbon dioxide. It is not poisonous, but, being heavier than ordinary air, it lies in a confined space like so much water and a person who goes into it is as effectually cut off from the life-supporting oxygen as if he had gone under water. Unless immediately rescued, he will die as quickly as he would by drowning.

The coroner's jury which investigated the death of a painter who was killed at Brockville, Ontario, on September 15, while painting the enclosure around the lightning arrester of a power sub-station, expressed the opinion that men who are inexperienced in electricity, as the deceased, should not be required to work alone while in close proximity to exposed electrical hazards, but should always be accompanied by an experienced man.

NOTES ON LABOUR UNION ACTIVITIES

Canadian Federation of Labour

The twenty-third annual convention of the Canadian Federation of Labour was held in Quebec from September 14 to 18, in the Labour Temple, under the chairmanship of Mr. Alex. Grenier, president of the Union of the Bricklayers of Quebec. The convention was attended by Messrs. Omer Brunet, ex-first president of the Canadian Federation of Labour, Theo. Bertrand, representing the Federal Department of Labour, Ottawa, Felix Marois, Department of Labour of Quebec. Mr. D. Giroux, general president of the Federation, welcomed the delegates and thanked the guests for their attendance to the opening session and for their good wishes.

The report of the Secretary-Treasurer showed that there were 9,500 members of the Federation in good standing. The receipts for the year totalled \$1,749.51, and the expenditure \$932.71.

Thirty-eight credentials were presented and thirty-one delegates were in attendance at the Convention. The report of the general president and officers, discussing different subjects of general public interest was adopted. It was announced that the Amalgamated Society of Carpenters and Joiners had approved by a referendum vote its adherence to the Canadian Federation of Labour.

The convention decided to undertake a general revision of the constitution of the Federation. A long discussion took place on the report of the committee in charge of the *Canadian Trade Unionist*, the official organ of the Federation.

The following resolutions were passed:—

That the executive do take a referendum vote on the question of increasing the amount of the *per capita* tax.

That the secretary-treasurer be instructed to have the books of the Federation audited by a chartered accountant;

That the Quebec Workmen's Compensation Act be amended on the lines of the Ontario Act;

In favour of the nationalization of the coal mines and the other natural resources of the country;

That the Federal, Provincial, Municipal Governments and Railways in Canada should encourage the distribution of the coal mined in Alberta;

That the authority of the family doctor of workmen be accepted in cases of fatal and non-fatal accidents, especially in electrical and other dangerous occupations;

That steps be taken for the incorporation or registration of the Canadian Federation of

Labour, in order to prevent confusion in the title;

That more money be spent for organization purposes;

That the executive board endeavour to secure the passing of a law forbidding working men to send funds to labour unions in the United States, or to draw upon the funds there.

That the Federal Government give preference to the Federation of Bricklayers, Masons and Plasterers and other Building Trades affiliated to the Canadian Federation of Labour in connection with the execution of public works in the Province of Quebec;

That the various Compensation Acts in the provinces of Canada be amended so that a workman should have the privilege of choosing his own doctor, and that medical colleges should be invited to give their support to this proposal;

That the Federal Government be asked to select a member of the Canadian Federation of Labour as a labour delegate representing Canada at the next session of the International Labour Conference in Geneva, and that Mr. David Giroux's name be submitted.

The election of officers gave the following results:—

General president, D. Giroux, Montreal, Que.

Secretary-treasurer, C. Withley, Toronto.

1st vice-president, G. Potts, Toronto.

2nd vice-president, E. Brosseau, Montreal, Que.

3rd vice-president, W. G. McCallum, Toronto, Ont.

4th vice-president, R. Giroux, Quebec.

The names of the provincial vice-presidents who were elected follow: Messrs. A. Marois, Quebec; W. Walker, Beverly, Alberta; A. Barnetson, Toronto.

The meeting place of the next convention was left with the Executive.

Confederation of the Catholic Workers of Canada

The fourth annual congress of the Confederation of the Catholic Workers of Canada was held at Three Rivers from September 19 to 24. Previously to this congress, the Federation of the Building Trades and the employees of pulp and paper mills had a conference where many resolutions of particular interest to those federations were discussed. Many of the delegates assisted on Sunday, September 20, at the mass celebrated in St. Philippe Church. In the afternoon, an address on social insurance was given by the Rev. A. Boileau, chaplain of the syndicates of Montreal. In the evening, a religious and

civic ceremony took place in the City Hall, following which addresses of welcome were given by Monseigneur Cloutier, Bishop of Three Rivers; Mr. Bettez, Mayor, and Mr. Mercier, M.P.P., Notary. These addresses were acknowledged by Mr. Pierre Beaulé, Knight and General President of the Confederation. Letters of regret that they could not attend were received from Hon. James Murdoch, Minister of Labour, Ottawa; A. Gaspault, Minister of Labour, Quebec; and S. Lapointe, legal adviser of the Confederation.

The report of the Committee on credentials indicated that there were present 108 delegates representing 69 syndicates. The report of the Secretary-Treasurer showed an effective force of 25,500 members divided between 96 syndicates, and receipts for the year of \$9,634.93 and expenses of \$8,179.48, leaving a balance of \$1,455.45.

The following resolutions were passed:—

Requesting the Provincial Government of Quebec to amend the provincial Stationary Engineers Act, so that the words "motive power" be replaced by "generative power" in the section providing for the regulation of installations.

Requesting the Provincial Government of Quebec to establish maternity dispensaries in each locality;

Requesting the Federal Government to modify the British preference so that it shall apply more and more to the merchandise entirely manufactured in Great Britain, and if possible that a competent Tariff Commission be named;

Requesting the Provincial Government of Quebec to study the project already submitted for the constitution in the Province of a Superior Council of Labour;

A resolution asking the Federal Government to establish old age pensions for persons of 70 years old and over, was left on the table until the next congress;

Requesting the Provincial Government of Quebec to amend the Fair Wages Regulation so as to require the minister of labour to fix the fair wage rates before contracts are signed, subject to later modifications as required, and to establish schedules of wages to be paid for overtime work.

Requesting the Provincial Government of Quebec to extend the jurisdiction of the Commission of women's minimum wages to women employed in commerce;

Requesting the Federal Government to establish a general tariff of 40 per cent abroad and 20 per cent British preferential tariff for all ships constructed outside of Canada, for service in Canada.

Requesting that the legal working week for

women and girls in the textile industry and cotton mills be 48 hours.

Requesting the Department of Labour of Quebec to require the stopping of motors in the textile industry between 12 noon and 1 p.m., and at 6 p.m., in order to prevent the violation of the existing law of providing for a 55 hour week in this industry.*

Requesting the provincial Department of Labour to see that the health regulations be more respected in the cotton mills, and that ventilation systems be obligatory in working rooms;

Requesting that a uniform trade union label be established in the shoe industry;

Requesting the Legislature of Quebec to adopt a new Workmen's Compensation Act, embodying the recommendations of the labour representatives on the Workmen's Compensation commission (LABOUR GAZETTE, February, 1925, page 151);

Requesting that classes in plumbing be established in the Technical Schools of the Province of Quebec, that the provincial plumbing regulations be respected and inspectors appointed.

Requesting the Provincial Government to grant a bonus to the employment service of the catholic syndicates of Building construction, in the different centres of the Province of Quebec, and that provincial and private employment bureaus confine their activities to the placement of domestics, labourers and lumberjacks, leaving to the organizations the care of the placement of craftsmen;

Authorizing the Executive Board to establish a voluntary system of group insurance to cover death and sickness risks;

Requesting the Council of Public Instruction of the Province of Quebec to make a list of books suitable for school prizes; that all Canadian books given in the catholic schools bear the label of the catholic syndicates;

Requesting that the Catholic unions have equal representation with other unions on public commissions.

Requesting the Federal Government to amend the registration law, in order to permit catholic syndicates to register their label;

Requesting the Provincial Government of Quebec to institute a pension fund for the employees of tramways and other public utilities;

Requesting the Provincial Government to control and look after the installation of the machine Ducau in coach-building factories.

* The Quebec Industrial Establishments Act provides that in cotton and woollen factories no boy less than 18 years old, and no girl or woman shall be employed more than 10 hours in any one day, or more than 55 hours in any one week.

Requesting the Federal Government to have a representative of the catholic syndicates in the Canadian delegation to the International Labour Conference at Geneva;

An extension of two years was granted to the printers' union to join the Federation of catholic printers.

The elections of officers gave the following results:—

President, P. Beaulé, Quebec, P.Q.; 1st Vice-President, A. Morin, Hull, P.Q.; 2nd Vice-President, J. G. Bolduc, Three Rivers; General Secretary, F. Laroche, Quebec, P.Q.; Treasurer, J. Comeau, Lachine, P.Q.

The meeting place for the next convention is left with the Executive Board, Sherbrooke being suggested.

International Typographical Union

The Seventieth Convention of the International Typographical Union was held at Kalamazoo, Michigan, on August 10 to 15.

The *per capita* tax was collected upon an average of 70,372 members during the year, an increase by 1,428 over the previous twelve months. There was also a net increase of nine in the number of local unions. The receipts for the year totalled \$2,626,459, and the expenditures were \$2,696,655. Of the total expense of the year 82.5 per cent was for mortuary benefits, old age pensions, strike benefits and reconstruction work, and the maintenance of the Union Printers' Home. The same benefits represented a little more than 84 per cent of the total receipts for the year. Expenditures for strike benefits, reconstruction work, travelling expenses of officers and representatives and of committees amounted to \$818,917. Mortuary fund expenditures were \$373,302, while those from the pension fund amounted to \$923,743.

Arbitration.—President James M. Lynch intimated that the Executive Council of the Union had been in conference with the president of the American Newspaper Publishers' Association (whose president attended the convention as a guest) with a view to reaching an arbitration agreement, a draft of which would soon be submitted to a vote of the members.

The convention approved of the recent establishment of a Bureau of Arbitration in the office of the president under the supervision of the first vice-president. This bureau provides representatives to take charge of and present a case before a local board of arbitration on the request of a local union. It was stated that while no arbitration agreement now exists between the International Typographical Union and the American Newspaper Publishers' Association, more than 150 local unions have voluntarily accepted the arbitration

method of adjusting differences with employers that cannot be solved by arbitration. The publishers, it was stated, often employ trained secretaries to present their case before boards of arbitration.

Allied Printing Trades.—The convention resolved to continue the joint effort of the five international printing trade unions to secure greater solidarity. "Without in any way encroaching on the jurisdictional rights of any one of the international unions, it appears that there may be joint effort that will be productive of most acceptable results. Without a so-called industrial union along lines that have been, in our opinion, mistakenly advocated by those with small experience and minimum vision, we have in the International Allied Printing Trades Association a medium through which the general good and the common interest may be promoted."

Old Age Pensions.—The convention sanctioned several important changes in the pension law of the Union. It was found that the existing plan, under which the minimum age limit was fixed at 60 years, was not financially sound. The convention agreed that the remedy lay, not in increasing the assessment or in decreasing the pensions, but in otherwise readjusting the plan to changed conditions in the light of the experience in the working of the fund that has been gained since its initiation in 1907. Accordingly the following proposals were adopted:

(1) To advance the age limit by 1930 to 65 years.

(2) To graduate this requirement a year at a time until the limit is reached.

(3) To require twenty-five years' continuous membership instead of twenty years.

(4) To pay the pension after January 1, 1926, only in case of total disability for work at the trade or inability to secure sustaining employment in other lines.

(5) By resolution directed to future conventions, to halt all further changes in the system for five years to ascertain the full effect of the preceding legislation.

Under the former system the applicant for a pension must have attained the age of 60 years, must have been in continuous good standing for 20 years, and must find it impossible to secure sustaining employment.

Apprenticeship.—The Committee on Apprentices and Supplemental Education made the following recommendation, which was unanimously adopted by the convention: "The International Typographical Union looks with concern on the more than two thousand classes throughout the country which are teaching printing, and should empower the committee on apprentices and supplemental education to

investigate and take such steps as it deems wise to see that the teachers in these schools, as well as the instruction, comes up to the high grade and educational standard set by this organization. The bureau should be authorized to proceed with the preparation of a course of teacher-training instruction which will qualify such of our members as care to avail themselves of the opportunity of filling these teaching positions and meet the educational requirements of the various states in the vocational and industrial arts fields. This work rightly falls within the province of our organization, and it is incumbent upon us to provide practical printers from our ranks at the earliest possible moment to teach this subject, or we shall find schools falling back upon the only other available source of supply—the colleges—to meet their teaching needs. Already many of the best teaching positions in school printing departments are in the hands of men who possess little knowledge of the trade, but who do hold a teacher's certificate."

The enrolment and registering of apprentices, formerly in charge of the secretary-treasurer's office, was transferred to the Apprentice Committee. The union's Bureau of Education has taken a census of boys of all ages in the industry. Examinations will henceforth be annual instead of semi-annual. Local unions failing to appoint a committee on apprentices are subject to a fine of \$25.

Union Labour Insurance Company.—The convention adopted a resolution favouring the establishment of a system of group insurance under trade union auspices. The International Typographical Union, which was one of the first labour organizations to adopt a mortuary benefit system, agreed to participate in the project recently undertaken by the American Federation of Labour to create a stock company, capitalized at \$500,000, having as shareholders labour unions and members of unions, thus offering to wage earners and their families, "through the elimination of the extravagance and enormous overhead expenses that characterize most of the old line insurance societies, all forms of policies at a lower rate and carrying higher benefits than are now available."

Canadian Matters.—The convention adopted the recommendations of the committee on the delegate to the Trades and Labour Congress of Canada, that the Government of Canada should be asked to provide pensions for citizens 65 years of age and over who have concluded not less than 20 years of citizenship; and also to establish unemployment insurance for workers deprived by industrial depression of opportunity of earning a living. The convention further asked that the Dominion Government should reinstate, with priority, all

employees of the Post Office Department dismissed or reduced for having taken part in the late strike of postal workers.

The next convention will be held at Colorado Springs, commencing on the second Monday in September, 1926.

Canadian Brotherhood of Railroad Employees

The thirteenth regular and third biennial convention of the Grand Division of the Canadian Brotherhood of Railroad Employees was held at Toronto from September 21 to 28, President A. R. Mosher in the chair.

The secretary-treasurer reported that for the two-year period ending July 31, 1925, twenty new local divisions had been established, thirteen divisions were re-organized, five divisions were amalgamated with existing divisions, and twenty-two charters were cancelled. There were 159 local divisions in good standing at the time of reporting, a net gain of six divisions over the previous two-year period. With 4,484 new initiations and 1,712 re-instate-ments, set against losses by deaths, resignations from the services and members dropped, there was a net gain in membership of close to 500. The total enrollment was 13,829 members.

The Brotherhood set itself firmly against suggestions of interference in the public ownership and management of the Canadian National Railways and unanimously approved a resolution that in the coming federal elections members support only such candidates that pledge themselves to public ownership and no political interference.

Strengthening the bonds of unity between trade unionists of all nations was considered by the convention to be the only sure safeguard against future imperialistic wars, and the Brotherhood will endeavour to do its share in this work. Among other steps, a delegate will be sent to the next conference of the International Transport Workers' Federation. President Mosher was chosen for this duty.

Amalgamation of all railway labour organizations into a composite industrial form of union was re-endorsed, along with a proposal from London Division No. 96 that amalgamation committees be set up in local centres where representatives of the various organizations might work together on matters of common interest, and thus pave the way to greater unity.

The executive committee was instructed to ask the Minister of Labour to augment the statistical information given out from time to time by the Department of Labour.

Improvements will be sought in legislation with respect to mothers' pensions, public health and child welfare. The executive will formulate a suggested scheme of old age pensions for members of the Brotherhood and submit it to local divisions for discussion.

The Dominion Government will be asked to appoint a representative of the Brotherhood on the executive of the Canadian National Railways. The Brotherhood is committed to protection of individual members who, in event of a strike, are subject to injunctions on account of picketing.

The reports of the president, secretary-treasurer and other officers showed that the organization had made a substantial increase in membership and the number of local divisions. Financially, the reports revealed a sound condition. The official journal made a strong contribution to the funds and influence of the Brotherhood during the two-year period.

Several important amendments to the constitution and general rules were effected, principal among which is provision for the establishment of Systems Committees for joint negotiation where there are two or more General Grievance Committees on any one railway system. The Grand Executive Board membership is reduced to five, the offices of the three regional vice-presidents being superseded by two executive members. Proxy votes at Grand Division meetings are dispensed with as a result of another amendment.

The President's Address.—President Mosher reviewed the various conferences in which he had participated during the past two years, mentioning particularly the numerous meetings with officers of the Canadian National Railways. He stated that the Brotherhood's representative, in connection with the amalgamation of schedules on the various lines on the present Canadian National Railways had succeeded in securing increases for most employees. So far as he was aware, the Canadian Brotherhood of Railroad Employees was the only railway labour organization during the past two years to accomplish anything by way of wage increases. The formation of a Board of Adjustment of the Canadian National Railways was announced in the presidential address. (This subject is dealt with on another page of this issue.) For some months negotiations have been under way for the establishment of this board to deal with grievances not otherwise adjustable between the officers of the Brotherhood and of the company. The Board will be comprised of

four representatives of the company and four representatives of the Brotherhood, the chairman to be chosen alternately from each group and to hold office for six months at a time. As the agreement was signed just before the convention, the Board had not actually been put into functioning order.

Efforts towards the promotion of amalgamation of all railway labour organizations were reviewed and, while little progress was reported, the president considered that the ground work of unity had been started and that eventually a complete merger would take place.

In regard to the proposed union insurance scheme the president suggested that the scheme should be a voluntary one, and that those who desired insurance should organize a co-operative insurance society. A series of cost of living studies is being carried out, which would supply the members with first-hand information, surveys being made in different towns throughout the Dominion.

The president announced the affiliation of the Canadian Brotherhood of Railroad Employees with the International Transport Workers' Federation. He stated that the Federation now had a membership well over 2,000,000 of which more than 54 per cent were railroad workers.

Mention was made of a reciprocal arrangement with the Brotherhood of Maintenance of Way Employees whereby each organization agreed to discontinue activity amongst employees represented by the others. President Mosher declared that this gave an indication of the many uses and advantages of a unified railwaymen's organization.

Dealing with the proposal to amalgamate the Canadian National Railways and the Canadian Pacific Railways, he declared that if such amalgamation was necessary in the interests of economy, the only satisfactory method would be for the Government to take over the Canadian Pacific Railway and assume the responsibility of taking proper care of the workers who would be affected by this action.

The increasing competition of motor-driven transports, both in passenger and freight, brought from President Mosher the suggestion that there should be a freight tariff and special levies for road upkeep upon these competitors of the railroad. By working long hours and by cutting rates motor trucks were affecting the business of the railways to a considerable extent and thus, indirectly the welfare of railway workers. Consequently President Mosher considered that they should be placed on at least an equivalent basis with the railways.

In regard to wage rates the president emphasized the value of public opinion in seeking the betterment of wages and working conditions and proposed in all instances the public should be taken into the confidence of the workers and given specific reasons why such increases were vitally necessary. A consistent and persistent campaign of publicity based on facts he thought would be of great value. He advocated the extension of the Brotherhood's facilities for the gathering, condensing and publishing of facts regarding railway operation, wages, working conditions and living costs and other economic social methods. Government statistics were of little use without further elucidation and oftentimes the statistics were deceptive because of their incompleteness.

The president recommended the formation of study groups in connection with local divisions as it would advance the dissemination of knowledge on economic and social questions. He commented on the lack of provision by the Federal Government for research in the social economic field, while considerable sums of money were expended yearly in research for the benefit and profit of Canadian industry. The only information gathered by the Government on economic conditions was done by the Labour Department and Department of Trade and Commerce. "Cost of food supplies, rent, fuel and lighting is as far as the Department of Labour goes in social research. The work is done in an unsystematized manner, with no philosophy attached to it, and no objective in view." It was necessary, therefore, for Labour Organizations to fortify their positions by the coalition of accurate information. The Labour Organizations in Great Britain had undertaken this work with considerable success.

The president recommended that consideration be given to the question of establishing Consumers Co-operative Societies among the Brotherhood members in order to assist in overcoming the excessive costs of many commodities.

The convention concurred in the various recommendations contained in the president's report.

Workmen's Compensation.—The Executive Committee was instructed to investigate the assessment of two cents per day collected from employees on the former Grand Trunk Railway lines against accidents in relation to the provision of the Ontario Workmen's Compensation Act which prohibits employers retaining or receiving money from employees for this purpose, the Executive to endeavour to have this collection discontinued.

Other Resolutions.—Other resolutions concurred in committed the Brotherhood to working for the extension of international trade unionism as a bulwark against another imperialistic world war; non-contributory State Unemployment Insurance, with an interim arrangement of maintenance for those unable to find work; condemned the practice of the Canadian Government in excluding from Canadian naturalization persons actively engaged in the labour movement, and persons who have opposed oppression in their native lands; representations to the management of the Canadian National Railway pension fund to equalize amounts paid by employees, upon the inception of the proposed new superannuation scheme.

The incoming executive was instructed to consider some form of old age pensions for members of the Brotherhood.

Some amendments to the constitution were approved, providing for the issue of charters to district councils; defining the composition of the Grand Division and Grand Executive Board and specifying the qualifications of delegates to the former; defining the powers of the president in regard to complaints against officers and members.

The election of officers resulted as follows:—

President, A. R. Mosher, Ottawa.

Vice-president, Murdoch McLeod, Charlottetown.

Secretary-treasurer and Editor and Manager of the Official Journal, M. M. Maclean, Ottawa.

Other Executive Board Members, C. H. Minchin, Calgary, and William Allen, Halifax.

Board of Trustees, T. MacGregor, Winnipeg (Chairman); R. A. Dumais, Montreal (secretary), and W. E. Riche, Toronto.

The biennial convention in 1927 will be held at Montreal.

Brotherhood of Locomotive Firemen and Enginemen

The Canadian Legislative Board of the Brotherhood of Locomotive Firemen and Enginemen held their eighth regular meeting at Ottawa during August and September, 1924. Canadian lodges of the Brotherhood being represented. Addresses were given by the Prime Minister, the leader of the Opposition and the Mayor of Ottawa, as well as by the President of the Trades and Labour Congress of Canada and other labour representatives. Among other important resolutions the Board recorded "regret and indignation at the apparent indifference and apathy shown by the Governments of Canada, Federal and Provincial, since 1919, to the importance of a more

practical recognition of Conventions and Recommendations passed by the International Labour Conference, and the enactment of legislation in harmony therewith."

On the subject of immigration the Board suggested that a conference should be held between the Federal and Provincial Governments for the purpose of arriving at an "intelligent, courageous and persistent immigration and colonization policy," including such features as agricultural education in schools, government responsibility for emigrants for one year, long term credit for settlers, etc.

Other resolutions proposed the equipment of all large locomotives with mechanical stokers, also all locomotives with automatic firebox doors; deplored the action of the Railway Commission in dismissing the application of the enginemen for an order to restrict excessive hours of service as a safety measure for employees and the travelling public, and further alleged laxity on the part of the Board in allowing railway companies to disregard certain orders of the Board, especially the Operating Rules regarding the method of train protection; the equipment of yard engines with electric lights; competent men to be employed in the operation of snow ploughs; restrictions against running light engines without a conductor, and the abolition of all level crossings of railway with highway.

Officers for the ensuing three years' term were elected as follows:—

W. L. Best, Chairman and National Legislative Representative, Ottawa, Ontario.

James Pratt, Secretary-treasurer, Toronto.

Vice-chairmen,—T. L. Bloomer, British Columbia; Geo. Wm. Yeats, Alberta; D. C. Little, Saskatchewan; F. W. Nicks, Manitoba; H. B. Crawford, Ontario; C. Masse, Quebec; F. W. Henderson, New Brunswick; John R. Stewart, Nova Scotia; J. A. Hickey, Prince Edward Island.

Board of Directors,—W. G. Graham, chairman, Lindsay, Ontario; J. J. Southern, secretary, Port Arthur, Ontario; H. J. Wark, Sherbrooke, Quebec.

Glass Bottle Blowers' Association

The forty-ninth annual convention of the Glass Bottle Blowers' Association was held at Baltimore, Maryland, in July. This organization has four local unions in Canada.

President James Maloney referred in his opening address to the prospects of the industry. "Glass containers," he said, "are being used for purposes never dreamed of a few years ago. They are the most sanitary holders of fluids and food on the market. In the natural order of things greater numbers of bottles will be used by the consuming

public. The automatic department is yet in its infancy. If we exercise patience and use good judgment in our relations with employers, and goodwill and co-operation with each other, we can look forward with the hope that in the not distant future our membership will be increased materially and the prestige and influence of our association greatly augmented."

Labour and Machinery.—The president criticised some employers who displace old employees when improvements are introduced. "When new methods of production enter our industry," he stated, "employers are usually fearful of giving the man who has been displaced an opportunity of becoming proficient on the new machine. They seem to feel that it requires a new man, one who has not been active on the foot-bench and accustomed to using the method displaced, fearing, possibly, the glassworker may not honestly endeavour to get the best results possible from the new machine methods. . . . We do not agree," the president continued, "with the oft repeated expression that machinery has proved to be a blessing to mankind. Our experience has been sad indeed. I hope you will not forget that without a vigorous, well-managed organization you have not much to hope for. It will eventually prove our salvation. Wages to-day average only about twenty-five per cent of the price the consumer must pay for the finished article.

"No one can deny that the introduction of machinery has brought about great suffering among thousands who find themselves displaced. Our people have had the bitter experience of finding the trade that took them so many years to acquire losing its value practically over night and making machine-tenders of them. But the trade unionist, in conjunction with the rest of mankind, realizes that we are living in a mechanical age, in which machinery will eventually do more and more of the work of the world, and as an intelligent human being he desires to find employment thereon at good wages. Whatever effect machinery may have in the final analysis on his welfare and on society, there is no question but that the skilled worker in a given industry must bear the great burden during the transition from the hand method of production to the machine, and suffer untold hardships."

Benefits.—Since the inception of the union's death beneficiary fund, it has paid \$1,381,000 to the dependants of the members. Members are now assessed 15 cents in the death beneficiary department.

Volstead Act.—The glass bottle industry has suffered materially through this act, which

eliminated a large number of members of the union formerly employed in making beer bottles. Fully 30 per cent of the bottles formerly made in the various bottle factories were used for beer.

Apprenticeship.—Only 33 apprentices were reported by branches to be in the industry during the past year, and it was decided that no apprentices should be taken in the blown department during the coming year. In this connection the president said: "Scarcely any place that I know of now takes apprentices. It is true in all industries. The boy who wants to learn the trade cannot do as was the practice twenty, thirty and forty years ago—that is, go into a workshop and learn. Trade schools have been established. Machinery has revolutionized former custom. Contractors and other employers will not bother with a learner, but want a skilled, experienced hand who can produce. I know of one plant where no apprentices have been taken during the last five years. We must meet this problem as best we can, and it is serious. Young men are coming from the flow and feed plants and the road should be open for them to come in and replenish the ranks of the older men. But the door is closed in the blown ware plants. The subject requires very thoughtful attention."

It was decided that future conventions will be held biennially instead of annually. Officers for the next two years will be as follows:—president, James Maloney; vice-president, W. W. Campbell; secretary, Harry Jenkins; treasurer, Harry Halton.

International Typographical Union Motion Picture

The International Typographical Union has just announced the release of a three-reel picture, illustrating the socially beneficial activities of that organization, including the Union Printers' Home, old age pension, mortuary benefit, health campaign and apprentice training department.

"His Brother's Keeper" is the title of the picture and a contrast is drawn between the lot of the down and out worker a few decades ago and that of a union printer of to-day who may be incapacitated for work by ill-health or old age.

The purpose of the picture, according to James M. Lynch, president of the Union, is to acquaint the public with the less militant phases of trade union character.

General German Trade Union Federation

The 12th Congress of the General German Trade Union Federation, held recently at

Breslau, discussed the question of industrial unionism, and resolved that "no trade union shall formulate demands for itself independently without first endeavouring to come to an agreement with the other unions involved." The convention believed in the necessity for ultimate organization on the industrial basis, but recognized that this goal could not be reached immediately. Meanwhile, in view of the fact that in certain industries some of the unions have suffered serious prejudice in wage sections owing to independent action being taken by other unions in the industry, regulations restoring the previous mutual agreement system have been made to carry the unions over the transition stage. The congress called for the formation of a uniform and genuinely social labour code, and particularly for legislation regulating labour and wage agreements, and unifying social insurance. Finally, it protested against obstacles now being placed by the Arbitration Courts on the right of combination, and demanded that strikes be allowed to take place without hindrance.

The Congress noted with approval that the trade unions have succeeded in obtaining the 8-hour day for at least half the workers in Germany. The government was asked to pass a law regulating working hours and enforcing the 8-hour day in all industry. In regard to wages it was stated that most of the wage earners in Germany now received wages below the pre-war rates, and unions were urged to continue their fight for higher wages.

Norwegian Trade Union Congress

The Norwegian Trade Union Congress, at their annual meeting at Oslo in August expressed its approval of the work of the Anglo-Russian unity committee and declared itself ready to support its efforts. The executive was instructed to combine with this committee, and to send delegates if an international trade union congress or conference should be called. This resolution was a compromise, as both the socialists and the left-wing communists voted for it.

Until this year the federation had always declined to appoint a representative to the International Labour Conferences in Geneva. This year, however, there was a departure from this precedent, the executive having appointed a representative, who did actually take part in the conference. This action called forth a long discussion as to the relations of the Federation to the International Labour Office. In the end, it was decided by 147 votes to 76 to break off all connection with the International Labour Office.

BRITISH TRADES UNION CONGRESS

THE fifty-seventh annual Trades Union Congress was held at Scarborough on the 7th September and the five following days. The President was Mr. A. B. Swales, Chairman of the General Council.

The number of delegates appointed to attend the Congress, as shown in the Statistical Statement compiled by the General Council, was 726; the number of organizations paying affiliation fees to the Congress (including a few organizations, with a membership of about 13,000, who paid such fees but did not appoint delegates) was 172, with a membership of approximately 4,343,000. In the following Table these figures are analysed by groups of unions (the classification adopted being that used by this Department for its annual statistics of membership of Trade Unions), and corresponding figures are given for 1924.

The following figures for the membership in 1925 show little general change compared with those for 1924, the principal changes being an increase of about 50,000 members in the mining group and a decrease of about 50,000 members in the engineering and ship-building group:—

Agriculture, 30,000; mining and quarrying, 840,543; metal, engineering and shipbuilding, 623,132; textile, 403,171; clothing, 160,447; woodworking and furnishing, 80,569; paper, printing, etc., 167,665; building, decorating, etc., 295,380; railway service, 454,924 other transport, 388,126; commerce and finance, 166,297; public administration, 154,045; miscellaneous, 78,259; general labour including general unions of enginemens, etc., 500,424; total membership, 4,342,982.

Powers of General Council.—The principal discussion on the second day of the Congress was a resolution in favour of extending the powers of the General Council. The resolution proposed to empower the General Council to levy all affiliated members; to call for a stoppage of work by an affiliated organization or part thereof in support of a Trade Union which was defending "a vital trade union principle"; to arrange with the Co-operative Wholesale Society to make provision for the distribution of food, etc., in the event of a strike or otherwise; and called on all organizations to make such alterations to rules as would regularize the above position. An amendment was moved deprecating any interference with the right of affiliated societies to secure alterations of working conditions, or the substitution of the principle of the general strike for the present method of each industry proceeding in the way best suited to its own needs and possibilities.

In the discussion on the resolution and amendment, several delegates commented on the fact that the General Council themselves were not asking for this extension of their powers, the resolution having been moved by one of the affiliated unions on its own responsibility; the opinion was also expressed that the affiliated unions had not had sufficient opportunity to consider the terms of the resolution, and that the General Council already had all the powers they needed under the present constitution. The Congress ultimately agreed to a recommendation of the General Purposes Committee that the resolution and the amendment should be referred to the General Council, with instructions to examine the problem in all its bearings, with power to consult the executives of the affiliated unions, and to report to a special conference of the executives concerned their considered recommendations on the subject.

Unemployment.—Two resolutions were passed on the subject of unemployment. The first was a long composite resolution, which, among other things, called on the Government to introduce immediately an amending Act to provide for the payment of continuous benefit to unemployed workers, without reference to standard or extended benefit, and suggested that Trade Unions should be empowered to administer the Unemployment Insurance Acts on behalf of their members, and in every way to act for their members as if they were Employment Exchanges. The second asserted the right of the unemployed worker and his dependants to adequate maintenance, and demanded the establishment of a National Employment and Development Board, for the purpose of devising and co-ordinating measures whereby the extent of unemployment might be reduced.

Resolutions in favour of the admission to affiliation of the National Unemployed Workers' Committee Movement, and of Trades Councils, were ruled out of order.

A resolution was passed recommending that all Trade Unions should accept women into membership on the same terms as men, where women are employed in the same industry, trade, or service; that inside the Unions they should be accorded equal privileges and responsibilities; and that the Unions should seek to secure equal pay for similar duties.

Another resolution called for the abolition of sex differentiation in rates of remuneration and other conditions of service in the Civil Service.

Proposed One Big Union.—The principal debate on the third day of the Congress took

place on a resolution in favour of a reduction in the number of Trade Unions to a minimum, by the continued amalgamation of existing Unions, with one Big Union as the ultimate goal. An amendment was moved favouring the policy of consolidation, but deprecating the merging of all affiliated bodies in one big Union. After considerable discussion the amendment was defeated, on a card vote, by 2,073,000 votes to 1,667,000; the resolution was then put to the vote and was also defeated, by 2,133,000 votes to 1,787,000.

Another resolution, which was carried by a large majority (2,456,000 votes to 1,218,000) declared that the Trade Union movement must organize to prepare the Trade Unions, in conjunction with the party of the workers, to struggle for the overthrow of capitalism; condemned all attempts to introduce capitalist schemes of co-partnership; and urged the formation of strong, well-organized workshop committees.

A resolution was carried condemning the organization of administrative staffs on "third party" lines—i.e., in a presumed middle or neutral position between employers and labour.

International Union.—On the fourth day of the Congress addresses were given by the fraternal delegates from the United States, Canada, Russia, and Mexico, and by a representative of the International Federation of Trade Unions. Mr. Bramley, the Secretary of the General Council, also addressed the Congress on the subject of international unity, with special reference to the Report of the delegation from the General Council which had recently visited Russia; and a resolution was passed recording appreciation of the General Council's efforts to promote international unity, and urging the incoming General Council to do everything in its power towards securing world-wide unity of the Trade Union movement, through an all-inclusive International Federation of Trade Unions.

Other resolutions passed on this day condemned the working conditions in factories in China, and instructed the General Council to send delegates to India, China, and Egypt to investigate the conditions of labour therein.

On the fifth day of the Congress a resolution was passed unanimously condemning the decision of the Government to close the dock-yards at Pembroke and Rosyth.

A resolution was moved in favour of giving to national agreements, voluntarily entered into and approved by Joint Industrial Councils, the same validity as awards under the Trade Boards Acts. After a discussion, in which some delegates expressed the fear that

the adoption of the resolution might open the door to compulsory arbitration, to which they were strongly opposed, the resolution was ultimately passed by 2,799,000 votes to 900,000. [At last year's Congress a similar proposal was not voted upon, the previous question being carried.]

A resolution was passed calling upon the Government to ratify the Washington 48-hour Convention and instructing the General Council to press for international ratification.

Land Policy.—The sixth and final day of Congress was occupied, under a time limit of three minutes' speeches, in passing resolutions on land cultivation, rural housing, and Imperialism.

On the first of these, Congress called upon the Government "to require from the county agricultural committees returns of all uncultivated and under-cultivated land, and to give the Committees wide power of control and compulsory acquisition of such land." On housing it declared "that the Government should bring special pressure to bear on local authorities in agricultural areas to expedite the building of houses which could be let to farm workers."

A long resolution on our relations with the Dominions and Colonies of the British Empire, was carried by 3,082,000 against 79,000.

Among numerous other subjects discussed during the week, usually in connection with resolutions, were:—the organization of agricultural workers, of laundry workers, and of theatrical employees; the Dawes scheme of reparations; the extension of the Trade Facilities Act to Russia; the codification of the Workmen's Compensation Acts, with certain improvements; the abolition of home-working and out-working in the clothing industry; access of Trade Union officials to lists of out-workers; the political rights of Civil Servants; the position of the *Daily Herald* newspaper; the wages and conditions of labour under which "Weir" houses should be erected; driving licences; the Army Reserve Forces Act; and the Regulation of Offices Bill.

An organization has been formed at Montreal, under the title of the British Immigration and Colonization Association, for the purpose of helping boys and girls from Great Britain to find employment and homes in places suitable to their capacities.

Three harvesters were found guilty by a magistrate in Saskatchewan in September of refusing to obey the orders of their employer and carry on harvesting work, and were fined \$5 each, with costs.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANISATION

Recent Ratifications of Draft Conventions

THE number of ratifications of International Labour Conventions registered by the Secretary-General of the League of Nations has recently been notably increased. In the last few weeks a ratification by Australia (the first by that State), and two ratifications by France have been announced. These are now followed by the ratification by Chile of eight Conventions, including the Hours Convention, and by the ratification of five Conventions by the Irish Free State.

The Chilian ratifications, the first by any of the states of Latin America, may be regarded as a happy omen for the fruitfulness of the visit of the Director of the International Labour Office to South America; the instruments of ratification were handed to the Director, for communication to the Secretary-General of the League, by the Minister of Labour, in the course of a solemn ceremony at Valparaiso.

The new ratifications by the Irish Free State fulfil the promise held out by the Government delegate from that state at the last session of the International Labour Conference. Though the Irish Free State did not become a member of the International Labour Organization until two years ago, it has now ratified eight of the Conventions adopted by the Conference.

These sixteen ratifications represent not only a substantial addition to the total volume of formal adhesions to the Conventions, but also an appreciable broadening of the field covered by such adhesions. Including Australia and Chile, there are now twenty-six countries which, by the act of ratification, have undertaken to observe the provisions of one or more of the Conventions of the International Labour Conference.

The recent action in Canada in regard to the ratification of the Seamen's Convention is described in an article on another page of this issue.

Governing Body of the International Labour Office

Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, was authorized to attend the 29th Session of the Governing Body of the International Labour Office, which assembles in Geneva on October 15, as a substitute for the Honourable James Murdock, Minister of Labour, who is the Canadian Government representative on this body.

Mr. Tom Moore, President of the Trades

and Labour Congress of Canada, who was chosen this year as one of the six workers' representatives on the Governing Body, will also be in attendance at this meeting. Mr. Moore left Ottawa on October 1 for this purpose.

The Agenda of the meeting will include consideration of the subjects to be dealt with at the 10th Session of the International Labour Conference to be held in 1927.

International Economic Conference

The League of Nations Assembly on September 24 adopted a proposal emanating from the representatives of France for an international economic conference to discuss "the economic differences standing in the way of general prosperity, and the best methods of surmounting these difficulties and of avoiding disputes." A committee of the Council of the League of Nations is to prepare the agenda of the conference with the help of the International Labour Office. The Conference will probably be held in October, 1926, following the seventh Assembly. Reports from Geneva state that there was a profound belief among the delegates that economic security is necessary for a permanent peace. M. Jouhaux, the French Labour leader, declared that the economic situation throughout the world was grave, and should not be concealed from the people. He stated that the questions of raw materials, immigration, and international debts would be excluded from the agenda. The United States will be invited to participate in the Conference. It is hoped that the economic conference will be a sequel in world reconstruction to the financial conference held at Brussels in 1920, which laid down principles for international financial adjustment, provided a basis for the reconstruction of Austria and Hungary and prepared the way for a settlement of reparation of war debts.

Hours of Labour in Industry: United States

The International Labour Office has recently added to its series of reports on hours of work a volume dealing with the United States. As in previous reports, an outline is given of hours legislation and of the provisions of collective agreements. A survey is given of the hours actually worked in the chief industries; in some cases the trade union organization or geographical distribution of the industry is briefly described in order to explain the situation. The information given is largely statistical in character, more than a hundred tables being included. The report constitutes a useful work of reference.

INTERNATIONAL CODIFICATION OF THE RULES RELATING TO SEAMEN'S ARTICLES OF AGREEMENT

THE question of the international codification of the rules relating to seamen's articles of agreement, which has been placed on the agenda of the ninth session of the International Labour Conference, to be held in 1926, has been carefully studied by the International Labour Office for several years.

The subject was first raised at the Peace Conference in Paris in 1919, the Commission on Labour Legislation having had its attention drawn to the matter by the International Trade Union Conference in Berne by a resolution containing the following passage: "A special international code shall be laid down as regards the protection of seamen. It shall be drawn up in collaboration with the Seamen's Unions"; also by an appeal signed on behalf of the International Seamen's Union of America by its president, Mr. Andrew Furuseth, for the extension to seamen of all countries of the provisions of the United States law authorising seamen of the mercantile marine to leave their vessels when in port. The discussion of this principle in the Commission raised the general problem of an international seamen's code, and the question of seamen's articles of agreement was thus brought within the range of consideration from an international point of view.

The International Labour Office took the matter up with the Joint Maritime Commission, an advisory committee constituted for the purpose of assisting in the study of maritime questions and consisting of representatives of shipowners and seamen appointed by the delegates of these groups who were in attendance at the second session of the International Labour Conference in Genoa, Italy, in 1920. After obtaining expressions of opinion from the various states members of the International Labour Organization, as well as of the principal shipowners' and seamen's organizations, a codification in accordance with the indications originally given by the Commission was drafted. This draft was prepared after exhaustive examination of the different maritime laws, and was based to a large extent on the provisions in force in the different countries. It represented an endeavour to improve the present position to a certain extent and to provide, on the basis of the most advanced legislation, a solution of some of the problems arising in connection with articles of agreement.

A few days before the opening of the fifth session of the Joint Maritime Commission in 1925, the Office received from the representa-

tives of the shipowners a letter stating that the proposed draft seemed unacceptable, since its adoption would be sure to involve changes in the legislation of the various countries, and concluding with the opinion that "codification of international law should not aim at anything more than laying down in principle what is universally adopted." In accordance with this conception of what the code should be, the representatives of the shipowners submitted what amounted to a counter-draft to replace the draft of the Office, laying down merely a certain number of "rules" of a very general character and leaving a great number of points to be dealt with by national legislation.

A general discussion of the chief features of the two drafts occurred at the fifth session of the Joint Maritime Commission, and on the motion of the shipowners' representatives, a resolution was adopted proposing that a sub-committee be formed for the purpose of drafting rules on the basis of the "adoption of principles which at present are generally recognized." The Sub-Committee of the Joint Maritime Commission thus formed made an exhaustive comparison of the two drafts submitted to it. Finally it drew up a new draft which, with certain exceptions, contained only provisions generally recognized in national legislation. At the same time the draft contained a number of provisions defining internationally the measures to be taken for the enforcement of the principles laid down.

This third draft was communicated by the Office to all members of the Commission, and all the representatives of the shipowners intimated that they were in agreement with it; but all the representatives of the seamen who were not present at the meetings of the Sub-Committee have informed the Office that they do not accept the draft prepared by that committee. Therefore it was impossible for the Office to communicate it to the Governments as representing an actual compromise between the view of the two groups on the Joint Maritime Commission, and in forwarding a questionnaire on the subject to the Governments, as is usual, it was felt that the three successive drafts which have been prepared should be communicated.

The Questionnaire now before the various Governments deals with the subject of *international codification of the rules relating to seamen's articles of agreement* under the following headings:—

I. General principles:

1. Subject-matter, character and form of the codification of rules relating to seamen's articles of agreement.

2. Scope of the proposed international rules relating to seamen's articles of agreement.

II. Qualifications required for engagement as seaman or officer.

1. Physical qualifications.

2. Professional qualifications.

(a) Rules applying to all members of the crew.

(b) Professional qualifications of officers.

III. Entering into and record of articles of agreement.

1. Nature and conditions of validity of seamen's articles of agreement.

2. The various kinds of articles of agreement, and the obligatory clauses.

3. Proof of the engagement and of the rights and duties of the seaman.

*IV. Rules governing the termination of articles of agreement.**V. Repatriation.**VI. Disciplinary and criminal penalties for the enforcement of seamen's articles of agreement.*

1. General principles.

2. Enforcement of the rules governing engagement and discharge.

3. Punishment of offences committed by a seaman in respect of the fulfilment of the agreement.

4. Prosecution and punishment of offences.

METHODS OF STATISTICS ON UNEMPLOYMENT

Under the above title the International Labour Office prepared and issued some months ago bulletin No. 7, Series N (Statistics), which was a report for the Second International Conference of Labour Statisticians held in Geneva in April, 1925. It was intended that this bulletin should provide a basis on which the Conference might draft recommendations to the statistical agencies of the various countries represented, with a view to having complete and uniform statistics on the problem of unemployment that might be internationally comparable for use throughout the world. The bulletin outlines the chief sources and classes of unemployment statistics in general, together with a short description of the statistics on the question which are regularly collected and published by each of the chief countries of the world. In this way the publication becomes of more than passing importance and is very useful as a reference work for the source of world unemployment statistics, as well as a repository of information about the different methods which are now utilized. The descriptions of methods range over the fields of unemployment insurance figures, trade union estimates, employment exchange figures, statistics gathered in connection with state relief of the unemployed, statistics of employment in industry, and census figures. The conclusion which the International Labour Office has arrived at as a result of its study is that statistical information derived from the workings of insurance against unemployment provides the best indication of the extent of involuntary industrial idleness, but that such statis-

tics as trade union figures, employment exchange figures, etc., should not be disregarded but should be carefully compiled even in countries where the more comprehensive figures provided by unemployment insurance are available.

It is interesting to consider briefly the conclusions arrived at in the bulletin as to the comparative value of the different classes of statistics. Figures secured in connection with the working of an unemployment insurance scheme should not be regarded too highly from a statistical point of view, when the large number of countries where no unemployment insurance scheme is in effect are taken into account. Statistics secured through unemployment insurance cannot be divorced from unemployment insurance itself. The two things are complementary, for in order to have an actuarially sound system of unemployment insurance, accurate unemployment statistics must be available. The operation of an unemployment insurance scheme, however, provides a more comprehensive system of unemployment statistics than does any other source. Yet it is not true to say that even in Great Britain, where unemployment insurance has been developed to a greater extent than in any other country, unemployment statistics from that source are all-inclusive. There is still the element of doubt as to whether the facts as disclosed by the statistics secured can also be applied to those industries and occupations which are not covered by the scheme.

In regard to existing statistics covering unemployment among members of trade unions,

the bulletin invariably refers to these figures as "estimates." Now, in the case of Canada, at any rate, this is not quite true. In the figures dealing with unemployment among members of trade unions in Canada, which are published monthly in the *LABOUR GAZETTE*, only actual reports received from trade unions are utilized in the compilation. These returns are secured from the secretaries of trade unions, who in practically all cases have first hand knowledge of the numbers of members

who may be unemployed. The only element of estimate which therefore creeps into the figures is in the few cases where trade union secretaries may have to supply estimates, instead of known numbers, of their members who are out of work. At most this occurs in very few cases and, as such errors would have a tendency to offset each other, the statistics may be taken literally at their face value.

INTERNATIONAL ASSOCIATION OF PUBLIC EMPLOYMENT SERVICES

THE thirteenth annual meeting of the International Association of Public Employment Services was held in Rochester, N.Y., on September 15-17. The delegates in attendance were representative of the Canadian and United States federal as well as the respective provincial and state governments. The opening ceremonies consisted of an invocation and address by Rev. John B. Crowley, superintendent, Catholic Charities, Rochester, and addresses by W. A. Marakle, assistant to the State industrial commissioner; the Hon. Chas. D. Van Zandt, mayor of Rochester, and Chas. J. Boyd, president of the association.

The Hon. James J. Davis, Secretary of Labour of the United States, was prevented at the last moment from attending the conference and sent as his representative the Hon. Theodore G. Risley, solicitor general of the United States Department of Labour. Mr. Risley read the address on industrial relations prepared by Secretary of Labour Davis for the occasion and supplemented the same with a most eloquent and inspirational message of his own.

"What the manufacturers expect from the public employment bureau" was the subject of a paper read by William J. Johnson, Director, Industrial Relations Department, Taylor Instrument Company, Rochester, N.Y. The paper contained evidence of intimate knowledge of the operations of the public employment service and some valuable criticism of its weaknesses. E. A. Roberts, principal of the Continuation School at Rochester, N.Y., contributed an interesting paper on the vocational placement of boys and girls, while the cognate subject of "The young person's choice of work—and why" was discussed by Miss Nelle Swartz, Director, Bureau of Women in Industry, State Department of Labour, New York City. "How the Federal or Dominion Employment Service can Co-operate with the Provincial or State Employ-

ment Service" was the subject dealt with by R. A. Rigg, Director, Employment Service of Canada, Ottawa; while "Uniform forms, reports and procedure for the State or Provincial Employment Service" was discussed by Francis I. Jones, director general, United States Employment Service, Washington, D.C. An instructive address was delivered by the Hon. James A. Hamilton, Industrial Commissioner, State Department of Labour, Albany, N.Y.

General discussion followed the introduction of the various subjects included in the programme and among the resolutions emerging therefrom were the following:—

1. Whereas, the counsel, recommendations and constructive criticism of representatives of employers, workers and others interested in public employment work in attendance at the present meeting of the International Association of Public Employment Services, has been most valuable and constructive; and whereas, we believe that such attendance and active participation should be encouraged; therefore be it resolved that the officers and members of the Association make every effort to promote such attendance and be it further resolved that the programme of future meetings shall be so arranged that at least one session be made of special interest to such representatives.

2. Whereas, it is the sense of this convention that a more concerted and active effort on the part of this Association in matters concerning the continuance and promotion of public employment services throughout the various states of the United States and provinces of Canada would be of great assistance in securing the passage of proper legislation; therefore be it resolved that a committee be appointed by the President of this Association with the Director General of the U.S. Employment Service as Chairman and the President and Secretary of this Association as associate members to act as a legislative com-

mittee and to serve as a clearing house for information pertaining to legislative matters affecting public employment services; that whenever such legislation is proposed by either federal, state, provincial or municipal governments, and in the interim of our conventions, this committee shall decide upon what action is to be taken.

3. Whereas, there seems to be an increasing tendency on the part of employers to use public employment services; and whereas, the paper of William F. Johnson, Director, Industrial Relations Department, Taylor Instrument Co., Rochester, N.Y., brought out the co-operative effort that should exist between employers and members of this Association: therefore be it resolved that the officers and members of the International Association of Public Employment Services endeavour during the ensuing year to build up a better understanding with employers to the end that public employment offices will be used by them in preference to all others.

4. Whereas, the Director General of the United States Employment Service, in his address before the Association has indicated some of the benefits to be derived from a more uniform method of procedure, registration and report to be followed by all public employment services, co-operating with the U.S. Employment Service, and whereas, such uniformity can be accomplished only after the most careful consideration and investigation; therefore be it resolved that before the final adjournment of this meeting the Chairman shall appoint a committee to carefully study the methods now in operation in the various offices in the United States and Canada, and prepare and present a report on this subject at the next meeting of the Association.

5. Whereas, during recent years, great advancement has been made in the school advantages offered the boy and girl who leave school to work; and whereas, one of the methods devised to aid the working boy and girl in gaining more education is found in the continuation or part-time school; and whereas, there has been a tendency in some school systems to make placement work, together with teaching, training and advising, a function of the part-time or continuation school; and whereas, such activities tend to competition in placement work, to duplication of effort, to the spending of public funds twice for one purpose, and to the decentralization of the labour market: be it resolved—first, that this Association heartily approves of the increasing school advantages, offered the working boy and girl; second, that the employment services give their greatest co-

operation to the part-time or continuation schools as institutions of teaching, training and advising in vocational lines to the extent of establishing branches of their juvenile offices in the schools; third, that every effort should be made to have juvenile placement work remain as an activity in the public employment offices on account of the more complete equipment, larger employment field, greater experience in labour problems, full year activities, and trained placement workers found: be it further resolved—that the United States Employment Service and the Public Employment Services of different states and cities insist that the function of junior placement remain with the Public Employment Service, and be it still further resolved that a memorial of these resolutions be sent to the Departments in the Federal, State and Municipal governments, charged with public employment work and public education.

A revision of the constitution was undertaken, resulting in the adoption of the following:—

NAME

1. This association shall be called "The International Association of Public Employment Services."

OBJECT

2. (a) To promote a system or systems of employment exchanges in the United States and Canada.
- (b) To advance the study of employment problems.
- (c) To bring into closer association and to co-ordinate the efforts of Government officials and others engaged or interested in questions relating to employment or unemployment.

MEMBERSHIP

3. All persons connected with federal, state, provincial or municipal departments operating public employment offices shall be eligible to membership in the association. Such other individuals or associations as are engaged or interested in questions relating to employment or unemployment shall be entitled to membership. No person or association operating an employment agency for profit shall be eligible for membership.

OFFICERS

4. The officers of the association shall be the president, the last past president, three vice-presidents, and the secretary-treasurer, elected annually. The executive committee shall consist of the officers, together with five other members elected annually.

MEETINGS

5. Meetings shall be held annually and notice thereof shall be sent to members at least ninety days in advance of said meeting.

AMENDMENTS

6. Amendments to the constitution shall be adopted at any meeting. Proposed amendments shall be submitted in writing and referred to the executive committee.

QUORUM

7. Fifteen members shall constitute a quorum.
8. Robert's Rules of Order shall govern the proceedings of the meetings of this association.

The following officers and members of the Executive Committee were elected:—

President—R. A. Rigg, Director, Employment Branch, Department of Labour, Ottawa.

Past President—Chas. J. Boyd, General Superintendent, Illinois Free Employment Offices, Chicago.

First Vice-President—A. L. Urlick, Commissioner of Labour, Des Moines, Iowa.

Second Vice-President—F. I. Jones, Director General, United States Employment Service, Washington, D.C.

Third Vice-President—Joseph Ainey, General Superintendent, Employment Service of Canada, province of Quebec, Montreal.

Secretary-Treasurer—R. A. Flinn, Chief, Division of Employment, State Department of Labour, New York City.

Executive Committee—

Thos. M. Molloy, Commissioner of Labour and Industries, Regina, Sask.

Otto W. Brach, Chief, Division of Labour, Statistics and Employment, State Industrial Commission, Columbus, Ohio.

Miss Lilla Walter, Superintendent, Women's Division Chicago Free Employment Offices, Chicago, Ill.

E. Koveleski, Director, State Employment Bureau, Rochester, N.Y.

Mrs. M. L. West, Richmond, Va.

An invitation from San Francisco was extended to the Association to hold the next annual meeting in that city, but the Conference decided to leave the matter of time and place of the next Convention to be determined by the Executive Committee.

EMPLOYMENT SERVICE COUNCIL OF CANADA

Seventh Annual Meeting, Ottawa, September, 1925

THE Employment Service Council of Canada, which is constituted under Order-in-Council P.C. 3111, as amended by P.C. 2262, a body composed of representatives of various organizations of workers and employers, railways, organized farmers, returned soldiers, and the Federal and provincial governments, held its seventh annual meeting in the House of Commons, Ottawa, on September 9 and 10, 1925. As the duty of the Council is to advise the Minister of Labour on matters of policy coming within the scope of the Employment Offices' Co-ordination Act, it considered at its seventh annual meeting such matters as were deemed to bear on the proper functioning of the Employment Service of Canada at the present time. At the opening session the Minister of Labour, the Hon. James Murdock, was present and delivered a short address to the members of the Council. In the course of the two days' deliberations, which were presided over by the chairman, Mr. J. T. Foster, certain recommendations were agreed upon, which will be presented to the Minister in due course for his consideration.

The organizations represented at the meeting, together with the names of their representatives, are as follows:—

Trades and Labour Congress of Canada, Messrs. J. T. Foster, Montreal, and James Simpson, Toronto.

Canadian Council of Agriculture, Mr. W. A. Amos, Palmerston, Ont.

Canadian Manufacturers' Association, Mr. E. Blake Robertson, Ottawa.

Railway Association of Canada, Mr. C. P. Riddell, Montreal.

Dominion Veterans' Alliance, Mr. C. Grant MacNeill, Ottawa.

Railway Brotherhoods, Mr. S. N. Berry, Cedar Rapids, Iowa.

Canadian Lumberman's Association, Mr. R. L. Sargent, Ottawa.

Province of British Columbia, Mr. James D. McNiven, Victoria.

Province of Alberta, Mr. Walter Smitten, Edmonton.

Province of Saskatchewan, Mr. G. E. Tomsett, Regina.

Province of Manitoba, Mr. Jas. H. Evans, Winnipeg.

Province of Ontario, Alderman B. J. Miller, Toronto.

Province of Quebec, Mr. Jos. Ainey, Montreal.

Province of New Brunswick, Mr. J. S. Martin, Chatham.

Department of Soldiers' Civil Re-establishment, Major A. M. Wright, Ottawa.

Department of Labour, Miss Jane Barclay, Toronto; Mrs. R. A. Rogers, M.L.A., Winnipeg; and Mr. R. A. Rigg, Ottawa.

The election of officers for the ensuing year resulted in Mr. C. P. Riddell being elected Chairman; Mr. James Simpson, Vice-Chairman; and Mr. R. A. Rigg, Secretary. The two remaining executive positions are filled annually by the appointment of one member each by the Canadian Manufacturers' Association and the Trades and Labour Congress of Canada.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF SEPTEMBER, 1925, AS REPORTED BY EMPLOYERS

EMPLOYMENT at the beginning of September showed a very slightly upward tendency, as contrasted with the downward movement indicated in three of the last four years. Statements tabulated by the Dominion Bureau of Statistics from 5,881 firms showed that they had 793,624 employees, as compared with 793,426 in the preceding month. The index number stood at 96.6, compared with 96.3 on August 1, 1925, and with 93.1, 100.0, 93.7 and 88.7 on September 1, 1924, 1923,

ties were tabulated had 65,778 persons on pay-roll, as compared with 68,408 in the preceding month. Somewhat larger reductions were noted on September 1, 1924, when the index was lower.

Quebec.—There was further expansion in Quebec, where 638 persons were added to the staffs of the 1,261 firms reporting, who had 222,628 employees. Contractions were registered on the same date last year, when the situation was less favourable. Manu-

1922 and 1921, respectively. Improvement in manufacturing and logging was largely offset by contractions in construction. If employment follows the trend usually shown at the same time in previous years, further additions to staffs will be registered at the beginning of October.

The course of employment since 1923 is illustrated in the accompanying chart, which shows the slightly upward movement indicated on the date under review, as well as the downward trend noted on September 1 of 1924 and 1923. It also shows that the situation, although not quite as good as in 1923, is better than at the same time last year.

Employment by Provinces

Additions to staffs were recorded by firms in Quebec, Ontario and British Columbia, while in the Maritime and Prairie Provinces there was curtailment of employment; in the latter case, this was probably due to the exigencies of the harvest.

Maritime Provinces.—Manufacturing (especially of lumber and food products), mining and construction were less active, while gains were shown in iron and steel and transportation. The 522 employers whose statis-

facturing on the whole recorded improvement, the leather, pulp and paper, tobacco and iron and steel industries showing gains that were partly offset by declines in the lumber, textile, electric current and electrical apparatus divisions. Logging, building construction and trade also registered heightened activity at the beginning of September. On the other hand, communication, shipping and stevedoring, highway and railway construction released employees.

Ontario.—Increased employment was noted in most manufacturing groups; the iron and steel industry showed considerable recovery, largely in automobile plants, from the losses recorded on August 1, while substantial additions to staffs were made in canneries and other food factories and in boot, shoe, pulp and paper, textile, electrical appliance and non-ferrous metal works. Sawmilling, however, reported early seasonal losses in employment. On the other hand, gains of a similar character took place in logging camps, and building construction showed further expansion. Transportation, highway and railway construction and trade afforded less employment. Returns were received from 2,683 employers having 326,693 persons on pay-roll,

or 3,729 more than in the preceding month. Important reductions were indicated at the beginning of September, 1924, and index number then was nearly four points lower.

Prairie Provinces.—Seasonal contractions on a smaller scale than in either 1924 or 1923 were recorded in the Prairie Provinces, where the construction departments of the railways, in accordance with their usual practice at harvest time, released large numbers of employees. Manufacturing, especially the railway car shops, was also slacker, as were coal mining and highway construction. On the other hand, trade and local transportation, including grain elevators showed improvement in the employment afforded. A combined working force of 101,864 persons was reported by the 765 firms, who had 104,466 employees at the beginning of August. The situation was better than at the same time of last year.

British Columbia.—Further increases were noted in British Columbia; manufacturing (particularly of canned goods and iron and steel), transportation and construction showed the greatest gains. Fish canneries, on the other hand, reported some seasonal inactivity, and railway construction was also slacker. The working forces of the 652 employers reporting aggregated 76,661 persons, which was 1,063 more than they had in the preceding month. This expansion is in contrast with the decline registered on September 1 of last year, when the index number was some eight points lower. The present figure is the highest on record for British Columbia.

The following table gives index numbers of employment in the five economic areas into which the country is divided in these statistics.

TABLE I.—EMPLOYMENT BY ECONOMIC AREAS
(Number employed by the reporting firms in January, 1920 = 100)

District	Relative Weight	Sept. 1, 1925	August 1, 1925	Sept. 1, 1924	Sept. 1, 1923	Sept. 1, 1922	Sept. 1, 1921
Maritime Provinces.	8.3	88.4	92.2	86.6	101.4	90.3	93.5
Quebec.....	28.0	101.3	101.1	97.8	100.1	91.6	87.4
Ontario.....	41.2	92.7	90.8	88.9	98.1	91.9	83.7
Prairie Provinces.....	12.8	96.0	97.3	93.9	101.1	101.2	98.5
British Columbia.....	9.7	114.2	112.2	106.0	106.6	102.0	95.6
Canada.....	100.0	96.6	96.3	93.1	100.0	93.7	88.7

Employment by Cities

The trend of employment was upward in the eight cities for which separate tabulations are made, although in some cases the gains were insignificant.

Montreal.—Further improvement was shown in this city, 715 persons being added to the

staffs of the 677 firms reporting, who had 109,994 workers. Construction reported the greatest gains, but manufacturing and trade were also more active. Within the manufacturing group, the food, boot, shoe, printing and tobacco divisions, in particular, afforded increased employment. The only large declines were in shipping and stevedoring, although telephone operation showed some curtailment. Pronounced reductions had been indicated on September 1, 1924, when the index number was several points lower.

Quebec.—Firms in Quebec recorded very little change in the situation. Manufacturing, especially of leather goods, was slightly brisker, but trade showed contractions. Statements were received from 89 employers having 8,596 persons on pay-roll.

Toronto.—Manufacturing generally was decidedly more active; the textile trades showed most expansion, but there were also gains in food, lumber and printing establishments. Trade afforded rather less employment. The pay-rolls of the 766 firms making returns aggregated 95,154, as compared with 94,228 persons on August 1. Employment at the same time of last year was in less volume, the increase that took place then being somewhat smaller.

Ottawa.—Conditions in Ottawa were practically unchanged, according to 125 employers having 10,415 workers on the date under review. Manufacturers were slightly busier, but men were laid off by highway contractors. Although curtailment was shown at the beginning of September, 1924, the situation at that time was slightly more favourable.

Hamilton.—There was an increase of 573 in the staffs of 194 firms reporting in Hamilton; they employed 26,260 persons. Iron and steel plants and building construction afforded considerably more employment, while no group showed a large decline. On the same date of last year reductions were indicated, and the index number was between seven and eight points lower than on September 1 of this year.

Windsor.—Complete recovery from the losses registered in the preceding month was reported in Windsor, where automobile plants, in particular, showed marked improvement. Construction was also more active. Returns were received from 78 firms having 9,337 employees, or 2,733 more than in the preceding month.

Winnipeg.—Moderate gains in manufacturing were largely offset by decreases in construction. The working force of the 253 reporting employers included 24,748 workers, as compared with 24,724 at the commencement

of August. More extensive increases were noted on September 1, 1924; the index number then, however, was slightly lower.

Vancouver.—Continued though slight improvement was shown in Vancouver, where construction and transportation absorbed more workers. The 235 establishments making returns had 24,792 employees, while on August 1 they had 24,676 workers. Larger gains were indicated on September 1 of a year ago, but the situation then was less favourable.

The following table gives index numbers of employment by cities. The column headed "relative weight" in this table shows the proportion that the number of employees reported in each of the indicated cities, bears to the total number of employees reported in Canada by the firms making returns on September 1, 1925.

TABLE II—EMPLOYMENT BY CITIES

(Number Employed by the reporting firms in Jan. 1920=100)

City	Relative Weight	Sept. 1, 1925	August 1, 1925	Sept. 1, 1924	Sept. 1, 1923	Sept. 1, 1922
Montreal.....	13.9	97.3	97.0	92.9	93.6	90.5
Quebec.....	1.1	97.4	98.8	96.4
Toronto.....	12.0	88.5	87.7	85.3	89.6	88.3
Ottawa.....	1.3	98.5	100.2	100.6	107.5
Hamilton.....	3.3	86.9	84.8	79.4	92.2
Windsor.....	1.2	85.6	59.0
Winnipeg.....	3.1	88.0	87.7	86.4	89.9	98.9
Vancouver.....	3.1	113.9	111.4	104.0	104.3	102.2

Manufacturing Industries

Employment in manufacturing showed an increase that exceeded the decline recorded at the beginning of August, 4,108 persons being added to the staffs of the 3,820 establishments from which reports were received. They had 439,380 employees on September 1. The largest gains were in iron and steel, (particularly automobile works), canning and other vegetable food, pulp and paper, leather, rubber, musical instrument, tobacco and non-ferrous metal works. The completion of the season's operations in some sawmills and fish canneries caused a decline in employment in some centres; brickyards, electric current plants and oil refineries also reported reductions. Large contractions were noted on September 1, 1924, when the index number was several points lower.

Animal Products, Edible.—Following the considerable activity in fish canneries characteristic of summer, there was a substantial decrease in employment in these establishments at the beginning of September, but improvement in dairies and meat preparing plants partly offset such reductions. The result was a loss of 252 in the staffs of the 191

firms making returns in this group, who had 16,206 employees. The contractions took place chiefly in the Maritime Provinces and British Columbia, while there were gains in the central provinces. The level of employment now is higher than on the first of September of any other year of the record.

Leather Products.—Further expansion was shown in the leather group, tanneries and boot and shoe works registering heightened activity. In spite of the fact that losses were recorded at the beginning of September of last year, employment then was in slightly greater volume. Firms in Quebec and Ontario shared about equally in the additions to staffs noted on the date under review; 189 establishments increased their working forces by 538 persons to 15,439 on September 1.

Lumber and Products.—After seven months of uninterrupted expansion, there was a shrinkage of 859 persons in the staffs of the 729 lumber manufacturers whose returns were tabulated. They had 57,504 employees at the beginning of September. Rough and dressed lumber mills released a considerable number of men, but furniture and wooden vehicle plants reported improvement. The Maritime Provinces, Quebec and Ontario registered reductions, while employment in the Western Provinces remained practically stationary. The situation was more favourable than at the same time last year.

Musical Instruments.—Repeating the movement indicated on September 1, 1924, there was a large increase in employment in this industry, largely in Ontario and Quebec. Statements were tabulated from 40 factories having 2,809 employees, as compared with 2,636 in the preceding month.

Plant Products, Edible.—Continued and important gains were noted in food works, canning, chocolate and confectionery establishments showing the greatest activity. The 309 firms making returns in this division had 29,021 persons in their employ, as against 27,538 on August 1. The larger part of the increase took place in Ontario and British Columbia. Employment on September 1, 1924, had also increased, though on a smaller scale, and the index number then was below its level on September 1.

Pulp and Paper Products.—Improvement was reported in pulp and paper mills and in works producing paper goods, mainly in Quebec and Ontario. This upward movement is considerably more pronounced than that noted on the same date last year, when conditions were not so favourable.

Rubber Products.—The trend of employment in rubber continued to be upward, 130 persons being added to the staffs of the thirty

manufacturers reporting; they had 12,829 workers on September 1. The bulk of the gain was in Quebec. Employment has increased steadily during the last eight months, with the result that the index number is over twenty points higher than at this time last year. It is, moreover, higher than on September 1 of any other year of the record.

Textile Products.—Varying tendencies were indicated in this division; woollen and cordage mills reported less activity, but employment in knitting, carpet and headwear factories was brisker. The result was an increase of 75 persons in the staffs of the 511 manufacturers making returns, who had 67,744 employees. A decline was shown at the beginning of September of a year ago, and the index number then was some eight points lower.

Tobacco, Distilled and Malt Liquors.—There was another increase in employment in this industry, and the index number now is higher than at the same time in previous years of the record. Returns were compiled from 102 employers whose staffs aggregated 12,251 persons, or 147 more than at the beginning of August. The improvement was practically all registered in Quebec.

Clay, Glass and Stone Products.—A further moderate decline was shown in this group, brickyards releasing most employees in Ontario and the Prairie Provinces. Somewhat more marked shrinkage took place on September 1, 1924. Statements were compiled from 117 establishments employing 8,991 persons on the date under review, as compared with 9,142 in the preceding month.

Electric Current.—According to 88 producers of electric current, they reduced their payrolls from 12,958 on August 1 to 12,805 on the date under review. The largest decreases were in Quebec. Although the trend of employment on September 1 of last year was upward, the number of persons employed in this industry at that time was smaller than it is now.

Iron and Steel Products.—Considerable, though by no means complete, recovery from the losses recorded at the beginning of August was noted in this group on the date under review. Rolling mills, automobile, heating appliance, hardware, iron and steel fabrication works, foundries and machine shops afforded more employment, while there was curtailment of operations in agricultural implement and iron pipe factories. The most extensive increases were noted in Ontario, but only in the Prairie Provinces did employment decrease. The working force of the 643 manufacturers whose statistics were tabulated rose from 107,312 persons at the beginning of August to 109,661 on September 1. The index number is several points higher than on that

date in 1924, when very important reductions were noted.

Non-Ferrous Metal Products.—Moderate but general additions to staffs were noted in jewellery works, smelters and refineries and other non-ferrous metal plants. The payroll of the 101 firms making returns aggregated 11,253, as compared with 11,133 in the preceding month. The situation was better than on September 1 of last year, a three per cent decrease having been registered then.

Mineral Products.—Petroleum, coke, and other mineral product works reported the first contraction of employment since the beginning of February; 200 workers were laid off by the 73 establishments reporting. They have 10,127 persons in their employ. Firms in Quebec, the Maritime and Prairie Provinces recorded the losses. Employment had increased on September 1, 1924, but the index number then was somewhat lower.

Logging

Seasonal expansion on a rather smaller scale than on the same date of last year was indicated in logging camps at the beginning of September, when 2,030 workers were added to the staffs of the 203 employers making returns; they had 15,124 workers. Quebec and Ontario registered practically all this increase. Employment in logging is in less volume than during last autumn.

Mining

Coal.—Considerable reductions in personnel were noted in coal mining in both eastern and western coal fields. Statements were tabulated from 90 operators having 22,770 employees, as compared with 24,468 on August 1. Additions to staffs had been indicated at the same time in 1924 and the index number then was several points higher.

Metallic Ores.—Metallic ore mines in British Columbia afforded more employment than in the preceding month. The 44 employers whose figures were received had 13,955 persons in their employ, as compared with 13,797 on August 1. Very substantial contractions had been made on September 1 of last year, when the index number was on a much lower level.

Non-Metallic Minerals (Other than Coal).—Employment in quarries generally was slacker, 235 persons having been laid off by the 73 firms making returns in this group. They had 6,627 men on their payrolls. A minor contraction was indicated at the same time last year, when conditions were not so favourable.

Communication

Telegraphs and telephones both afforded rather less employment, the former division

showing the greater falling off. Reports were compiled from 185 companies having 23,842 employees, or 281 less than on August 1. Most of the reduction was in Quebec. A very similar falling off took place at the beginning of September a year ago.

Transportation

Street and Electric Railways.—Considerable improvement was noted in the local transportation division, largely in the Prairie Provinces. The working force of the 115 firms

making returns comprised 19,427 persons, as against 18,886 in the preceding month. Insignificant additions to staffs were reported at the same time in 1924.

Steam Railways.—Further though much less extensive gains were noted in this division, in contrast with the heavy shrinkage recorded on September 1 last year. Improvement was showed in British Columbia and Quebec, but in Ontario and the Prairie Provinces the tendency was downward. Statements were tabulated from 102 employers having 76,271 per-

TABLE III—Index Numbers of Employment by Industries (Number employed by the reporting firms in January, 1920=100)

Industry	* Relative Weight	Sept. 1, 1925	August 1, 1925	Sept. 1, 1924	Sept. 1, 1923	Sept. 1, 1922	Sept. 1, 1921
Manufacturing	55.4	89.4	88.5	84.5	93.0	86.5	79.3

*The term "relative weight" is explained in the last paragraph of the accompanying text.

sons on their payrolls; this was 162 more than at the beginning of August.

Shipping and Stevedoring.—Employment in water transportation showed a decline, which, however, was much smaller than that which took place on September 1, 1924, when the index number was some points lower. A combined working force of 14,417 men was employed by the 58 firms making returns, who had 14,994 employees in the preceding month. Ports in the Maritime Provinces registered greater activity, but in Ontario and Québec curtailment was indicated.

Construction and Maintenance

Building.—For the seventh consecutive month, employment in building construction increased, 872 persons being added to the staffs of the 300 contractors reporting. They had 27,957 employees. Firms in Québec, Ontario and British Columbia added to their staffs. Rather larger expansion took place on September 1 of last year, but employment then was in smaller volume.

Highways.—A further though less extensive reduction in personnel was indicated by the 119 highway contractors whose statistics were tabulated and who had 1,146 workers, as compared with 27,774 in their last report. All provinces except British Columbia shared in the losses. Smaller decreases were noted at the same time in 1924.

Railways.—Further contractions of a seasonal character were reported on railway construction and maintenance, according to 36 employers in this division having 40,914 in their employ. On August 1, they had 44,519 workers. The Prairie Provinces showed most curtailment, as is usual at the time of year, but reductions were effected in all provinces. At the beginning of September last year there was more pronounced shrinkage.

Trade

Wholesale trade was considerably busier, but there were moderate declines in retail stores. The result was an increase of 305 persons in the staffs of the 574 establishments making returns, which had 56,536 workers. The greatest improvement took place in Québec and the Prairie Provinces. Employment in trade is on a higher level than on September 1 of any other year of the record; very much smaller gains were noted on that date in 1924.

The accompanying table gives index numbers of employment by industries as at the first of September and August, 1925, as compared with September 1 of the last four years. The columns headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated area or industry bears to the total number of employees reported in Canada by the firms making returns on September 1, 1925.

EMPLOYMENT OFFICE REPORTS FOR AUGUST, 1925

THE volume of business transacted by the offices of the Employment Service of Canada during the month of August, 1925, showed an increase of 163 per cent in the average daily placements over that of the preceding period, while a gain of over 126 per cent was registered when compared with the average daily placements effected during the corresponding month a year ago.

The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the office of the Service throughout Canada, computations being made semi-monthly. It will be noticed that the curves of vacancies and placements in relation to applications rose rapidly throughout the month, this being due to the heavy demand for harvesters in the Prairie Provinces. In both instances the ratios of vacancies and placements to applications were decidedly higher than those attained during August of last year, the harvesting and threshing season

throughout the West having opened two weeks earlier than in 1924. The ratio of vacancies to each 100 applications was 90.2 and 102.0 during the first and second half of August, 1925, in contrast with the ratio of 70.7 and 84.9 during the same period in 1924. The ratio of placements to each 100 applications during the period under review was 86.9 and 92.7 as compared with 64.7 and 82.1 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications recorded during the first half of August was 2,344, as compared with 1,488 during the preceding period, and with 1,367 daily during the corresponding period in 1924. Applications for work during the latter half of the month registered 4,101 daily, in contrast with 2,060 during the latter half of August a year ago. Employers notified the Service of a daily average of 2,115 vacancies during the first half, and 4,185 during the latter half of the month under review, as compared with a daily average of 967 and 1,749 vacancies during the month

of August, 1924. Vacancies offered to the Service during the latter half of July, 1925, averaged 1,230 daily. The Service effected an average of 2,037 placements during the first half of August, of which 1,748 were in regular employment and 289 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,114 daily, and with 885 daily during the first half of August, 1924. During the latter half of the month under review placements averaged 3,801 daily (3,463 regular and 338 casual), as compared with an average of 1,692 daily during the corresponding period a year ago.

During the month of August, 1925, the offices of the Service referred 77,186 persons to vacancies and effected a total of 75,887 placements. Of these the placements in regular employment numbered 67,745, of which 63,896 were of men and 3,849 of women, while placements in casual work totalled 8,142. Opportunities for employment reported by employers numbered 72,551 for men and 9,335 for women, a total of 81,886. The number of applications for work was 83,777 of which 73,785 were from men and 9,992 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (8 months).....	188,926	69,564	258,490

MARITIME PROVINCES

Orders received at employment offices in Nova Scotia and New Brunswick during the month of August, 1925, were nearly 8 per cent less than in July, but almost 2 per cent higher than in August of last year. Gains under both comparisons were reported by New Brunswick offices, and declines by offices in Nova Scotia, the gains over July in positions offered by the former province being more than offset by reductions in Nova Scotia. Placements in Nova Scotia were nearly 20 per cent lower than in July, and more than 5 per cent lower than in August, 1924. In New Brunswick placements were nearly 2 per cent higher than in July, and nearly 21 per cent larger than in August of last year. Industries in which most of the placements were effected in Nova Scotia were logging, 112; manufacturing, 71; farming, 49; construction and maintenance,

74; and services, 184. In New Brunswick the majority of the placements effected were services, 444; and construction and maintenance, 73. During the month of August 253 men and 51 women were placed in regular employment by Nova Scotia offices, and 185 men and 90 women by offices in New Brunswick.

QUEBEC

Opportunities for employment listed at employment offices in Quebec during August showed an increase of nearly 17 per cent over the preceding month, and more than 107 per cent over the corresponding month of last year. All industries except transportation participated in the gains recorded in the latter comparison, that in logging being the most pronounced. Placements were nearly 6 per cent higher than in July, and about 50 per cent larger than in August, 1924. Industrial divisions in which most of the placements were effected were manufacturing, 232; logging, 436; farming, 76; construction and maintenance, 622; services, 694; and trade, 60. Placements in regular employment during the month under review numbered 1,456 of men and 659 of women.

ONTARIO

There was an increase of nearly 16 per cent in the number of vacancies listed during August over the preceding month, and more than 14 per cent over the corresponding month of last year. In the latter comparison a decline was recorded in logging orders, but this was more than offset by substantial gains in the manufacturing industries, construction and services. Placements were over 13 per cent greater than in August, 1924, and about 4 per cent higher than in July. The number of placements effected during the month under review by industrial divisions included manufacturing, 1,466; logging, 732; farming, 1,581; mining, 104; transportation 405; construction and maintenance, 2,993; services, 3,505; and trade, 378. There were during the month 7,189 placements of men and 1,044 placements of women in regular employment.

MANITOBA

The number of vacancies listed during August were 172 per cent higher than in July, and nearly 150 per cent higher than in the corresponding month of last year. Increased activity in farming where harvest opportunities commenced about two weeks earlier than last year, was responsible for the abnormal increases in both comparisons. Placements were 140 per cent larger than in July and 107 per cent in excess of August, 1924. Industries in which most of the placements

were effected were manufacturing, 200; farming, 6,030; construction and maintenance, 736; services, 1,730; and trade, 176. Placements in regular employment numbered 6,737 of men and 582 of women.

SASKATCHEWAN

Orders listed by Saskatchewan offices during August were 764 per cent higher than in July, and about 309 per cent greater than in August of last year. Harvest, which commenced earlier this year than last, was responsible for the increases in both comparisons. Placements were 724 per cent higher

over July did not increase to quite the same extent as vacancies, but when compared with August of last year the percentage of placements was higher, an increase of 220 per cent being recorded. The bulk of the placements effected during the month was in farming, in which industry employment was secured for 11,107 workers. The industrial groups in which employment was found for more than 100 workers included manufacturing, 296; mining, 149; construction and maintenance, 903; and services, 803. Placements in regular employment numbered 12,453 of men and 423 of women.

than in July, and over 370 per cent higher than in August of last year. Nearly 93 per cent of the placements effected during the month were in farming, where employment was secured for 23,928 workers. The balance of the placements by industries included manufacturing, 208; construction and maintenance, 747; and services, 783. There were during the month 24,796 placements of men and 467 placements of women in regular employment.

ALBERTA

Opportunities for employment were about 305 per cent higher in August than in the preceding month, and almost 190 per cent higher than in the corresponding month of last year, the earlier harvest demand being responsible for the excessive increase in both comparisons. The percentage of placements

BRITISH COLUMBIA

During the month of August orders listed in British Columbia were over 14 per cent higher than in July, and nearly 68 per cent in excess of August, 1924, increased activity in the manufacturing industries, construction and maintenance, and services being the contributing factors for the increase in the latter comparison. Placements were about 227 per cent higher than in July, and nearly 88 per cent larger than in August of last year. These large increases are mainly attributable to the heavy placements of harvest workers in the Prairie Provinces, although substantial gains over August, 1924, were also recorded in the manufacturing of lumber and its products, and construction and maintenance. Placements by industrial groups included manufacturing industries, 741; logging, 399; farming, 8,526;

mining, 155; transportation, 215; construction and maintenance, 1,291; services, 1,553; and trade, 182. During the month 10,827 men and 533 women were placed in regular employment.

Movement of Labour

During August, 1925, the offices of the Employment Service of Canada made 67,745 placements in regular employment, of which 59,014 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 15,397 were granted the Employment Service reduced transportation rate, 4,043 going to points within the same province as the despatching office, and 11,354 to other provinces.

In Nova Scotia one special rate certificate was issued by the Sydney office to a farm worker travelling to the Regina zone. Quebec offices granted 199 certificates, 123 of which were provincial and 76 interprovincial. Of the provincial transfers the Quebec office issued 89 to construction labourers, and Montreal 20 to bushmen and 14 to sawmill labourers, all going to points within their respective zones. The interprovincial movement included 75 bushmen sent to Sault Ste. Marie and one cook to Timmins, all from the Montreal office. Ontario offices issued 492 certificates, 323 of which were for persons going to points within the same province as the despatching office and 169 to other provinces. Within the province 290 certificates were issued to bushmen and labourers going to camps in Northern Ontario. Sudbury sent 24 construction labourers to Chatham, and the remainder of the certificates issued were for 3 miners, 3 cooks, one farm worker, one teamster, and one sawmill labourer going to Fort William, Chatham, North Bay, Timmins, Sudbury and Port Arthur zones. The interprovincial transfers were all for harvesters, travelling from Fort William and Port Arthur districts to points in Manitoba and Saskatchewan. Of these Manitoba received 114 and Saskatchewan 55. In Manitoba 2,466 workers benefited by the Employment Service reduced rate 1,257 going to points within the province and 1,209 to outside districts. Twelve hundred and forty-six of the provincial transfers were for harvesters and the remaining 11 for hotel workers travelling to the Brandon, Dauphin and Winnipeg zones. To Saskatchewan were transferred 1,106 harvesters, to Alberta 50 harvest hands, to Prince Rupert 17 bushmen, to Port Arthur 28 bushmen, 2 sawmill labourers, one cook and one cement finisher and to Regina 4 railway construction labourers.

The Saskatchewan offices granted 929 certificates, 903 for points within the province and 26 to other provinces. The interprovincial movement included 17 harvesters going to Alberta, and 6 harvesters to Manitoba. Regina sent 2 elevator workers to Calgary and one cook to Brandon. Of the 903 provincial transfers 838 were for farm workers and the balance was practically all for teamsters, domestics and bushmen going to the Moose Jaw, Saskatoon and Prince Albert zone. Alberta issued 1,722 certificates, 1,308 for points within the province and 414 to other provinces. Of those issued to points outside the province Edmonton granted 407 certificates to harvesters and Calgary 4 to harvesters, all going to Saskatchewan. Edmonton also sent 3 farm housekeepers to Saskatoon. Of the provincial transfers 1,171 were farm hands and harvest workers, 15 were teamsters, 15 were cooks, 9 were miners, and the remainder were mainly domestic workers and general labourers for the rural districts of the province. British Columbia offices issued 9,588 transportation certificates, 129 provincial and 9,459 interprovincial. The latter were all for harvest workers who travelled at the reduced harvest rate to the grain areas in the prairie provinces, 3,790 to Alberta, 5,612 to Saskatchewan and 57 to Manitoba. Of these 5,717 were sent by Vancouver. Of the 129 provincial transfers Vancouver granted 101, the majority of whom were for fruit workers, miners, loggers and sawmill labourers going in the vicinity of Vernon, Kamloops, Vancouver and Penticton. From Prince George 12 axemen and 2 rockmen travelled to Kamloops, one planer from Nelson to Prince George, one cook from New Westminster to Revelstoke, 4 miners and 5 swamper from Prince Rupert to points within its own zone, one box maker and one fruit picker from Victoria to Vernon, one hotel worker from Penticton to its own zone.

Of the 14,897 workers who benefited by the Employment Service reduced rate 4,777 were carried by the Canadian National Railways, 10,611 by the Canadian Pacific Railway, one by the Kettle Valley Railway, 7 by the Pacific Great Eastern Railway, and one by the Temiskaming and Northern Ontario Railway.

Queensland Railway Employees get 44-hour Week

The Arbitration Court of Queensland, Australia, in a recent decision, fixed the working hours of all railway employees from July 1 at 44 in the week, instead of 48 hours as formerly. A measure which would make the 44-hour week general in all industries is now before the Parliament of New South Wales.

BUILDING PERMITS ISSUED IN AUGUST, 1925

THE value of the building permits issued in sixty cities during August stood at \$9,258,752, as compared with \$12,641,551 in July, 1925, and \$9,265,945 in August, 1924. There was, therefore, a seasonal decline of 26.8 per cent in comparison with the preceding month, but of only one-tenth of one per cent in the more significant comparison with the same month of last year. Detailed statements were furnished by some 50 cities, showing that they had issued more than 1,100 permits for dwellings estimated to cost approximately \$4,800,000 and about 2,500 permits for other buildings at a proposed cost of over \$3,900,000.

All provinces except Nova Scotia and Saskatchewan showed reductions in the value of the building permits issued as compared with July, 1925. There were gains of 113.2 per cent and 36.8 per cent, respectively, in those provinces. Of the losses in the remaining provinces, that of \$2,492,493 or 51.2 per cent in Quebec was most pronounced. As compared with August, 1924, Ontario, Manitoba, Alberta and British Columbia registered increases in the value of the permits issued, that of 37.2 per cent in Ontario being largest. Quebec recorded the greatest decrease of \$1,544,768 or 39.4 per cent. The value of the building permits issued in Vancouver was higher than in either July, 1925, or August, 1924; in Toronto and Winnipeg there were losses in the first and increases in the second comparison, while Montreal showed declines in both comparisons. Halifax, Westmount, Brantford, Guelph, Hamilton, Kingston, Niagara Falls, Oshawa, St. Thomas, Sarnia, Windsor, Riverside, Walkerville, Woodstock, Brandon, Moose Jaw, Edmonton, South Vancouver and Victoria registered increases both as compared with the preceding month and with the corresponding month of last year.

Cumulative record for first eight months, 1925.—The value of the building authorized in 60 cities during the first eight months of this year was \$86,563,152 as compared with \$80,649,792 in 1924, \$97,269,465 in 1923, \$104,987,692 in 1922, \$77,293,840 in 1921 and \$86,145,140 in 1920. There were, therefore, increases of 7.3 per cent, 12 per cent and 0.5 per cent in 1925 as compared with 1924, 1921, and 1920, but the total was 11 per cent and 17.5 per cent lower than in 1923 and 1922, respectively. The Bureau's weighted index number of wholesale prices of building materials averaged 154.0 during the first eight months of 1925, compared with 162.6 in 1924, 166.8 in 1923, 161.8 in 1922, 192.1 in 1921 and 214.6 in 1920.

The accompanying table gives the value of

building permits issued in 60 cities during July and August, 1925, and August, 1924. The 35 cities for which records are available since 1910 are marked with asterisks:

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Iron, Steel and Products

EDMONTON, ALBERTA.—MASTER SHEET METAL ASSOCIATION AND THE AMALGAMATED SHEET METAL UNION, No. 371.

Agreement to be effective from May 1, 1925, until April 30, 1926, and for another year unless three months' notice of change is given.

Minimum wage, per hour, sheet metal workers, 90 cents; improvers, 70 cents.

A committee of three from each side shall finally decide whether apprentices are qualified to enter the union. Improvers shall have served three years. One improver to a shop, and one to each two men. At the end of a year an improver shall be brought before a committee of three from each party who shall decide whether he is competent to become a journeyman. Improvers may be employed as journeymen if no journeymen are available. At least one apprentice to each shop, and one for every three journeymen.

Hours per week, forty-four, except from December to March, inclusive, when shorter hours may prevail at the option of the employer, in accordance with the state of the trade.

A shop steward shall be appointed by the union for each shop. When there are more journeymen than one employed foreman may act as steward, and with the manager may deal with disputes arising.

Employees must be on the job at 8 a.m. and perform 8 hours' work before leaving the job within the city limits.

Overtime from 5 p.m. until midnight, time and one-half. Thereafter and Sundays and holidays, double time. Saturday afternoon, time and one-half.

An employee working outside the city limits shall receive transportation and board with a two months' limit, four hours' notice to be given before starting. Two hours' time shall be allowed men travelling between 5 p.m. and 8 a.m. Working outside of the city a man may work eight or ten hours as he chooses but over ten hours shall be overtime.

No member may work in a shop not affiliated with the Masters' Association except where impossible for a member of the association to give steady employment to union men.

The union agrees to discipline members doing sheet metal work except in a legitimate shop. This not to apply to provincial or dominion government work.

Manufacturing: Printing and Publishing

ST. JOHN, NEW BRUNSWICK.—LOCAL FIRMS AND ST. JOHN TYPOGRAPHICAL UNION No. 85.

Agreement of May 1, 1924, as summarized in the *LABOUR GAZETTE* for September, 1924, was extended to be effective until May 1, 1926.

Construction: Buildings and Structures

MONTREAL, QUEBEC.—CERTAIN LOCAL CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF PLASTERERS AND CEMENT FINISHERS, No. 33.

Agreement to be in effect from May 1, 1925, until May 1, 1927, with three months' notice of change.

Hours per day, eight, to be worked between 8 a.m. and 5 p.m., and four on Saturdays, ending at 12 noon. Work may be done on Saturday afternoons only if members have secured a permit from the business agent.

Wages per hour, from May 1, 1925, until May 1, 1926, \$1.00; from May 1, 1926, until May 1, 1927, \$1.12½.

Apprentices: not more than two to an employer, apprentices when starting to be not more than 16½ years of age.

Overtime work and work on Sundays and four chief holidays, double time.

On out of town work, transportation, board expenses, and travelling time between 8 a.m. and 5 p.m. are to be paid; board expenses are not to be paid when worker loses time of his own accord.

Business agent may enter any building on business for the local in working hours.

Service: Public and Municipal

MEDICINE HAT, ALBERTA.—THE CITY COUNCIL REPRESENTING THE CITY OF MEDICINE HAT, AND THE CIVIC EMPLOYEES' FEDERAL LABOR UNION, No. 46.

Agreement in effect from January 1, 1925, until December 31, 1925, and thereafter unless terminated by thirty days' notice.

The City Council is to appoint a committee upon proper notice being given to receive a grievance committee from the union. No discrimination against union members. Heads of departments shall not use their positions to solicit donations from employees. All except hourly or daily employees shall receive pay for public holidays. Wages not exceeding one month shall be paid in cases of sickness after six months' service, on production of certificate. Members may have leave without pay to attend union conventions as delegates. Copies of resolutions of the Council affecting civic employees shall be forwarded to the secretary. When vacancies occur senior men shall be given preference for promotion, if efficient. Employees working out of town will be allowed reasonable expenses.

Hours for outside labour, 8 a.m. to 5 p.m. from October 1, to April 1, and 7.30 a.m. to 5 p.m. from April 1, to October 1, with one hour for lunch. Hours on Saturday, 7.30 a.m. to 1 p.m. Two weeks' holiday with pay each year to outside men after 12 months' service, except in case of men employed by hour or day. Overtime rate, time and one-half to men employed by hour or day. Former employees who are returned soldiers will be given preference of employment if

efficient, other former employees being given next preference.

Returned soldiers who are resident in Medicine Hat at time of enlistment and engaged by the city on discharge may count service overseas as service with the city. If the matter of altering hours, pay or conditions comes up during the year. Council will confer with a committee of the union to settle the matter.

Police Department—

Hours per day, eight; six days per week.

Certain clothing and equipment to be supplied.

Constables are to be granted fourteen days' leave of absence and sergeants and detectives eighteen days each year, with pay, after one year's service.

All ranks to be granted pay, less workmen's compensation on account of sickness or injuries resulting from their employment, not exceeding sixty days, on production of medical certificate.

Wages per month—1st class constables, \$125; 2nd class, \$115; 3rd class, \$107; sergeants and detectives, \$135 and \$140; clerk and desk officer, \$10 per month over his grade as constable.

Public Works and Engineer's Department—

Hours per day, eight; teamsters will work ten hours per day from April 1 to September 30, with ten hours' pay for nine hours' work on Saturday, and nine hours' the remainder of the year.

Wages for hourly employees, labourers, first year, 40 cents; after one year, 50 cents; teamsters, first year, 45 cents; after one year 50 cents. Other employees, paid by the month.

Sanitary, Gas and Parks Departments—

In sanitary and gas department, two weeks' leave of absence with pay after one year's service. Labourers in gas and parks departments, same pay as in public works department. Hours per day in parks department, eight.

City Treasurer's Department—

Hours of work—from 8.30 a.m. to 5.30 p.m., 1½ hours for lunch. Saturday, 8.30 a.m. till noon. Employees are paid by the month. The cashier's cage is to be closed at 4.30 p.m. five days a week and at noon on Saturday. Permanent staff, fourteen days' leave of absence each year with pay, after one year's service.

MEDICINE HAT, ALBERTA.—CITY OF MEDICINE HAT AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, No. 348, EMPLOYED BY THE CITY.

Agreement to be in effect from January 1, 1925, until January 1, 1926; and thereafter, unless thirty days' notice be given in writing of desire to amend, substitute, or allow to expire.

To be a foreman a man must have been engaged at least four years in one or more branches of the trade.

A journeyman shall be one who has had at least four years' experience in one or more branches of the trade. An apprentice shall be one who has worked at least three months at some branch of the trade.

Hours per day, 8 a.m. to noon and 1 p.m. to 5 p.m. Overtime, first five hours, time and one-half; thereafter, double time. Holiday work, double time.

Men employed by the month shall not be subject to reduction for lost time unless they receive overtime.

Employees in service of the city continuously for one year, not more than one month's sick pay during 1925 except at discretion of the city council.

An employee incapacitated by accident while in city's service, shall receive such compensation from the

city as added to amount received under the Workmen's Compensation Act will equal regular wage. Period not to exceed sixty days.

Apprentices to serve four years, doing work of journeymen during last 12 months if required. There shall be one apprentice to three journeymen in the electrical employ of the city, except in the case of inside wiremen, where there shall be one to one.

Double time shall be paid for certain dangerous work. Employees who have served for one year shall receive pay for Dominion holidays and two weeks' holiday on full pay per year.

No discrimination against employees for union activities.

The Mayor and Council shall at all times receive a grievance committee.

A permanent employee shall give one month's notice before leaving the employ of the city; and shall be given one month's notice of being relieved of his position or one month's pay.

At expiration of first 60 days of any year, or if agreement has not been renewed, either party may require that their proposition be submitted to arbitration, the employees agreeing that there shall not be a strike until arbitration has been tried.

Wages per hour—foreman, 97½ cents; journeyman, 85 cents; apprentices, 1st year, 50 cents; 2nd year, 60 cents; 3rd year, 70 cents; 4th year, 75 cents.

Any violation or annulment of agreement with any local union of the International Brotherhood of Electrical Workers annuls all agreements entered into by this city and other locals of this union.

MEDICINE HAT, ALBERTA.—CITY OF MEDICINE HAT AND THE CANADIAN BROTHERHOOD OF STATIONARY ENGINEERS, FIREMEN AND HELPERS, LOCAL UNION, No. 5.

Agreement to be effective from March 9, 1925, until December 31, 1925, and for one year thereafter unless sixty days' notice in writing is given of cancellation.

The council shall appoint a committee, upon proper notice being given, to receive a grievance committee from the union.

No discrimination to be shown employees for connection with trade organizations.

Permanent employees shall be given two weeks' holidays with pay each year after one year's service.

Hours for operators: per day, eight; per week, forty-eight. On shift work there shall be sixteen consecutive hours' rest between shifts during which time work done other than changing shifts during relief shall be overtime.

For work on legal holidays or on employee's day off, rate of pay, time and one-half, or equivalent time off shall be given.

An employee incapacitated owing to accident while in the service of the city shall receive pay, less workmen's compensation, not exceeding sixty days, on production of medical certificate.

Employees in service of the city for one year, not more than one month's sick or quarantine pay during 1925 except at the discretion of the Mayor and Council.

Transportation shall be furnished at expense of the city to staff at power house travelling between City Hall and power house.

Permanent employees leaving the service shall give one month's notice; likewise, when relieved of positions they shall have one month's notice or one month's pay.

Wages, per month—2nd class engineers, \$170; relief engineers, \$150; firemen, \$125; waterworks operators, \$125 to \$150; boiler washers, \$125; machinist, \$170; blacksmith, \$145; relief and repair man, \$125.

FAIR WAGE CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING September the Department received information regarding twenty-two contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by order in council for the protection of the labour to be employed. In twenty of these contracts the general fair wage clause is inserted, requiring, in regard to all classes of labour, adherence to the current wages rates and hours of labour in effect in the district in which the work is to be performed. The two remaining contracts further contained schedules of rates and hours based on the current standards of the district in these respects. The standard labour conditions sanctioned by the order in council, which appear in the twenty-two contracts already referred to, are stated in the terms following:

LABOUR CONDITIONS

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the

Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing: (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to

the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Reconstruction of the downstream part of the Canadian National Railway Wharf in concrete at Lachine, P.Q. Name of contractor, A. E. Farley, Ottawa, Ontario, and P. R. Grant, Hazeldean, Ontario (Farley & Grant). Date of contract, September 10, 1925. Amount of contract, \$10,656. A fair wage schedule is inserted in the contract as follows:

Trade or Class of Labour	Rates of wages not less than	Hours per day
	\$ cts.	
Foreman.....	0 70 per hour	10
Carpenters.....	0 55 "	10
Diver.....	0 75 "	10
Diver's helper.....	0 45 "	10
Concrete mixers.....	0 35 "	10
Concrete placers.....	0 35 "	10
Labourers (ordinary).....	0 30 "	10
Carters (single).....	5 00 per day	10
Carters (double).....	8 50 "	10

Construction and completion of asphalt surface driveway on Parliament Hill, Ottawa, Ontario. Name of contractor, O'Leary's Limited, of Ottawa, Ontario. Date of contract, September 16, 1925. Amount of contract, \$23,615. A fair wage schedule is inserted in the contract as follows:

Trade or Class of Labour	Rate of wages not less than	Hours per week
	\$ cts.	
Foreman.....	7 00 per day	44
Asphalt roller engineer.....	6 00 "	44
Rakers.....	0 53 per hour	44
Tampers.....	0 53 "	44
Form setters.....	0 53 "	44
Labourers.....	0 50 "	44
Teams.....	1 00 "	44
Carts (single).....	0 70 "	44

Harbour improvements at Oshawa, Ontario. Name of contractor, Thunder Bay Harbour Improvement Company, Limited of Port Arthur, Ontario. Date of contract, September 5, 1925. Amount of contract, \$50,910.88.

Reconstruction of 772.5 feet of the East Pier at Port Burwell, Ontario. Name of contractor, Thunder Bay Harbour Improvement Company, Limited, of Port Arthur, Ontario. Date of contract, August 22, 1925. Amount of contract, \$55,509.82.

Supply of all material and erection of the superstructure of the proposed greenhouse at Rideau Hall, Ottawa, Ontario, using Lord and Burnham's standard type of curved eave greenhouse. Name of contractor, Lord & Burnham Company, Limited, St. Catharines, Ontario. Date of contract, September 9, 1925. Amount of contract, \$8,200.

Supply and installation of new hot water boilers in the Post Office Building at Sandwich, Ontario. Name of contractor, F. J. Tansley, Windsor, Ontario. Date of contract, September 10, 1925. Amount of contract, \$830.

New roofing Armoury Building, Renfrew, Ontario. Name of contractors, Canadian Rogers Sheet Metal & Roofing, Limited, Toronto, Ontario. Date of contract, September 11, 1925. Amount of contract, \$4,263.00.

Supply and installation of new hot water boilers in the Public Building at Napanee, Ontario. Name of contractors, Elliott Brothers, Kingston, Ontario. Date of contract, September 8, 1925. Amount of contract, \$1,544.

Supply and installation of interior fittings in public building at Verdun, P.Q. Name of contractor, The J. T. Schell Company, Alexandria, Ontario. Date of contract, September 25, 1925. Amount of contract, \$2,835.

Dredging channel in Lake St. François, Valleyfield, P.Q. Name of contractor, Les Chantiers Manseau, Sorel, P.Q. Date of contract, September 21, 1925. Amount of contract, Class "A" \$9 per cubic yard, place measurement; Class "B," \$0.85 per cubic yard, place measurement.

Dredging Lanctot Basin, Sorel, Richelieu County. Name of contractor, The National Dock & Dredging Corporation, Limited, Quebec, P.Q. Date of contract, September 14, 1925. Amount of contract, Class "B," \$0.34½ (scow measurement) per cubic yard.

Dredging channel, Nicolet, P.Q. Name of contractor, The National Dock and Dredging Corporation, Limited, Quebec, P.Q. Date of contract, September 14, 1925. Amount of contract, Class "A," \$4 per cubic yard, scow measurement, class "B," \$0.35 per cubic yard, scow measurement.

Dredging deepwater berths and Dominion Coal Company's wharf, West St. John, N.B. Name of contractor, St. John Dry Dock & Shipbuilding Company, Limited, St. John, N.B. Date of contract, August 24, 1925. Amount of contract, Class "B," \$0.39½ per cubic yard place measurement for deepwater

berths and \$0.80 per cubic yard place measurement for Dominion Coal Company's wharf, West St. John, N.B.

Dredging channel between Tidd's Island and Hay Island at Gananoque, Ontario. Name of contractor, Randolph Macdonald Company, Limited, Toronto, Ontario. Date of contract, August 31, 1925. Amount of contract, Class "A," \$5 per cubic yard, place measurement; Class "B," \$0.65 per cubic yard, place measurement.

Dredging channel at mouth of river in Lake St. Pierre, River St. François, P.Q. Name of contractor, Aimé Laperrière, Pierreville, P.Q. Date of contract, August 29, 1925. Amount of contract, class "A," \$0.95 per cubic yard, place measurement; Class "B," \$0.30 per cubic yard, place measurement.

Dredging Harbour, Meaford, Ontario. Name of contractor, The C. S. Boone Dredging & Construction Company, Limited, Toronto, Ontario. Date of contract, September 25, 1925. Amount of contract, Class "B," \$0.52 scow measurement.

Dredging St. John River, N.B., at McGowan's Wharf, Maugerville Wharf, Barker's Wharf, William's Wharf and Upper Gagetown Wharf. Name of contractor, J. S. Gregory, St. John, N.B. Date of contract, August 31, 1925. Amount of contract, Class "B," \$0.65 per cubic yard scow measurement.

Dredging the harbour at Midland, Ontario, as per plan, and removal of shoal spots at Tiffin Elevator. Name of contractor, The Randolph Macdonald Company, Limited, Toronto, Ontario. Date of contract, September 3, 1925. Amount of contract, Class "A," \$5 Midland Harbour, and \$5 Tiffin Elevator; scow measurement, \$10 for solid rock place measurement; Class "B," \$0.58 Midland Harbour, \$0.90 Tiffin Elevator, scow measurement.

Dredging channel to wharf and berth at Wharf, Wallace, N.S. Name of contractor, The Halifax Dredging Company, Limited, Halifax, N.S. Date of contract, August 24, 1925. Amount of contract, Class "A," \$9 per cubic yard scow measurement. Class

"B," \$0.75 per cubic yard, scow measurement.

Dredging at Courtenay River, B.C. Name of contractor, Arnett Dredging Towing and Salvage Company, Limited, of Vancouver, B.C. Date of contract, June 25, 1925. Amount of contract, Class "B," \$0.17 per cubic yard, place measurement.

Dredging opening of Northern entrance at Petit de Grat Harbour, N.S. Name of contractor, Atlantic Dredging Company, Limited, Louisburg, N.S. Date of contract, September 10, 1925. Amount of contract, Class "A," \$10.50 per cubic yard scow measurement; Class "B," \$0.88 per cubic yard, scow measurement.

DEPARTMENT OF RAILWAYS AND CANALS

Construction and completion of a concrete dam at lock No. 23 (known as Lock 4, Peterborough-Lakefield Division) of the Trent Canal, said dam to be located at a point about $4\frac{1}{2}$ miles north of Peterborough, Ontario. Name of contractor, "Russell Miller Construction Company," Toronto, Ontario. Date of contract, September 18, 1925. Amount of contract, schedule rates (approximately \$97,091.75, estimated from estimates quantities).

POST OFFICE DEPARTMENT

The following is a statement of payments made in September, 1925, for supplies ordered by the Post Office Department, and subject to the provisions of the Fair Wages clause:—

Nature of orders	Amount of orders
	\$ & cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	578 00
Making and repairing rubber stamps, daters, etc.	235 18
Making up and supplying letter carriers' uniforms, etc.....	19,835 20
Stamping pads, ink, etc.....	293 81
Mail bag fittings.....	1,700 00
Scales.....	295 75
Repairs to letter boxes, etc.....	101 65

Workmen's Compensation in Ontario in 1925

The total benefits awarded under the Workmen's Compensation Act during the nine months ending September 30 amounted to \$4,109,614.34, as compared with \$4,633,755.29 during the corresponding period of the year 1924.

The total number of accidents reported during the nine months was 43,982, as against a total of 44,260 during the first nine months of 1924, being a decrease of 278. The fatal

accidents numbered 244, as against 281 during the first nine months of 1924. The number of accidents reported during September this year was 5,507, as compared with 5,216 in September, 1924.

The average daily number of accidents reported during the first nine months of 1925 was 188, the average amount of benefits awarded daily was \$17,562, and the average number of cheques issued daily was 632.

PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1925

Cost of Living, Prices of Staple Articles, and Index Numbers

THE movement in prices during September was downward, declines occurring in both the family budget in terms of retail prices and in the Dominion Bureau of Statistics index number of wholesale prices. The decline in the former was mainly due to a seasonal fall in the price of potatoes while in the latter lower prices for wheat, coarse grains and flour were sufficient to offset all increases.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was \$10.81 at the beginning of September as compared with \$10.84 for August; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. Besides a substantial seasonal decline in the price of potatoes there were less important declines in the prices of beef, sugar and evaporated apples. The most important advances were seasonal increases in the prices of eggs and butter while smaller increases occurred in the prices of pork, bacon, lard, cheese, bread, rice and prunes. Including the cost of fuel and rent with that of foods the total budget averaged \$21.02 at the beginning of September as compared with \$21.04 for August; \$20.65 for September, 1924; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38 for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, declined to 156.5 as compared with 159.5 for August; 153.9 for September, 1924; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; and 256.7 for May, 1920 (the peak). Forty-three price quotations were higher, thirty-seven were lower, while one hundred and fifty-six were unchanged.

In the grouping according to chief component material, three of the eight main groups were lower, three advanced, while two were practically unchanged. The Vegetables and their Products group was substantially

lower due to lower prices for wheat, coarse grains and flour. The declines in this group were sufficient to offset the increases in all the groups. The Textiles and Textile Products group was lower because of declines in the prices of cotton and wool. The Non-Metallic Minerals group showed a slight decline. The Animals and their Products group and the Non-Ferrous Metals group both advanced, the former because of higher prices for milk, butter, eggs, fish and sheep and the latter because of increases in the prices of lead and zinc. The Iron and its Products group was also slightly higher. The Wood and Wood Products group and the Chemicals and Allied Products group were unchanged.

In the grouping according to purpose consumers' goods rose slightly while producers' goods were substantially lower. In consumers' goods lower prices for flour, sugar, tea, veal, sheep and gasoline were more than offset by the higher prices for milk, butter, eggs, fish, coffee, foreign fruits and pepper. The decline in producers' goods was due mainly to lower prices for grains though there were also declines in materials for the textile and clothing industries, for the meat packing industries and in miscellaneous producers' materials.

In the grouping according to origin raw or partly manufactured goods declined due mainly to declines for grains, raw sugar, cotton, wool and live stock. Fully or chiefly manufactured goods were lower because of lower prices for flour, lard and gasoline. Domestic farm products were substantially lower while articles of mineral origin showed a slight decline. Articles of marine origin advanced.

The index number of wholesale prices in Canada, published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, advanced to 150 for August as compared with 148 for July; 147 for June and 149 for August, 1924. Grouped according to origin domestic goods advanced while imported goods were unchanged. Grouped by stage of manufacture producers' goods were lower while consumers' goods and raw materials advanced.

The Canadian Bank of Commerce index of exports fell from 156.10 for August to

155.52 for September while that for imports rose from 159.69 to 160.25. The combined index of both exports and imports showed little change, being 157.88 for September and 157.90 for August.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the *LABOUR GAZETTE* for January, 1925. A description of the methods used in the construction of the index number appears in the *LABOUR GAZETTE* for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of September of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the *LABOUR GAZETTE*.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses

in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1919, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices continued to decline, sirloin steak averaging 29.2c. per pound in September as compared with 29.7c. in August, round steak 23.8c. per pound in September as compared with 24.9c. in August, shoulder roast 15.3c. per pound in September and 15.8c. in August and stewing beef 11.8c. per pound in

* *LABOUR GAZETTE*, December, 1923, page 1442.

September and 12.2c. in August. Veal declined from an average of 18.4c. per pound in August to 18c. in September. Lower prices were reported from most of the localities in the western provinces. Mutton was also lower, averaging 29.3c. per pound in August and 28.8c. in September. Both fresh and salt pork advanced, the former averaging 29.3c. per pound as compared with 28.7c. in August and the latter averaging 26.3c. per pound as compared 25.8c. in August. The increases were general. Bacon and ham also averaged slightly higher. In fresh fish cod steak advanced somewhat while whitefish was slightly lower. Finnan haddie showed little change. Lard advanced slightly. Eggs showed a general advance, fresh averaging 43.3c. per dozen in September as compared with 40.8c. in August and 37.6c. in July and cooking averaging 39.2c. in September, 37.1c. in August and 33.7c. in July.

In milk higher prices were reported from Hamilton and Brantford while lower prices were reported from Timmins. Dairy butter showed a general advance, averaging 38.8c. per pound as compared with 37.1c. in August. Creamery butter showed about the same general advance as dairy, averaging 44.2c. per pound in September and 42.7c. in August. Cheese continued towards higher levels, being up from 31.2c. per pound in August to 31.8c. in September. Higher prices for bread were reported from New Glasgow, Truro, St. John, N.B., St. Hyacinthe, and London. The average price was up from 7.8c. per pound in August to 7.9c. in September. Soda biscuits were steady. Flour was unchanged in the average, increases in some localities being offset by declines in others. Rice was slightly higher, averaging 11c. per pound. Canned vegetables showed little change. Onions were down from an average of 8.7c. per pound in August to 7.2c. in September. Potatoes declined in most localities, averaging \$1.64 per 90 pounds as compared with \$2.10 in August. Prunes advanced slightly. Raisins and currants showed little change. Canned peaches advanced slightly. Sugar was slightly lower, granulated averaging 8.2c. per pound and yellow averaging 7.8c. per pound.

Anthracite coal averaged \$16.68 per ton as compared with \$16.56 in September. Higher prices were reported from St. John, N.B., Three Rivers, Sorel, St. Hyacinthe, Montreal, Hull, Ottawa, Oshawa, Orillia, Galt, Guelph, Kitchener, Woodstock, London, Windsor, Sarnia and Owen Sound. Bituminous coal showed little change, averaging \$10.11. Changes in wood prices were slight. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on price changes during the month issued by the Dominion Bureau of Statistics.

Grain prices declined substantially during September. No. 1 Manitoba cash wheat, Fort William and Port Arthur basis, was down from an average of \$1.67½ per bushel in August to \$1.37½ in September. The high price for the month was \$1.56½ per bushel reached near the beginning and the low \$1.21½ toward the end. The decline was said to be due to rumours of a surplus for export from Russia, an increase in the exportable surplus from the United States and the large supplies of the Canadian crop being marketed. Western barley was down from 82½c. per bushel to 65½c., western oats from 56c. per bushel to 49c., American corn from \$1.20½ per bushel to \$1.06½ and flaxseed from \$2.39½ per bushel to \$2.36½. Flour moved in sympathy with wheat, the price at Toronto being down from \$9.26½ per barrel to \$8.65½. Oranges advanced from \$7-\$8.25 per case to \$8.50, lemons from \$4.50-\$5 per case to \$5-\$5.75. Raw sugar was down from \$3.90½ per hundred to \$3.84. Coffee advanced slightly. Ceylon rubber rose from 82½c. per pound to 89c. Ontario potatoes at Toronto were down from \$1.30-\$1.50 per bag to \$1.30-\$1.40 while Quebec grades at Montreal rose from 80c. per bag to 97½c. Turpentine advanced from \$1.56 per gallon to \$1.60. Choice steers at Toronto were down from \$7.62½ per hundred to \$7.25, while at Winnipeg choice grades advanced from \$6.22½ per hundred to \$6.37½. Hogs at Toronto declined from \$14 per hundred to \$13.38. Sheep prices advanced from \$7.12½ per hundred to \$7.50. Fresh halibut and fresh whitefish advanced, the former from 12c. per pound to 13c. and the latter from 16c. per pound to 17c. Salt cod at Halifax rose from \$7 per hundred to \$7.25. Fowl declined 2c. per pound to 20c. Milk advanced at Toronto from \$1.70 per eight gallon can to \$2.20. Creamery butter at Montreal advanced from 40c. per pound to 42c. and at Toronto from 42c. per pound to 44c. Fresh eggs rose from 40c.-42c. per dozen in August to 45c.-48c. in September. Cotton showed little change. Raw silk rose from \$6.45 per pound to \$6.85. Wool continued to decline, being down from 4c. to 6c. per pound. In non-ferrous metals lead rose from \$9.30 per hundred pounds to \$9.55 and zinc from \$9.13 per hundred pounds to \$9.30. Anthracite coal was slightly higher at Toronto, being \$13.52 per ton as compared with \$13.42 in August. Gasoline was down 1c. per gallon to 23½c.

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA*

BRITISH COLUMBIA COAL PRODUCTION IN 1925

The coal production of the province of British Columbia for the first seven months of this year was 1,373,923 gross tons, as compared with 1,193,848 tons in the corresponding period of last year. The increase was due to greater activity in the Crowsnest Pass field, which yielded 511,050 tons, as compared with 190,041 for the first seven months of last year, during four of which the mines

were closed by a strike. The Vancouver Island mines produced 772,056 tons, as compared with 847,586 tons, and the Nicola-Princeton field 129,221 tons, as compared with 90,817 tons for the first seven months of 1924. The coke production of the province up to the end of July of this year was 200,843 tons, as compared with 146,217 tons during the corresponding period of last year.

Pensions for Employees of British Co-operatives

British Co-operative societies are developing a scheme for the retirement of employees at the age of 65 with a pension. The plan provides that each employee, male and female, is to pay into a Superannuation Fund 35 cents a week and the society an equal amount. Employees under 21 years of age are required to pay only 18 cents a week until the age of 21 is reached. Employees will retire automatically at the age of 65. The amount of superannuation pension paid to the retired employee shall be \$5 a week during the lifetime of the pensioner.

The rate of interest earned in the funds will be 4 per cent per annum, convertible half yearly. Families of employees dying before pension age may secure the return of their contributions plus compound interest at 4 per cent, whilst any contribution made by the society on their behalf remains in the fund together with interest thereon. In the event of employees leaving the service of the society their own contributions, plus compound interest at 4 per cent, are returned.

In the case of the death of an employee before he has received the whole of his contributions in superannuation, the balance, plus 4 per cent compound interest, is paid to his legal representatives. The cost of administration of the fund is borne by the society. Membership in the fund is compulsory and a part of the conditions of employment.

Manufacturers and Union Label

The Associated Manufacturers of Lighting Fixtures, with headquarters at New York, are stated to be appealing to the United States Department of Justice for a ruling on the subject of the alleged "conspiracy" on the part of the labour union in insisting on the inscription of a union label on electrical fixtures. The association at a recent meeting refused to label their product as desired by the union. "The time has come," they state,

"when the entire building construction industry must take a stand, one way or the other, in this matter. Because their refusal to install electrical equipment in certain instances is in violation of and contrary to existing agreements which these locals have entered into with the electrical contractors of New Jersey and also with a similar group in the Electrical Board of Trade in New York, we have placed the evidence before the Department of Justice."

Waste in Industry

A conference was recently held in New York City under the direction of the National Civic Federation to discuss the question of elimination of waste in industry. There were present representatives of organized workers, officials of trust companies, banking and real estate organizations, educators, engineers, architects and other professional men. Among the speakers were Secretary Herbert Hoover, of the United States Department of Commerce; President William Green of the American Federation of Labour; President Gerard Swope, of the General Electric Company; D. L. Cease of the Brotherhood of Railway Trainmen, and Marcus M. Marks, former president of the Borough of Manhattan.

Mr. Hoover recalled the report of the Federated Engineering Council, which, after a survey made under his direction, revealed that waste in industry in the United States was 30 per cent of the national effort. It was agreed that lack of co-ordination within an industry and between industries was one form of waste which could be eliminated, while co-operation between employees and management could do much to relieve another big leak in the business of the nation. Mr. Swope urged greater production and more efficient manufacturing methods, so that retail prices could be reduced and an appeal made to an ever increasing public.

Mr. Green insisted that greater efficiency in production could lower prices without reducing the wages of the workers.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Wholesale prices continued to rise in Great Britain, France, Italy, Poland and the Netherlands and also in India, Austria and China. In September there was a slight decline in prices in the United States.

Great Britain

The Board of Trade index number for August, on the base 1913=100, showed a slight decline of 0.3 per cent, to 157.0. Foods remained practically unchanged on the whole, cereals and meat and fish rising, while other

foods declined. Materials declined 0.5 per cent, all groups showing declines except textiles other than cotton, which rose 0.7 per cent.

The *Statist* index number (in continuation of Sauerbeck's figures, base period, 1867-77) showed no change at the end of August, remaining at 134.3, although there was a very small rise in the general level of wholesale prices. A rise of 1.7 per cent in foodstuffs was offset by a decline of 1.1 per cent in materials. All groups under foodstuffs advanced and those under materials all showed declines.

The *Times* index number, on the base 1913=100, rose in August 0.4 per cent to 159.0. Goods rose 4.1 per cent, cereals and meat and fish both rising sharply while other foods remained unchanged. Materials declined 1.7 per cent, the chief decline being one of 6 per cent in cotton.

The *Economist* index number, on the base 1901-05=100, advanced very slightly in August to 202.3, as compared with 202.1 in July.

"The small August change was the net result of a number of important and contradictory movements, the features being a rise in each of the food groups and a notable decline in textiles, while the other two groups also show rather lower totals. . . . In the first group (cereals and meat) barley recorded an important rise, while imported wheat and pork also contributed to the higher group aggregate. In the second (other food products) the August rise is due to the upward movement of tea and butter. Among textiles silk, flax, and English wool all rose, but the effect of this movement was greatly outweighed by the decline in raw cotton (both American and Egyptian), and in cotton cloth and cotton yarn. In the mineral group the chief movement is the fall of roughly half a crown per ton in steam coal. . . . Pig iron and tin quotations also declined, but the lead market made a recovery. In the miscellaneous

section a recession in rubber prices from the high end-of-July level is the chief point of interest."

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, reckoned in crowns (1st half of 1914=1) was 18,340 in September compared with 18,817 in August, making a decline of 2.6 per cent. Foods declined 3.8 per cent, and industrial material's declined slightly.

France

WHOLESALE PRICES.—The index of the *Bulletin de la Statistique Générale*, on the base 100 in July, 1914, was 570 for August, only one point over the July level. Foods fell 7 points or 1.4 per cent, vegetable foods showing a decline while animal foods showed no change, and sugar, coffee and cocoa rose. Industrial materials rose 1.2 per cent, all groups showing increases.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100 (gold prices), declined from its average of 134.8 for July, to 131.7 for August, or 2.3 per cent. Regarding the general price movement *Wirtschaft und Statistik* commented as follows: "The brisk seasonal movement of prices of farm products which was specially marked this year by a decline of prices of vegetable products and an advance of animal products came to a standstill at the beginning of September. Under the influence of declining prices of grain there was a backward movement in the wholesale prices index between August 12 and August 26 from 134.7 to 127.3 or 5.1 per cent. While the wholesale prices index number rose again slightly

at the beginning of September the prices of farm products declined at the same time from 133.9 on August 12 to 123.2 on August 26, a fall of 8 per cent, but rose again at the beginning of September to 123.7. In contrast, industrial materials which were unchanged until August 12 at 134.8 relaxed, chiefly owing to a casual decline in metal prices, which were firm for two months previous to the end of August. At the beginning of September the market for industrial raw materials showed on the average, with certain exceptions, a lower price level than at the corresponding period of the previous year, in which the settlement of the London agreement and the prospect for foreign credit produced an invigorating effect for which there are no parallel causes at present. In contrast with the slight animation of raw materials,

since the beginning of the year a steady rise in the prices of manufactured goods set in, and prices of producers' goods rose higher than consumers' goods."

COST OF LIVING.—The official index number of cost of living including food, rent, heat, light, clothing and sundries, showed as an average for August the figure 145.0 (1913-14=100), being thus 1.2 per cent over the level of the previous month (143.3). The corresponding index on the old basis of calculation showed with 133.2 a slight decline (0.4 per cent) from the July level. This is explained by the different system of weighting, with heavier weights for potatoes and other vegetables. Foods rose 0.4 per cent owing chiefly to increases in prices of meat and milk and their products and eggs. Rents rose 7.2 per cent in consequence of rent regula-

tions in several states and reached on an average almost 90 per cent of their pre-war level. Fuel and light showed a slight increase. Sundries also rose slightly and clothing showed no change.

Spain

WHOLESALE PRICES.—The index number of the Director General of Statistics, on the base 1913=100, declined 2 per cent to 187 in June. Foods alone rose 1.5 per cent to 199, owing to increases in the prices of animal foods. Industrial materials declined 6.5 per cent, owing to declines in prices of fuels, gas and electricity, textiles and leather, and metals.

South Africa

RETAIL PRICES.—The official index number of retail prices of foods in nine principal

end of 1920; beginning of month thereafter. (e) Beginning of month. (f) Base is average for six capital towns. (g) 15th prices hereafter, 1914=100. (m) From Jan., 1925, end of previous month. (n) No figures published.

towns (basis 1910 average of nine towns =1000) declined 1.5 per cent in July to 1382. The index for food, fuel, light and rent declined 1.0 per cent to 1343, and the figure for the same groups with sundries added declined 0.7 per cent to 1449.

China

WHOLESALE PRICES.—The index number of the Ministry of Finance, Bureau of Markets, Shanghai, on the base February, 1913=100, declined 1.5 per cent in August to 160.3. Cereals and other food products both declined, textiles advanced very slightly and metals showed no change. The four miscel-

laneous groups showed a slight fractional advance, fuels and building materials rising slightly while industrial materials and sundries declined.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1913=100, was slightly higher in August than July, registering 160.4 compared with 159.9. Farm products advanced due to rising prices of rye, wheat, cattle, hay, hides, and tobacco. Foods were higher with increases for meats, butter, coffee and flour. There were small increases recorded in cloths and clothing,

metals and metal products, building materials, chemicals and drugs. Fuel and lighting materials averaged lower with slight increases for anthracite and bituminous coal and pronounced declines in gasoline and crude petroleum. In miscellaneous commodities a drop in rubber prices caused a decline of almost 4 per cent.

"Comparing prices in August with those of a year ago, as measured by changes in the index numbers, it is seen that the general level increased 7 per cent. The largest increase was shown for the group of miscellaneous commodities, which averaged 20 per cent higher than in August, 1924. Farm pro-

ducts were 12½ per cent higher and foods 10½ per cent higher than in the corresponding month of last year. Fuels, building materials and chemicals and drugs were slightly higher than a year ago, while cloths and clothing showed practically no change. Metals and house furnishing goods, on the other hand, were somewhat cheaper."

Dun's index number (showing the cost per capita of a year's supply of commodities) registered a second slight decline on October 1, reaching \$194,827, and being 0.5 per cent under the total for September 1.

"For all foods a net decline of 1.8 per cent occurred, breadstuffs falling 8.9 per cent,

meats 1.6 per cent, and "other foods" 1.7 per cent. These changes more than offset an increase of 8.6 per cent in dairy and garden products. On the other hand, the clothing, metals and miscellaneous classes all showed slight advances. As a whole, the October 1 index number is 2.1 per cent above that of a year ago, meats, dairy and garden products, metals and miscellaneous commodities now being on a higher basis. Comparing with the pre-war figures, a rise of nearly 63 per cent is shown."

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was \$14.1520 on October 1. This

was a gain of 0.4 per cent over September 1.

"Perhaps the most significant feature in the present price situation—extremely so, indeed, if prices of the great farm staples hold at or about the October 1 price levels—is the fact that the quotations of the grains are well below those of a year ago, whereas live stock and fruits are well above. Provisions and groceries are higher than 1924 and 1923 at this date. Among the other groups, the lower levels of textiles, as compared with one and two years ago, are interesting, this reflecting lower prices for cotton and wool. Metals, on the other hand, are above last year and 1923, as are oils, naval stores and chemicals and

(a) Quarter beginning in specified month. (b) Average for year. (c) Figure for previous month. (d) Following month. index number (38 commodities) and all converted to base 1913=100. For 1920 and 1921, 76 quotations are included, and from

drugs. Miscellaneous products are higher, largely because of the advance in rubber."

COST OF LIVING.—The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base average retail prices in 1913 equal 100, showed an increase of about $\frac{2}{3}$ of one per cent in August over the July figure, reaching 164.4. The food section showed an increase of $1\frac{1}{2}$ per cent due to slight increases in the prices of nearly all the items. Clothing declined 0.8 per cent there being decreases in the prices of suits, shoes, men's hosiery, men's shirts, and cotton goods, and small increases in prices of hats, gloves, women's underwear and women's hosiery.

The fuel and light index increased 1.5 per cent owing to the fall increase in price of anthracite coal. Electricity showed decreases in certain localities. Shelter and sundries showed no change.

RETAIL PRICES.—The retail food index number of the Bureau of Labour Statistics, on the base 1913=100, increased about 0.3 per cent in August compared with July. Sixteen articles increased, the most notable being, strictly fresh eggs, canned salmon, lard, pork chops, butter and oleomargarine. Fifteen articles decreased, the most notable being onions, cabbage, bananas, leg of lamb, corn flakes and oranges. Twelve articles showed no change.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Parent union repudiating local union forfeits trust funds

ANOTHER case arising out of the situation resulting from the dual organization of carpenters in Canada was heard in September when the Second Divisional Court at Toronto dismissed the appeal of members of the Amalgamated Society of Woodworkers of Great Britain against a judgment by Mr. Justice Rose, given at Ottawa last March.*

The latter judgment dismissed an action brought by officers and members of the Canadian executive board of the Amalgamated Society of Carpenters and Joiners (the title taken by the Canadian branch of the Amalgamated Society of Woodworkers of Great Britain), the defendants being the officers and trustees of the Ottawa local union of the same society. The action was against the defendants as trustees for an accounting and for payment to the plaintiffs of all sums of money and other property in their hands as officers of the Ottawa local union. It appeared that while the English Society was registered in England no registration under either name had been effected under the Trade Union Act of Canada. Under the rules of the British union and its Canadian branch the custody of local funds remains with the local branch.

In July, 1923, a general meeting was held at the headquarters in England, at which it was declared that the American branches had proved a financial burden, and the connection with the Canadian Amalgamated Society of Carpenters and Joiners was severed. All local branches in Canada were thus cut off, the effect being that from January 1, 1924, the English society no longer held itself liable to contribute in any way to the payment of benefits in Canada. This arrangement was concurred in by the Canadian society and by the Ottawa local branch.

The trial judge held that the Canadian bodies had the right to accept the repudiation and that the action failed, basing his judgment on the view that the by-laws, rules and constitution were equivalent to a contract between the individual members and the English society, and that, the contract having been broken by the society, the plaintiffs were not in a position to claim the benefits of it; that they could not, while repudiating liability

for the benefits due to members, retain the fund which was the price paid by the members for those benefits.

The appeal court concurred in this view, holding that neither the English society, nor its subsidiary, the Canadian society, nor yet the individual plaintiffs, had any status to claim the fund, "a fund created on a basis which they had themselves destroyed." The appeal was therefore dismissed with costs.

Master who condones offence must give notice of dismissal of servant

A medical doctor engaged another doctor as his assistant, under an agreement, for a fixed period terminating October 1923, at a monthly salary of \$250, the assistant also agreeing that he would not practice as a physician within 10 miles of headquarters for 5 years after the termination of the contract, the sum of \$500 being named as liquidated damages in the event that the assistant failed to comply with these conditions. The assistant continued to serve until May, 1925, at same monthly salary, although the agreement was not formally renewed when it expired in October 1923. In April, 1925, a patient, who had received treatment from the assistant made a claim on the employing doctor for compensation, and after some negotiations a settlement was made. The employer then demanded that the assistant should pay one-fourth of the amount of the settlement, and dismissed the assistant when the latter refused to do so. The employer then brought action for an injunction restraining the assistant from practising in the district within the time limit fixed by the agreement above referred to, or in the alternative for damages for breach of covenant. The defendant counterclaimed under the Master and Servant Act for wrongful dismissal. The evidence showed that there was no actual proof that the defendant had shown lack of skill in his treatment of the patient, and that as early as June, 1924, the plaintiff knew of this treatment, but continued the defendant in his service for a year afterwards, thus condoning any negligence that might be alleged. The court therefore held that the dismissal was wrongful and that although the agreement was reasonable and valid, yet as the plaintiff had wrongfully dismissed the defendant he could not enforce against his employee a covenant in restraint of trade. However, but for the fact that the defendant was wrongfully dismissed the plaintiff would have been entitled to an injunction,

* A full account of the relations between the British and American carpenters' unions was given in the last issue of "Labour Organization in Canada," published by the Department of Labour. Another legal decision affecting the relations of the two unions was given in the LABOUR GAZETTE, March, 1925.

notwithstanding the stipulation in the agreement as to liquidated damages. The defendant should have had reasonable notice of the termination of his engagement, and was entitled to his salary for the first four days of May, 1925, with \$10 as nominal damages. Judgment was accordingly entered for the defendant for \$42.88, without costs to either party against the other.

Compensation for Total and Partial Incapacity

The Workmen's Compensation Act of Quebec provides that in case of temporary total disability the injured workman is entitled to receive a "rent" equal in amount to half the sum by which his wages have been reduced in consequence of the accident. The Superior Court at Three Rivers in a recent case ruled that the amount of the half-salary so paid during the period of total incapacity, should, when the workman was able to resume partial employment, be deducted from the amount to which he could lay claim for partial incapacity. This ruling was sustained later by the Court of King's Bench at Quebec, the appeal court however being divided in their opinion. In favour of the opinion of the majority it was argued that the intention of the act was shown in the section providing for compensation in cases of death. This section fixes the maximum amount payable in such cases at \$3,000, besides medical and funeral expenses, but where the illness of the injured workman has been protracted, the medical expenses incurred prior to his decease while he was a "permanent disability" case, are deducted from the amount that becomes payable when death ensues. This is done because the legislation was evidently designed to limit the total compensation to \$3,000. This principle being observed in cases of death, it followed *a fortiori* that it should be observed in a case involving disability only. The minority judgment, on the other hand, held that in view of the provisions of articles 7322 and 7329, it was evident that the injured workman was entitled to demand payment of compensation for temporary total incapacity, but that when the extent of his permanent incapacity was established later, he could make full claim for the capitalized "rent" due to him for his degree of permanent incapacity.

(Quebec—*Labonne versus St-Maurice Lumbar Company*.)

Workman's loss through accident not affected by subsequent wage reduction

A miner in Great Britain suffered injuries while at work and received full compensation. He partially recovered and on returning to work in a different employment received wages at a lower rate than formerly. Under the Act he was entitled to receive from the employer, in addition to his actual wages, a sum equal to half the difference between his former and present wages. The employer claimed, however, that as the former scale was reduced by an agreement made after the date of the accident, the new scale should be used as the basis for determining the extent of the workman's loss in earnings. A county court judge decided in favour of the employer, but when the workman appealed the appeal court ruled that no cognizance should have been taken of the agreement referred to.

Compensation for cancer caused by industrial accident

The Supreme Court of Minnesota recently decided that cancer which developed in an injury sustained by a worker in the course of his employment was compensable. The employee in this case was injured in the cheek by a fall of coal while unloading, requiring treatment for eighteen months when the wound was recognized as cancerous. He claimed compensation, which was granted by the State Workmen's Compensation Commission. The case was then taken to the Supreme Court on the ground that the award was not justified by the evidence, and that the cause of cancer is not generally known. On this point the court said "It is not for us to decide as a scientific fact that trauma causes cancer or that cancer is a medical mystery. The employee in the course of his employment suffered an injury upon his cheek, at a place previously free from blemish. Under constant care, it developed a malignant growth which was eventually diagnosed as cancer. The circumstance alone is pretty strong evidence that the injury was the proximate cause of the result, and would be quite convincing to the mind of a layman. There is no apparent break in the chain of causation. If the medical profession conceded that it did not know the cause of cancer, the connecting events between the cause and effect in this case might be sufficient to justify the conclusion that the injury was the legal cause, and that the result should be compensable."

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 25]

NOVEMBER, 1925

[NUMBER 11

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THE improved employment conditions in Canada that have been reported in the LABOUR GAZETTE in recent months were fairly well maintained during September, and in some industries further gains were made. A slight decrease in the number of placements effected during the month was reported by the Employment Service of Canada, due to the normal decline in the demand for harvest workers as compared with August, but as compared with September, 1924, there was an increase which amounted to more than 33 per cent. At the beginning of October the percentage of unemployment among members of trade unions was 5.7 as compared with percentages of 4.4 at the beginning of September and with 5.9 at the beginning of October, 1924. Reports received by the Dominion Bureau of Statistics from 5,923 employers in industries other than fishing and agriculture showed that they were employing 809,072 persons on October 1, an increase of 13,315 persons over the previous month. The employment index number, based on the numbers employed in January, 1920, as 100, stood at 98.3 on October 1, 1925, as compared with 96.6 on September 1, and with 93.9 on October 1, 1924.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.89 at the beginning of October as compared with \$10.81 for September; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, stood at 156.6 for October as compared with 156.5 for September; 157.0 for October, 1924; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak).

The time loss caused by industrial disputes was less in October than in the previous month or October, 1924. Ten disputes were in progress at some time during the month,

involving 714 employees, and causing a loss in working time of 12,065 days. Corresponding figures for September were as follows:— 14 disputes, involving 1,703 workpeople and 14,145 working days; and for October, 1924, seven disputes, 8,023 workpeople, and 127,763 working days.

Combines Investigation Act, 1923

As noted in the LABOUR GAZETTE for October (page 949), the first prosecution resulting from an investigation made under the authority of the Combines Investigation Act, 1923, was begun in the courts of British Columbia in connection with an alleged combine among fifty-three firms and individuals, members for the most part of the Nash organization in Canada, being brokers, jobbers and other dealers in fruits and vegetables. The Attorney-General for the Dominion and the Attorneys-General for the four Western Provinces which are affected by the operations of these companies, are co-operating in the conduct of the case, which opened before Mr. Justice D. A. McDonald at the fall assizes in Vancouver on September 30.

The charges brought before the court by Mr. J. C. McRuer, K.C., acting for the Crown, included six counts under the Combines Investigation Act in which the defendants were charged with having formed a combine operating to the detriment of the public through lessening competition and restraining trade in fruits and vegetables, and enhancing the prices of these products. Somewhat similar charges were based on Section 498 of the Criminal Code, and additional charges of theft, conspiracy to defraud the fruit grower and the public, and other offences, were laid under other sections of the Criminal Code, the Secret Commissions Act and the common law. A true bill was returned by the grand jury on October 1. On October 12, counsel for the defence moved to quash the indictment on the ground that the proper procedure had not been followed in instituting the prosecution. Argument was advanced against the constitutionality of the Combines Investigation Act, 1923, and of Section 498 of

the Criminal Code.* In view of the 1923 amendment to the Criminal Code by which the Crown has no appeal from the judgment of the court where judgment has been rendered against the Crown on a motion to quash or in case of acquittal, and since there were in the indictment charges substantially like those under the Combines Investigation Act, counsel for the Crown withdrew the charges preferred under that Act. Mr. Justice McDonald expressed his unwillingness to give a decision at that stage as to whether Section 498 of the Criminal Code was *ultra vires* of the Dominion Parliament, since there could be no appeal by the Crown from his judgment.

The court ruled that the defendant companies must plead in the court where the indictment had been found, and that trial could not be had without jury before a county court judge, as sought by the defence. On the refusal of the defendants to plead, the judge instructed that a plea of not guilty be entered, and the hearing of the indictment was placed at the end of the list of cases to come before the court.

**C.N.R.
Employees'
Board of
Adjustment No. 2**

Board of Adjustment No. 2 of the Canadian National Railways, described in the last issue of this GAZETTE, was the outcome of an agreement between the Railways and the Canadian Brotherhood of Railway Employees. The employees who will benefit by the new Board are the clerks and other employees named in the schedule of rules governing these classes contained in the existing agreement between the Railways and the Brotherhood. The occupations referred to include the clerks and other office and station

employees such as station masters, ticket clerks, baggage trans-shippers, mailroom sorters, freight foremen, weighmen, mailroom clerks, shop, round-house, storehouse and warehouse employees, such as contract work checkers, clerk-storemen, etc. Certain other classified employees in and around stations, shops, round-houses, storehouses and warehouses are also included.

This list of the classes coming under the Board does not however include the blacksmiths, boilermakers, machinists or other crafts. These crafts were erroneously mentioned in the LABOUR GAZETTE for October in connection with the new Board. Provision for the adjustment of grievances and disputes arising among the members of the various crafts is made under the existing agreement between the Canadian railways and Division No. 4, Railway Employees' Department of the American Federation of Labour, which include the blacksmiths, boilermakers, machinists and other crafts in the locomotive and car departments. The latter agreement provides for dealing with all grievances and disputes which cannot be adjudicated directly by the railway officials and the employees' representatives concerned, the procedure being somewhat similar to that which is followed by the Canadian Railway Board of Adjustment No. 1. The arrangement has operated successfully for several years to the benefit of both management and employees.

At the inaugural meeting of the Board held at Montreal on September 30, Mr. J. F. Aitchison was elected chairman, Mr. A. R. Mosher, vice-chairman and Mr. J. A. Bérubé, chief clerk to chief of wage bureau, Canadian National Railways, was appointed secretary.

***Revised Statutes of Canada, 1906, Chapter 146.—**

498. Every one is guilty of an indictable offence and liable to a penalty not exceeding four thousand dollars and not less than two hundred dollars, or two years' imprisonment, or, if a corporation, is liable to a penalty not exceeding ten thousand dollars and not less than one thousand dollars, who conspires, combines, agrees or arranges with any other person, or with any railway, steamship, steam boat or transportation company,—

(a) to unduly limit the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any article or commodity which may be a subject of trade or commerce; or,

(b) to restrain or injure trade or commerce in relation to any such article or commodity; or,

(c) to unduly prevent, limit, or lessen the manufacture or production of such article or commodity, or to unreasonably enhance the price thereof; or,

(d) to unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply of any such article or commodity, or in the price of insurance upon person or property.

(2) Nothing in this section shall be construed to apply to combinations of workmen or employees for their own reasonable protection as such workmen or employees.

**Weekly rest
for fire fighters**

The Interprovincial Association of Fire Fighters (Alberta and Saskatchewan), at their first convention reported on another page of this issue, passed a resolution favouring provincial legislation to secure one day's rest in seven and the double-platoon system for fire brigades. It may be noted that the Alberta legislature passed in 1924 a "Fire Departments' Hours of Labour Act" to provide for the granting to fire fighters of one full day's rest in seven, subject to ratification by a vote of the electors taken at a municipal election. The act was amended in 1925 so as to require that a local by-law must first be submitted to a vote of the electors upon receipt of a petition to that effect, signed by at least ten per cent of the electors who voted at the last preceding municipal election.

The legislature of Ontario passed the "Fire Department's Two-Platoon Act" in 1921

(chapter 80) and the Fire Departments' Hours of Labour Act in 1920 (chapter 88). Similar measures were enacted in British Columbia in 1923 (chapters 14 and 15), to apply to the five chief municipalities in the province.

A.F. of L. approves C.N.R. co-operation plan

The American Federation of Labour, as noted in the report of the annual convention on another page, has expressed its approval of the new co-operation plan of management on the Canadian National Railways. A note in the September issue recorded the progress made up to that date in the adoption of the plan in the shops on the system. The Point St. Charles shops at Montreal joined the movement during October, and the "Baltimore and Ohio" union-management plan is now established at Moncton, Stratford, London and Winnipeg (Transcona and Fort Rouge). Twenty-five thousand men employed in the maintenance-of-equipment departments of the Railways are participants. The success of the movement on the Canadian National system is attributed mainly to the organizing efforts of Captain O. S. Beyers, and Vice-president S. J. Hungerford, supported by the unions of the employees concerned. Captain Beyers left Montreal in October to undertake the introduction of the co-operation plan on the Chicago North Western Railroad. In an interview before his departure he enumerated some of the benefits that might be expected to result from the plan; the labour unions will be fully recognized and accorded constructive functions in the industry; steadier employment will be secured by a better apportionment of work; grievances and industrial problems will be dealt with by consultation; and the quality and quantity of products and service to the public will be improved. "In my judgment," he concluded, "the improvement in service and economy effected last year in the Canadian National Railways' operations was due in a large measure to improved *morale* of the employees and to a more complete co-operation."

New civic pension scheme of Toronto

The Toronto City Hall Employees' Association is reviving the discussion of a pension scheme for municipal employees, no action having been taken to give practical effect to the scheme that was drawn up in 1924. In the LABOUR GAZETTE for July, 1924, it was noted that the city council had adopted the report of a special committee approving certain principles in regard to pensions. A draft by-law was subsequently drawn up to

establish a pension fund, to which permanent employees would contribute 5 per cent of their salaries, the city contributing about \$30,000, while the amount of the benefit was based on the average yearly salary for the five consecutive years of highest salary. One-sixtieth of that amount, multiplied by the number of years of continuous service, was to give the amount of the annual allowance, on condition, however, that this amount should not be more than \$2,000 or less than \$624. The foregoing scheme was not proceeded with, owing to the public outlay involved. The plan now presented by the employees' association is on a more modest scale, providing for the payment of retiring pensions ranging in amount from \$750 to \$1,000 yearly. The Board of Control has been asked to hold a conference on this proposal.

Medical aid in Alberta

The Workmen's Compensation Board of Alberta during October issued Regulation No. 12 under the Workmen's Compensation Act (Accident Fund), providing that the fees or remuneration for medical aid furnished under the provisions of the Act "shall not be more than would be a proper and reasonable charge to the workman if he himself was paying the same."

Section 60 of the Act enables the Board to determine all questions as to the necessity, character and sufficiency of any medical aid and to fix the fees or charges, no action lying against the Board in respect to any medical aid provided. When the Board itself provides medical aid, or undertakes paying for such service, it has authority to fix the amount payable to the doctor. The Board also has power to contract with doctors, nurses, hospitals, etc., for any medical aid required. By an amendment of 1924, an injured workman may be permitted by the Board to select his own doctor.

Union Labour Life Insurance Company

The American Federation of Labour at its annual convention in 1923 authorized the appointment of a permanent committee on insurance, and Matthew Woll, vice-president of the American Federation of Labour and President Perkins of the Cigar Makers' International Union were named as a committee to investigate the question whether labour should enter the insurance field. This committee presented a favourable report at the 1924 convention, and the president was authorized to call a conference of trade unionists to consider the subject further. President Green accordingly summoned a conference to

meet at Washington, D.C., in July, 1925. This conference unanimously agreed upon a proposal for the formation of a trade union life insurance company. Strong criticism was made at the conference of the existing systems by which group insurance is provided by employers for the benefit of their employees:—

“Group insurance as now practised is not understood by the insured employee,” it was stated: “Most of them believe that they have permanent insurance at a very low, permanent cost, whereas in fact they have temporary, one year term insurance, written at premium rates which are liable to be increased at any time. The insurance for each individual at the group rates lasts only while they are employed as a member of the group. The purpose of this form of insurance is to benefit the employer by reducing his labour turnover and tying the employee to his employment. In a small portion of the cases, the employer pays the entire premium, which is a very low one and liable to be increased at any time. In most cases, the employee pays the larger portion of the premium. However, in several cases recently investigated it was found that the premium actually paid by the employer to the company was the same amount, and in one case a less amount, than was charged the employees therefor, although the statement was made to the employees that the employer paid the larger part of the premiums.”

The Union Labour Life Insurance Company will sell its insurance at premium rates consistent with safety and sound business principles and will give to the policy holders every possible saving. It will divide with its policy holders the savings which accrue in the business as at present conducted and the additional savings effected by the use of the machinery of existing trade union organizations for the conduct of its business, thus greatly lessening the actual cost of insurance to its policy holders.

On the general subject of insurance it was stated at the recent conference that “Life insurance is the most profitable business known. In proportion to the capital invested, it has returned to its owners a much larger percentage of profit than any other business. It is very closely held and capital stock of the companies is rarely offered for sale. The dividends paid by the companies to their stock owning holders have been large, but the accumulations of surplus belonging to stockholders has been even greater so that as an investment it is entirely safe and very profitable. Life insurance is controlled by a few.

While the remotest parts in our country contribute to it, the premiums paid by millions of policy holders find their way to Wall Street, where they furnish available capital for the extension and use of huge business enterprises. Life insurance is an exact science. Its operation is based upon the law of mortality, which is now definitely understood. With an understanding of this law and a large enough group of individual policy holders to secure a fair application of it, it is comparatively easy to fix and collect in advance premiums which will accumulate amounts sufficient to pay all losses as they occur.”

The action taken by the Cigar Makers' International Union in support of the proposed insurance company is reported on another page of this issue.

New wages policy of A. F. of L.

Considerable notice has been given in the press to the “new wages policy” adopted by the American Federation of Labour at the recent convention, reported on another page of this issue. The resolution embodying the new policy states that real wages, that is, the purchasing power of wages, should advance in proportion to the increasing power of industrial production. President Green, in an interview, explained the resolution as follows: “Every improvement in the methods of production in any industry,” he said, “lowers production costs and hence increases that industry's income. It may be new machinery which reduces the amount of hand labour necessary in the process of manufacture. The new machine may enable the worker to turn out twice as much with half the effort. Or it may be some improvement in the routine or administration of a shop which eliminates lost motion. An employee, as a result, may greatly increase his output per working day with even less fatigue than before. The big question is: who should get the increased income which these savings have made possible? Both justice to the individual worker and the economic health of the nation at large demand that labour share in the benefits with capital. Wages as well as profits should be increased and prices lowered, proportionately to the increases in industrial income.”

The press for the most part interprets this declaration as meaning that the activities of labour are now entering on a constructive phase, and that the purely militant stage is passing away. An article in the *New York Times* says “American labour enters a new epoch. The trade unions of this country have now officially rung down the curtain on irre-

sponsible warefare and militant antagonism and set the stage for collaboration with the employers of the nation in solving the problems of industry for their mutual advantage." *The New York Post*, on the contrary, finds "nothing sensational in the decision," and claims that the mine workers, in particular, have pursued this policy for many years, with the result that mine owners have been discouraged from installing labour-saving machinery.

The *New Republic* finds the adoption of the new wage policy the most significant action of the late convention, and a "long step ahead," as it indicates that labour is assuming "a creative rôle in society." If investigation shows that higher wages cannot be paid in a particular industry "the question is then in order—why not? And the attention of all is turned to remedial action. It is out of just such a process that agreements arise like that between the Baltimore and Ohio Railroad and its shopmen, in which both parties contract to co-operate in discovering and applying better productive methods, and to share fairly any gain registered. This line of action, if followed on a national scale, would lead to a piece by piece overhauling of our economic system by those who know it best and actually operate it. The results might be incalculably beneficial."

Co-operation and trade union movement

Mr. John Walker, of the United Mine Workers' Union, addressing the Upholsterers' International Union as delegate from the Illinois State Federation of Labour, spoke of his experience of co-operation as the ally of the trade union movement. "Wherever a country has a large, powerful, well-established co-operative movement, you will find the government much more sympathetic to the needs of the workers than in any other country, and you will find the trade union movement much stronger and more influential and the people more united politically and acting in a more intelligent way. At the same time there are greater dangers in the co-operative movement than there are in any other phase of the development of working class organizations. Unless you know what you are doing when you start a co-operative movement, you are more nearly sure of disaster than you are in any other phase of that movement.

"We have eighty-seven stores operating in this State now," he continued. "Some say that we failed in our great movement that we started about eight years ago. The mine workers put in \$600,000. I think they have saved \$60,000,000 in the cost of living, even with the failures that were made. There is

nothing that I know of in the State that will afford a trade union much more pleasure than to be able to visit one of those stores and particularly at a quarterly meeting when all the men and women attend like one big family, where they all have a better knowledge of our economic problems, and trust each other more than in any other phase of our movement."

Mr. Walker strongly recommended his hearers to begin with consumers' rather than producers' co-operation. "If we could start that kind of a consumers' co-operative movement within the upholsterers' union, whenever there was a strike on, the members could have a market to enable them to live, and they would be able to demonstrate their capacity. A co-operative movement means first the development of knowledge, then the development of capacity. Let me tell you it is a long, hard, rough road to travel. At the same time I believe it is the road we should travel and I have been doing my best for thirty years. I suppose I have paid in \$3,000 of my own money and put in 30 years' work without the payment of a penny, and I have got more abuse out of it than out of any work I ever did. At the same time, I got more pleasure and satisfaction out of it because I knew it was building from bed rock."

Fishing in Nova Scotia in 1925

The *Canadian Fisherman* of November reports that the recent fishing season of Lunenburg, Nova Scotia, has been exceptionally good.

"The fishing season of the Lunenburg banking fleet lasts six months, starting about the middle of March and ending about the middle of September, and is made up of three trips, the frozen baiting or first trip, the spring trip and the summer trip. This last trip is the longest, as the vessels leave Lunenburg on June 1 for the Grand Banks and do not return until the end of the fishing season. They run into Newfoundland ports every few weeks for bait, ice, etc. On the first trip the fleet landed 40,300 quintals and on the second trip 60,725 quintals. These catches were considered average, in fact they were a little better than the same catches of last year. It was however, on the summer trip that the vessels did so well and landed 155,950 quintals, which is about 66,000 quintals more than the corresponding catch of 1924. These fish are now in the hands of the fish curers, who are preparing them for market. The prices received so far this year by the fishermen were \$7.25 and \$7.15 respectively for the first two catches and \$8 for several cargoes of their summer catch.

"This successful season affects the industry in many ways, one of which is the increased activities in shipbuilding. Whereas the fleet of 1925 has 74 vessels, 10 more than in 1924, it is expected that there will be 20 more added to the fleet for 1926. While this will be very beneficial to the industry, pessimists are wondering where the crews will come from to man these vessels. The last few years, quite a number of the fishermen have come from Newfoundland. It is rumored however that the fishing industry in Newfoundland is looking up and some of the men will want to stay with their own fleet, especially as they find that the transportation charges to and from Newfoundland cut quite a slice out of their earnings.

"Fall fishing is not very popular with the Lunenburg fishermen and very few undertake the trip. This year seven vessels fitted out and went fall fishing and no doubt when they return, their fish will be sold green.

"All of the fish caught by the banking fleet are landed among fish-curers, or in the vernacular of the fishermen, 'Fish-makers,' who cure the fish, and when sold, deliver them to the exporters."

Workers' Educational Association of Ontario

The activities of the Workers' Educational Association of Ontario have been noted from time to time in the LABOUR GAZETTE since its establishment in 1918 (February, 1919, etc.) The Association is supported by the University of Toronto, which provides the tutors, and has the active approval of the Dominion Trades and Labour Council and other workers' organizations. The Workers' Educational Association, however, regulates all procedure, and controls the work. The object of the Association is to give workmen the privilege of gaining a higher or "cultural" education of the university type. Professor R. M. MacIvor, head of the Department of Political Science at the University of Toronto, and chairman of the Toronto Branch of the Association, in explaining its purposes, stated that higher education broadens the mind and brings a fuller enjoyment of life. "Technical education," he said, "is necessary to exist, but it must not be allowed to predominate."

The Association had an enrolment of 1,113 students at its last session, distributed among the branches of Brantford, Hamilton, Galt, Scarboro' Bluffs, Toronto, Ottawa and Windsor. Other schools will be organized at any centre in the province where twenty or more prospective students are organized.

The studies at the coming session will be

carried on in two sections. First, there will be the workers' introductory classes, a one-year course exclusively for workingmen and women, and second, tutorial classes, consisting of a three-year course, in which there will be no restriction whatever. The directors found that, were all sorts of wage-earners admitted to the tutorial classes, many of the members would be under a serious handicap. It is thought that any one who has taken the introductory class work and wishes to continue the three-year course in the tutorial department will have advanced far enough to enable him to take his place with class members from all walks in life.

The subjects to be taken up cover a wide field, the more important being: Economics, including a consideration of what determines prices, wages, interest, rent and profit, and what conditions have created the present large-scale production of industry and its distribution; public speaking; Canadian and British history; civics, a study of government and citizenship; industry psychology; English literature, the drama, sociology, journalism; zoology, and other subjects.

Training the unemployed for farm work

Reference has been made in former issues of the LABOUR GAZETTE to a recent movement in Great Britain in the direction of supervising prospective emigrants to the Dominions. Particulars are now available of a scheme promoted by the British Government for the training of young unemployed men for farm work. One of the four residential training centres will be at Claydon, near Ipswich, and those accepted will be trained either for farm work in England or overseas. A start is being made with about 1,200 men, of whom 200 will be slated for overseas.

Applicants for training with a view to employment overseas must be:—(a) provisionally approved by a representative of the Dominion authority, and must, before entering training, sign an undertaking to remain throughout the course, and, as soon as possible thereafter, to proceed to the Dominion concerned, if finally approved for employment there; (b) single men between the ages of 19 and 25. For men who served with the forces during the great war, the upper age limit may be raised to the extent of such service, up to the age of 29; (c) unskilled, i.e., men who have had no opportunity of learning a skilled trade; (d) must not have received a course of training at public expense or financial assistance from the civil liabilities or king's funds.

The precise nature of the course of training for overseas employment may be varied from time to time, but it is intended generally, to give training in: (a) The handling of horses, including ploughing and care of live stock, elementary repairs to harness; (b) milking; (c) simple agricultural operations; (d) elementary wood-work, the use of simple wood-working tools such as plane, chisel, saw, cross-cut mauls, wedges, axe and hill-hook; (e) the erection and repair of wire fencing and wooden hutments, and where necessary; (f) timber felling, and (g) simple repairs to farm implements.

Mr. J. Bruce Walker, whose appointment as Director of European emigration for Canada was noted in the last issue of the Gazette, in a recent issue of *The Times* said: "I feel there is an opportunity for a wider movement by which people, physically capable, and unable to find suitable employment, might be trained in the first principles of agriculture which are essential in Canada."

Referring to emigration from Europe to the Dominion at the present time, he said there was not an unreasonable proportion of foreign emigrants going to Canada. He believed that the ratio of foreigners to British to-day was not so formidable as it was before the war. He hoped to see greater advantage taken of the overseas settlement scheme. He thought Canada could absorb from 20,000 to 25,000 agricultural labourers annually.

Canada Colonization Association

Mr. Ralph C. Duncan, assistant manager of the Canada Colonization Society, states that up to the end of its

fiscal year, May 31, 1925, the Association placed 633 families on lands purchased by these families, the total area involving over 185,000 acres in the three Western Prairie Provinces. The majority of these lands have been sold, not to individual settlers but to groups of settlers, who agree to sign a joint and several contract and pool the proceeds of the sale of grain and farm produce until such times as the lands are paid for. Then a division is made (which is an internal arrangement made amongst themselves) as to the individual ownership of each parcel. This adjustment is based on location of buildings, cultivated area and area of arable land not under cultivation.

Ninety per cent of these 633 families have been sold land, partially or fully improved with stock and equipment, seed and feed, without a cash payment, and the purchase price to be paid under crop payment, which means half of the entire proceeds of the farm, including grain, livestock, produce and live

stock increase. The interest rate has been from 5 to 6 per cent, but never over 6 per cent.

The Association has been able to secure these lands from owners of large farms of from 1,000 acres to as high as 14,000 acres, where the owners are better able to finance such a proposition than to farm the land economically, in view of the labour situation. While this may mean the displacement of one farmer, the records show that for every farmer displaced nine are put in his stead, and usually on these farms the one man is a forerunner employing transient help.

Recent changes in compensation laws in the United States

A comparison of the various State Workmen's Compensation laws in the United States in the last five years shows the direction of recent progress in this class of

legislation. A chart covering the principal features of compensation laws was prepared by the United States Bureau of Labour Statistics in 1919 and revised in 1925. There has been on the whole a common tendency towards more liberal provisions, but little progress has been made as yet in the direction of uniformity or common standards. Mr. O. F. McShane of Utah, the retiring president of the International Association of Industrial Accident Boards and Commissions, in summing up the changes in the laws of 1925 as compared with those of 1919, states that in the interval between these dates all the States except three had amended their laws and in two States new legislation had superseded the earlier laws. Among the outstanding changes that may be noted were the reduction of waiting time, increases in compensation benefits, and liberalisation in regard to medical aid. There were also some extensions of inclusion or coverage, either by way of specific inclusion, or by lowering the number of workmen necessary for inclusion under the act. In 1920, sixteen States provided for the payment of \$12 or less as a maximum weekly amount; in 1925 no State had less than \$12 as a maximum for temporary total disability, and only six had so low a standard; in 1925, twelve provided for a maximum of \$18 or more as against five at the beginning of 1920. [The waiting time is now less than one week in eight jurisdictions, one week in twenty-eight, and more than one week in ten; in 1920 only four laws fixed a waiting period of less than one week while twenty provided for a longer period, twenty-two making one week the required waiting time. Two States in which insurance had not been required amended their laws so as to make it obligatory.

How to reduce cost of compensation

Dr. James A. Hamilton, the Industrial Commissioner of New York State, in a recent pamphlet entitled "The Cost of Workmen's Compensation" points out that for 72,983 compensable accidents in the State in 1924, the cost of compensation was \$70,000,000. There was moreover a net loss to injured employees of \$24,000,000, which was not made good to them by the compensation law. The remaining cost was borne by the employers and by society in general, \$16,000,000 going to administration expenses. The cost of compensation has increased steadily since 1916 for three reasons; first, more occupations are now covered; second, the level of wages has risen; and third, more liberal standards than formerly are now followed. Dr. Hamilton believes that the only way to reduce the cost of compensation is to reduce the number of accidents. "Efficiency in accident prevention must at least equal production and selling efficiency in industry." Consequently the procedure to be followed is "not by fighting to reduce awards, but by going about it to help employers to reduce accidents."

Organizations for study of human factor in industry

Mr. D. R. Wilson, Secretary of the Industrial Fatigue Research Board of Great Britain, recently visited the United States in order to compare the standing of the two countries in regard to the organized study of the human factor in industry. Some of the results of his observations are published in the *Journal of Industrial Hygiene*, the official publication of the American Association of Industrial Physicians. He found that America is in advance of England in two respects; first, in the co-operation of the engineer and technician with the physiologist; and second in the extent to which employers and employees combine for some specific object. On the railroads and in the clothing, building and printing industries inquiries on different subjects are proceeding under the joint auspices of the employers and the workers, and the results of these inquiries cannot fail to be of the greatest national benefit. However in regard to the general organization of this work Mr. Wilson found that the United States was not in advance of Great Britain. Certain contributions to research are made by the more progressive manufacturers in both countries, but the proportion in America is less than in England. A large part of the research work in America is of high scientific value, but much of it he considers inferior, as the large number of American journals

makes it easier for any author to have his word accepted for publication.

In England the scientific study of the human factor in industry is mainly in the hands of two organizations: (1) The Industrial Fatigue Research Board, financed almost wholly by the government, which studies particular industrial problems by means of factory investigation and laboratory research; (2) the National Institute of Industrial Psychology, a self-supporting organization, concerned with investigations into conditions in individual factories. It has lately initiated an extensive study of methods by vocational selection.

In the United States no government body like the Industrial Fatigue Research Board has existed since the disbandment of the Committee on Industrial Fatigue of the Council of National Defense. However, physiological research of direct importance to industry is being carried out by the officers of the United States Public Health Service, both in the Hygienic Laboratory at Washington and at other centres; moreover, in the Department of Labour the Commissioner for Industrial Statistics publishes a monthly bulletin which frequently contains valuable information relating to hours of work, accidents, etc.

The absence of any federal body is attributed by Mr. Wilson to the existence of The National Research Council, which was established in 1916 by the National Academy of Sciences at the request of the President of the United States, for special researches into war problems. This Council was in 1918 reconstituted as a permanent body, its aims being to promote scientific research. Its finances are derived from large foundations such as the Carnegie Corporation and the Rockefeller Foundation. Other American organizations having similar objects include the following: The Taylor Society; the Personnel Research Federation, founded in 1921 to co-ordinate the work of existing agencies; the National Industrial Conference Board, founded in 1916 as a confederation of American industries to carry out investigations mainly on economic lines. Valuable hygienic studies are also conducted in several American universities.

Economic and Wage Commission in South Africa

The appointment of a committee to inquire into the cost of living in the Union of South Africa was noted in the August issue of the LABOUR GAZETTE (page 758). Another commission has since been named to inquire into and report upon wages in the Union and to consider the effect of different wage and labour policies upon opportunities

of employment at a wage compatible with a civilized standard of life with particular reference to:—

1. The range of wages rates and earnings in the Union;
2. The differentiation of wage rates according to age, sex, experience, responsibility and skill, and also according to special conditions and terms of service imposed by law;
3. The procedure by which wage rates are settled;
4. The relation of money wages to real wages and the adjustment of money wages to variations in the cost of living;
5. The industrial and commercial conditions affecting the amount of wages;
6. The effect of wage standards upon the distribution of labour between different occupations;
7. The influence of public wage regulation upon industrial development; and
8. The need for wider scope for the youth of the country and the effect of the existing conditions in South Africa upon their opportunities of entry into and training in industrial employment.

Over-production and unemployment

The Honourable James J. Davis, United States Secretary of Labour, suggested in a recent address (reproduced in the *Monthly Labour Review* for October, 1925), that employment conditions might be rendered more stable by a system of State regulation of production and prices. "Nothing worries a workman," he said, "so much as that ever-present dread of losing his job; that ever-haunting fear of a lay-off for an indefinite period which may come, and generally does come, right at the time when he is least prepared or able to stand it. A man may be perfectly secure in his job—that is to say, have no fear of discharge—and his relations with his employer may be perfectly good, but this gives him no protection from a lay-off. He is not able to keep his employment when the employer cannot sell the product of his labour. The greatest source of unemployment in this country is the over-development of industry. The fact is that our productive machinery and equipment cannot run 300 days in the year without producing a stock so large that it cannot all be sold in this country or in any or all other countries."

After showing that unregulated production is the cause of unemployment in the boot and shoe, flour and coal-mining industries, the Secretary of Labour proceeded:—

"Let us for a moment discuss the question of remedy. What I want is some way by which the 84 mines in Illinois, or whatever number of mines is necessary to produce the

coal that is needed from Illinois, can be operated with the necessary number of men 300 days in a year; that the cost of operating unnecessary mines shall be stopped; that the practice of scattering the workers in industry over nearly five times the number of plants necessary to produce the required amount of coal, and thereby giving less work than a man can live upon at any sort of wage, shall be stopped. If this cannot be permitted under existing law, then let us have a law under which it can be permitted.

"Now, the coal industry in Illinois cannot support 338 mines upon any basis of full-time work. The law says you must not restrict output, but the economic law restricts output to the amount which can be sold. The people would not be injured by any such legal merger or industrial restriction unless and until, notwithstanding a decreased cost of administration, price increases are enforced or attempted to be enforced. A law which would leave an industry free to make any sort of combination or absorption found economical, but which at the same time would make it perfectly clear that industries operating under said law must keep their prices reasonable, or submit to such court action as would make their prices reasonable, would in my judgment go a long way toward remedying this over-development problem which is becoming more and more serious every day."

The Trades and Labour Council of Edmonton, Alberta, recently sent out a circular letter to trade unions throughout Canada, pointing out that numerous industrial accidents are never reported either to the government or even to the employers, on account of their apparent insignificance, but that many of these accidents nevertheless have serious results, such as blood poisoning, for which, as such accidents are not reported, the worker receives no compensation. It is suggested that the existing laws should be amended so as to require notification regarding all accidents, however trivial.

The chairman of the transport committee of the Liverpool Chamber of Commerce recently informed the Chamber that in his opinion it would be of advantage to the empire if the Government allowed Canada, Australia, New Zealand and other dominions from £200,000,000 to £300,000,000 free of interest for five years with the provision that the money should be repaid at the end of that period with five per cent interest, and a further five per cent as a redemption fee, practically amounting to about two per cent interest per year.

The City Council of Windsor, Ontario, voted in October to establish the following graduated salary schedule for the female office clerks and stenographers employed by the municipality, effective from November 1: Temporary help, \$65 per month; first year, permanent, \$65 per month; second year, permanent, \$75 per month; third year, permanent, \$85 per month.

The *Pulp and Paper Magazine* quotes Mr. C. G. Piche, chief forester of the Province of Quebec, as estimating that between 20,000 and 25,000 men will engage in work in the provincial forests during the coming winter, the latter figure being about the number required for an average yield of timber. The chief forester referred to the legislation passed last year restricting the cut to a certain percentage of the new growth of timber. This restriction was a wise move, in his estimation; for, whereas those operating the cut could previously use up all the forest, as long as they cut within the limit as regards size, the restrictions now in force would assure only a certain percentage of the year's growth being cut down, which would tend towards reforestation in a much shorter period.

The City Council of New Westminster, B.C., has approved a proposal for the formation of a "metropolitan health board," whereby small local boards would be merged into one organization. If this idea should be adopted in Greater Vancouver, it would result in the amalgamation of ten existing boards.

The Workmen's Compensation Board awarded during the month of October, \$482,622.40 in benefits to injured workmen and their dependants, \$399,638.84 of this being for compensation and \$82,983.56 for medical aid. The accidents reported during the month numbered 5,761, of which 40 were fatal, as compared with 5,507 during September, of which 34 were fatal, the number of accidents reported during October being the highest for any month this year.

The United States Railroad Board recently issued an order awarding telegraph employees of the St. Louis Terminal Company one day's rest in fourteen, with time and one-half for work performed on the rest day. The *Weekly News Survey*, published by the American Federation of Labour, states that this order establishes a new precedent in working rules for this class of employment.

The Labour Council of New South Wales at Sydney is sending out invitations for a pan-Pacific Conference of political and industrial organizations to all countries bordering on the Pacific, to be held at Sydney, May 1, 1926. The Conference is to harmonize the relationships of the workers around the Pacific. It is stated that the Canadian Trades Union movement will be included amongst those to receive invitations to attend.

•Fred Bramley, M.P., secretary of the British Trades Union Congress since 1923, died suddenly on October 9 at Amsterdam, where he was attending a meeting of the executive of the International Federation of Trade Unions. The late Mr. Bramley was born in the Isle of Man in 1874, and served his apprenticeship as a cabinet maker. He was practically self educated, but was a recognized authority on economic subjects and contributed special articles on social questions to newspapers and magazines. He was successively organizing secretary of the Furnishing Trades Association; member of the Parliamentary Committee of the Trade Union Congress, and Assistant Secretary and Secretary of the same organization.

The British Ministry of Labour is making use of a factory at Birmingham, once used for the industrial training of ex-service men, for the purpose of giving young men in receipt of the dole instruction in rudimentary factory operations.

The Massachusetts Society for Mental Hygiene announces the issue of a new bulletin called "The Human Factor," which should appeal strongly to employers, personnel workers, educators in stores or factories, management executives, employment managers, physicians, and all others who are in any way concerned with the human factor in business or industry. It will be written in non-technical language, and will seek to bring the principles of mental hygiene into the everyday life of business and industrial institutions and to make definite contributions to the health and happiness of workers.

The Southern Railway Company, of England, has invited its employees to participate in a special issue of £3,000,000 of five per cent debentures at the selling price of 99 per cent. The stock is to be sold in amounts of £50 or multiples of £50. This is stated to be the first offer of the kind by a British railway company.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

EMPLOYMENT in industries other than agriculture and fishing showed a further upward movement at the beginning of October, the gains greatly exceeding those recorded at the same time of last year, when the situation was less favourable.

The employment situation, as reported by the local superintendents of the Employment Service of Canada at the end of October, was as follows:—

From the Province of Nova Scotia it was stated that stormy weather was seriously interfering with the fishing industry. Farming activity for the season had considerably decreased, and no demand for farm help was reported. While the logging industry held forth fair prospects for the coming winter not much present activity was apparent. In the mining industry fairly full time was being worked and a normal output of coal was reported. The iron and steel industry showed a reasonable amount of activity and was materially improved over its condition of some little time ago. The construction industry was quiet. The transportation of freight was stated by the carriers to be fair.

Stormy weather in New Brunswick had interrupted most outdoor work, such as fishing and construction. Manufacturing was reported as good, with most firms working full time. The logging industry showed its usual activity at this season of the year. The transportation of freight reflected general conditions as being favourable.

General conditions in the Province of Quebec were satisfactory. Although the season was advancing, the construction industry, particularly in the City of Montreal, was busy, and most tradesmen were reported as employed. There was a demand for labourers for this industry, which was not usual at this time of year. Municipal work, such as street and sewer work, showed a slackening. The lumber industry was engaging a number of men. Improvement in the textile industry, particularly in Sherbrooke, was reported. The metal trades showed no change, however. In Quebec some overtime was being worked in the confectionery and fur and clothing industries.

Throughout the Province of Ontario demands for farm hands for fall and winter work were prevalent. In the central and southern portions of the Province factories were slightly increasing staffs in some districts and it appeared that the earlier gains in the manufacturing industry were being well maintained, the situation

generally speaking appearing favourable from an employment point of view. In view of the advancing of the season the construction industry including municipal work, showed decreased activity, although there was the usual autumn demand for workers required to complete jobs before winter. From the northern section of the Province reports indicated a steady demand for bushmen, many of whom were being placed each day, with temporary shortages of competent workers obtaining in some centres. Employment conditions throughout this province on the whole appeared favourable for this season of the year.

Unseasonable weather was holding up threshing in the Province of Manitoba, and some threshing remained unfinished as a result. The demand for farm hands for winter work showed a steady increase and little or no difficulty was being experienced in filling orders. Several bushmen had been directed to jobs in Ontario and some to work in Northern Manitoba. Despite the bad weather the construction industry showed fair activity, particularly in Winnipeg.

Demands for farm workers in Saskatchewan recorded the usual decrease customary during October. Some threshing at different points in the Province remained to be finished. Demands for farm hands for winter work were on the increase, with a surplus of available applicants in some centres. From the northern section of the province activity in the logging industry was reported. The larger centres showed most building tradesmen busy. Throughout the province employment appeared as favourable as might be expected at this date.

Unfavourable weather in Alberta had delayed the fall farm work. Intermittent demands for threshers and some demands for winter farm hands were registered with the local employment offices. Increased demands from logging operators have absorbed a number of workers. Although outdoor work was seriously interfered with by inclement weather, railroad construction work continued briskly. The coal mines were operating steadily and in some cases were employing additional workers. Although applicants registered at the various offices were on the increase due to the approach of winter weather, conditions generally were considered as good.

In British Columbia the logging industry was fairly quiet, although some localities reported activity as increasing. Metal mining was steady, but with only a few workers

being taken on. Coal mining was likewise steady. The construction industry, which was reported as fair, was decreasing in volume, but not many idle tradesmen were as yet reported. The usual influx after the harvest from the Prairie Provinces was noticeable in different localities and tended to increase the number in search of work. However, general conditions were still rather favourable.

The trend of employment continued to be upward, according to reports from employers in industries exclusive of agriculture and fishing, received by the Dominion Bureau of Statistics at the beginning of October. The increase was much larger than that noted on October 1, 1924, when the index number was several points lower. An analysis of the returns by provinces shows that in the Maritime Provinces only were contractions indicated. In that district, manufacturing, logging and mining were decidedly more active, but construction showed a considerable falling off. In Quebec, general improvement was registered in manufacturing, logging, trade and shipping and stevedoring. On the other hand, communication was somewhat slacker. In Ontario, important increases took place in manufacturing and logging also recorded increased employment. Metallic ore mining, transportation and construction, however, were slacker. In the Prairie Provinces, iron and steel factories, coal mines, transportation and trade reported large additions to staffs, but services and construction registered curtailment in employment. The most pronounced change in the situation in British Columbia was a large increase in logging, while food factories, construction and services showed seasonal losses.

Employment increased in the eight cities for which separate tabulations are made, the gains in Montreal being most extensive. In Montreal, manufacturing, transportation, construction and trade afforded greatly increased employment. The only declines of any size were in communication. In Quebec, shipping and manufacturing absorbed more workers. In Toronto, factories registered heightened activity; communication, transportation and services were also busier, but construction and retail trade showed a slight falling off. In Ottawa, construction work increased and trade was also rather more active. Sawmills, however, reported seasonal curtailment. In Hamilton, manufacturing recorded the only pronounced change, an improvement. In Windsor, automobile factories reinstated a considerable number of workers, while construction workers were not quite as fully employed. In

Winnipeg, manufacturing and trade were slightly busier. In Vancouver, the gains took place chiefly in manufacturing and construction.

The greatest improvement at the beginning of October was in the manufacturing industries; iron and steel, vegetable food, textile, electrical apparatus, boot and shoe, musical instrument, rubber and non-ferrous metal product factories registered important gains. Seasonal contractions were recorded, however, in lumber mills and fish canning and preserving establishments; there were also losses in electric current plants. Logging, coal-mining, transportation and trade afforded considerably increased employment. On the other hand, highway and railway construction, hotels and restaurants and metallic ore mines released employees, the decreases being due to seasonal causes.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of October, 1925.

TRADE UNION REPORTS

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The volume of unemployment among local trade unions at the end of September was somewhat greater than at the close of the previous month, as shown by reports tabulated from 1,517 organizations with a total membership of 148,161 persons. Of these 8,374, or a percentage of 5.7, were unemployed, as compared with percentages of 4.4 in August and with 5.9 in September of last year. Quebec with a reduction in employment of nearly 5 per cent was practically the determining factor in the adverse situation reported at the end of the month, which was due to the inter-season dullness in the garment trades. The province of British Columbia also reported a decline which was however of much lesser degree than that in Quebec. In the remaining provinces the increases were slight. In comparison with September of last year, New Brunswick, Quebec and British Columbia registered more unemployment and in the other provinces

improvement was reported. Employment in the manufacturing industries declined as compared with August, due, as previously mentioned, to the situation in Quebec among garment workers. Cigar makers, wood, and textile workers and hat and cap makers also registered slight contractions. Glass workers were considerably better employed and metal polishers, iron and steel workers and printing tradesmen also reported gains. Coal miners in Nova Scotia and Alberta were slightly less active. In the British Columbia coal mines, the quarries of Nova Scotia, and the asbestos mines of Quebec no members were reported out of work. The situation in the building group, as shown by reports tabulated

from 161 locals with a membership of 15,852 persons, was less favourable than in August, 10.5 per cent of the members being idle as compared with 6.1 per cent in August. However, conditions were better than in September of last year, when 11.9 per cent of the members were out of work. Bricklayers, masons and plasterers and granite and stone cutters were considerably less active than in August, and reductions were also indicated among bridge and structural iron workers, carpenters and joiners, painters, decorators and paperhangers, tile layers, lathers and roofers and hod carriers and building labourers. Of the increases in the remaining trades that of over 4 per cent for plumbers was the most

* Figures for end of previous months. † Bradstreet. ‡ MacLean Building Review. § For group figures see articles elsewhere in this issue. ** Figures for four weeks ending October 31, 1925 and corresponding previous periods.

substantial. More employment than in August was registered in the transportation group, due to increases in both the navigation and steam railway divisions. Street and electric railway employees, however, reported a minor reduction. More favourable conditions also prevailed in the transportation group than in September of last year, when 3.2 per cent of the members were idle. Retail shop clerks, hotel and restaurant employees and stationary engineers and firemen were all more fully engaged than in August, but theatre and stage employees and barbers were slightly less active. Fishermen reported no unemployment. Lumber workers and loggers were quite slack.

EMPLOYMENT OFFICE REPORTS

During the month of September, 1925, the offices of the Employment Service of Canada made 70,241 references to positions and effected a total of 68,637 placements; of these the placements in regular employment were 58,204, of which 54,248 were of men and 3,956 of women. The placements in casual work numbered 10,433. Vacancies reported to the Service numbered 75,312, of which 64,746 were for men and 10,566 for women. Applications for work were received at the offices from 66,141 men and 11,295 women, a total of 77,436. A slight reduction is noted in the volume of business transacted when the above figures are compared with those of the preceding month but an increase is shown in the records compared with those of September of last year. The reports for August, 1925, showed 81,886 vacancies offered, 83,777 applications made and 75,887 placements effected; while in September, 1924, there were recorded 65,709 vacancies, 62,465 applications for work, and 51,621 placements in regular and casual employment. In another section of this issue may be found a detailed report of the work of the offices for September, 1925, and for the quarterly period July to September of the current year.

PRODUCTION IN CERTAIN INDUSTRIES

Some figures indicating the movement of trade and industry in October and in previous months are given in the table on page 1065.

The Dominion Bureau of Statistics reports that the production of pig iron in Canada in September was 34,609 tons, or 31 per cent over the 26,513 tons produced in August, which in turn marked an advance of 27 per cent over the July figures. Sharp declines were noted in the foundry and malleable grades but this loss was more than offset by

the increased tonnage of basic iron made for the further use of the producing firms. At 25,579 tons this grade marked a three-fold advance over the 5,308 tons made in the preceding month. Foundry iron at 9,030 tons was well under the 16,596 tons of August. No malleable iron was reported for September as against the August output of 4,609 tons.

For the nine months ending the third quarter of this year, the average monthly production was about 42,000 tons as compared with an average of 58,000 tons per month during the same period of last year; the total tonnages for the period were 372,960 tons in 1925 and 518,860 tons in 1924. This year's output consisted of 283,430 tons of basic iron, 65,039 tons of foundry iron and 24,491 tons of malleable iron.

Blast furnace charges in September consisted of 65,114 long tons of imported ore, 39,418 short tons of coke and 18,092 short tons of limestone. For the nine months the total furnace charges comprised 6,098 long tons of Canadian ore, 680,087 long tons of imported ore, 413,797 short tons of coke and 205,835 short tons of limestone.

During the month one additional furnace was blown in at Sydney, N.S., and one at Sault Ste. Marie, Ont., resulting in five furnaces being in blast on September 30. The active furnaces had a daily capacity of 2,125 tons or about 42 per cent of the total capacity of all the furnaces in the Dominion and were located as follows: two at Sydney, N.S., two at Sault Ste. Marie, Ont., and one at Hamilton, Ont.

Ferro-alloys at 2,046 tons showed little change from the 2,095 tons of August and were mostly of the grade having a high manganese content. Small quantities of ferro-silicon were also produced.

Steel ingots and castings in Canada advanced to 37,094 tons in September, an increase of 48 per cent over the 25,007 tons of August. Compared with the previous month direct steel castings at 1,261 tons marked a slight falling off from 1,422 tons, while steel ingots rose 52 per cent to 35,833 tons as against 23,585 tons in the preceding month.

For the nine months ending September, the cumulative production was 508,269 tons or 13 per cent under the 581,711 tons reported for the same period of last year. To date this year all of the ingots and 7 per cent of the direct castings were made for the further use of the producing firms.

Pig iron prices showed no change in September as compared with August, No. 1 foundry at Toronto still being quoted at \$25.35, No. 2 foundry at \$24.85 and both

grades at Montreal at \$27.25 per ton. Basic pig iron at mill remained at \$21. The Bureau's index number for iron and its products (1913 prices=100) remained practically stationary at 149.9 as compared with 149.3 in August.

In the United States, coke pig iron was produced at the rate of 90,873 tons per day in September as compared with the daily rate of 87,241 tons in August. This was an increase of 4.2 per cent over August, which in turn showed an advance of 1.5 per cent over the previous month. During September, 11 furnaces were blown in and 3 blown out or banked resulting in a net gain of 8 active furnaces.

Full statistics of coal production during September are not yet available. The output of coal from Canadian mines during August was 31 per cent greater than the production for the preceding month, but was 19 per cent below the average for August in the past five years. The figures were 986,668 tons in August as against 746,972 tons in July, and an average for the month during the five preceding years of 1,209,318 tons.

Production in August showed a considerable gain over July in Nova Scotia and slight gains in Alberta and British Columbia, but slightly lower figures for Saskatchewan and New Brunswick than in the preceding month. Of the five coal-producing provinces, British Columbia was the only one which reported a greater output in August than its average tonnage for the month in the five preceding years. The total number of men employed in the coal mines of Canada during August was 22,654, of whom 16,841 worked underground and 5,813 on surface, as compared with a total of 14,702 in July, of whom 10,421 worked underground and 4,281 on surface. Production per man was 43.5 tons in August as against 50.6 tons per man in July. During August, the production per man-day was 2.2 tons, as compared with 2.3 tons in July. The tonnage lost (Table No. 5) was largely due to "lack of orders" and "other causes."

A report from the Department's correspondent at Cobalt, Ontario, shows that fifteen (15) cars containing approximately 1,199,183 pounds of silver ore were shipped from the Cobalt Camp during the month of October; this compares with fourteen (14) cars of silver ore containing 994,805 pounds shipped in the previous month.

The Nipissing Mines shipped 110 bars containing 125,631.05 ounces of silver, and The Mining Corporation of Canada shipped 321 bars containing 330,660.11 ounces, making a total of 431 bars containing 456,291.16 ounces of silver shipped during the month of

October. This compares with 240 bars containing 253,317.82 ounces shipped in the month of September.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, amounted to \$22,606,263 in September, 1925, as compared with \$19,311,459 in September, 1924. The gross earnings for the first nine months of the year are given as \$169,268,260, as compared with \$172,484,625, in the same period last year.

The gross earnings of the Canadian Pacific Railway Company as given in a preliminary statement, were \$18,909,071 in September, 1925 as compared with \$15,493,983 in September, 1924. The gross earnings for the first nine months of 1925, were \$124,674,088, as compared with \$129,358,698, in the first nine months of 1924.

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty cities during the month of September showed an increase of 7.2 per cent compared with the previous month. In comparison, however, with the same month last year, a decline of 33.3 per cent was shown. The total value for September, 1925, was \$9,927,968; for August, 1925, \$9,258,752, and for September, 1924, \$14,883,323.

The *Maclean Building Review* estimates the total value of the contracts awarded in October as \$29,647,500, as compared with \$29,746,400 in September, and \$21,066,800 in October, 1924. Of the contemplated new construction in Canada in October, 1925, \$9,071,900 was for residential building; \$10,007,600 for business building; \$1,321,300 for industrial building, and \$1,762,700 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). Contemplated new work in October aggregated \$22,163,500. The activity was distributed among the provinces as follows:—Ontario, 26.7 per cent; Quebec, 57.1 per cent; Prairie Provinces, 5.87 per cent; British Columbia, 8.5 per cent and Maritime Provinces, 1.9 per cent.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in September, 1925, the merchandise entered for consumption amounted to \$78,662,591 as compared with \$63,901,289 in September, 1924. The domestic merchandise exported amounted to \$108,497,911 in September, 1925, as compared with \$111,409,525 in August, and \$80,960,729 in September, 1924.

The chief imports in September, 1925, were: Iron and its products, \$15,596,761; fibres, textiles and textile products, \$14,521,642, and agricultural and vegetable products, mainly foods, \$10,108,968.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$34,285,215; wood, wood products and paper, \$26,810,072; animals and animal products, \$21,195,920. In the six months ending September, exports of agricultural and vegetable products, mainly foods, were valued at \$196,737,552, and wood, wood products and paper at, \$137,564,415.

Strikes and Lockouts

The time loss to industrial disputes in October was less than in either September, 1925, or October, 1924. There were in existence during the month 10 disputes, involving 714 employees, and resulting in a time loss of 12,065 working days, as compared with 14 disputes in September, involving 1,703 workpeople and resulting in a time loss of 14,145 working days. In October, 1924, there were recorded seven disputes, involving 8,023 workpeople and a loss of 127,763 working days. Three new strikes and lockouts commenced during October with a time loss of 1,649 working days. One of the strikes and lockouts commencing prior to October and two of the strikes and lockouts commencing during October, terminated during the month. At the end of the month, therefore, there were seven strikes and lockouts affecting 245 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices were somewhat higher than in September due mainly to seasonal advances in the prices of eggs, milk and butter. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.89 at the beginning of October as compared with \$10.81 for September; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. Besides the advances in the prices of eggs, milk and butter there were less important advances in the prices of veal, mutton, salt pork and bacon. The most important declines occurred in potatoes, flour, sirloin steak and bread with smaller declines in beans, evaporated apples, sugar,

tea and coffee. Including the cost of fuel and rent with that of foods the total budget averaged \$21.11 at the beginning of October as compared with \$21.02 for September; \$20.67 for October, 1924; \$21.16 for October, 1923; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics showed a slight advance to 156.6 for October as compared with 156.5 for September; 157.0 for October, 1924; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; and 256.7 for May, 1920 (the peak). In the grouping according to chief component material two of the eight main groups were higher, five were lower and one was unchanged. The Animals and their Products group and the Non-Ferrous Metals group both advanced, the former because of higher prices for butter, cheese, and eggs and the latter because of advances in the prices of tin and zinc. The groups which declined were: Vegetables and their Products due to lower prices for grains, flour and other milled products, bread and sugar; Textiles and Textile Products due to lower prices for raw cotton and cotton fabrics which more than offset the advances in wool, silk and jute; Iron and its Products due mainly to a decline in the prices of steel bars; Wood and Wood Products because of lower prices for spruce; and Non-Metallic Minerals due to a fall in glass prices. The Chemicals and Allied Products group was unchanged.

Municipal Taxes of Non-Resident Workmen

A tax is levied by some municipalities in the Province of Quebec on workmen coming from other municipalities to work within their boundaries. A conference was recently held in the City of Quebec with a view to promoting reciprocal action in this respect between the municipalities of Quebec, Levis, St. Romuald and Lauzon.

An agreement between the City of Quebec and the Quebec Railway, Light and Power Company, contained in an Act to amend the Charter of the City of Quebec (Statutes of 1925, Chapter 91, Schedule A) provides in Section 39: "The Company binds itself to employ, in the exploitation of the said Railways, persons residing and paying taxes in the City of Quebec, in preference to strangers."

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1925

THE number of strikes and lockouts during October was ten, as compared with 14 in September. The time loss for the month was less than in October, 1924, being 12,065 working days, as compared with 127,763 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
October, 1925.....	10	714	12,065
September, 1925.....	14	1,703	14,145
October, 1924.....	7	8,023	127,763

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 437 workpeople, were carried over from September. One of the strikes and lockouts commencing prior to October, and two of the strikes and lockouts commencing during October, terminated during the month. At the end of October, therefore, there were on record seven strikes and lockouts as follows:—clothing workers, Montreal; hat and cap makers, Toronto; fur workers, Montreal; fur workers, Toronto; printing compositors and stereotypers, Edmonton; moulders, Owen Sound, and upholsterers at Montreal.

The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet called them off. Information is available as to five such disputes, namely, moulders at Galt, commencing August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Hamilton, January 30, 1925; moulders at Sarnia, March 3, 1925, and street railway employees at St. John, N.B., June 29, 1921.

Of the disputes which began during October, one was for increased wages, shorter hours, recognition of the union and a signed agreement, another was for increased wages, while

the third was against alleged violation of agreement. Of the strikes and lockouts which terminated during October, one was in favour of employers, and two ended in a compromise.

The following notes give particulars in regard to certain disputes in addition to information given in the accompanying tabular statement.

CIGARMAKERS, MONTREAL, QUE.—In the strike of cigarmakers at Montreal, beginning March 24, 1925, the strikers have from time to time secured work elsewhere, and at the end of October none were receiving strike pay, but the union did not call off the strike.

CLOTHING WORKERS, MONTREAL, QUE.—The strike of clothing workers in a men's clothing factory, August 17, against an alleged violation of the provisions in an agreement and the adoption of "open shop" operations, was declared off by the union concerned on October 26. The employer had replaced the strikers and the workers failed to secure their demands.

CLOTHING WORKERS, MONTREAL, QUE.—A strike of clothing workers in a ladies' garment factory has been reported during October at Montreal over an alleged violation of an agreement. The employer was charged with giving only a day or two days' work to its inside people, and at the same time was sending out work to be made up in contractor shops. At the end of October no particulars as to date of commencement or number of employees involved, had been received in the Department.

FUR WORKERS, MONTREAL, QUE.—In connection with the strike of fur workers at Montreal commencing in April, 1925, pickets charged with intimidation in August were tried, and the case went to the jury early in November. As the jury disagreed the case will be heard again in February.

PRINTING COMPOSITORS AND STEREOTYPERS, EDMONTON, ALTA.—The strike of printing compositors and stereotypers which began at Edmonton on June 19, against a reduction in wages in violation of existing agreements was described in previous issues of the LABOUR GAZETTE, the paper having ceased publication on that date. During October it was announced that the newspaper had passed to a new proprietor and publication would be resumed but this did not occur during October, nor was any settlement of the dispute effected.

FURNITURE FACTORY EMPLOYEES, HANOVER, ONT.—A dispute involving 250 employees in eight furniture manufacturing establishments, occurred at Hanover on October 22, owing to a demand by two unions for a signed agree-

ment involving increased wages, shorter hours and recognition of the union. On the refusal of the employers the members of the unions voted on October 20, to strike if further negotiations failed. Three of the employers, on October 21, posted notices closing the factories but later on the same day posted notices that employees who gave up membership in the union might return to work and accept the previous conditions of employment. The unions then called out on strike all the employees and some 250 out of upwards of 500 came out. The Minister of Labour was requested to send the Departmental Fair

Wages Officer, and through his mediation a settlement was brought about, and work was resumed October 29, the employees returning to work without being required to give up membership in the unions.

RIVETERS, ESQUIMALT, B.C.—Twenty-seven riveters in the employ of one establishment went on strike at noon, October 9, for increased wages. Several conferences were held and finally through the mediation of the Departmental Fair Wages Officer, a compromise was effected whereby a slight increase was granted to some of the employees and work was resumed October 16.

STRIKES AND LOCKOUTS DURING OCTOBER, 1925.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to October, 1925.			
MANUFACTURING—			
<i>Tobacco and liquor:</i>			
Cigarmakers, Montreal, Que.....			Commenced March 24, against a reduction in wages. Information received indicates employment conditions no longer affected.
<i>Clothing, including knitted goods:</i>			
Clothing workers, Montreal, Que.	181	3,801	Commenced August 17, against alleged violation of agreement. Information received indicates this strike was called off by the union concerned October 26.
Hat and cap makers, Toronto, Ont.	10	270	Commenced June 16, for recognition of the union. Terminated.
<i>Fur and leather products, other than boots and shoes:</i>			
Fur workers, Montreal, Que..	200	5,400	Commenced April 1, failure to renew agreements and proposed substitution of individual agreements. Terminated.
Fur workers, Toronto, Ont....	1	27	Commenced February 20, for recognition of the union. Terminated.
<i>Printing and Publishing:</i>			
Printing compositors and stereotyper, Edmonton, Alta.	13	351	Commenced June 19, against reduction in wages. Terminated.
<i>Iron, steel and products:</i>			
Moulders, Owen Sound, Ont..	9	243	Commenced January 19, against a reduction in wages. Terminated.
<i>Miscellaneous:</i>			
Upholsterers, Montreal, Que..	12	324	Commenced June 27, for improved working conditions. Terminated.
CONSTRUCTION—			
<i>Buildings and structures:</i>			
Electrical workers, Vancouver, B.C.	11		Commenced September 9, for increased wages. Information received indicates employment conditions no longer affected.
(b) Strikes and lockouts commencing during October, 1925.			
MANUFACTURING—			
<i>Clothing, including knitted goods:</i>			
Clothing workers, Montreal, Que.			Commenced during October, against alleged violation of agreement. Terminated.
<i>Wood products:</i>			
Furniture factory employees, Hanover, Ont.	250	1,500	Commenced October 22, for a signed agreement involving increased wages, shorter hours and recognition of the unions. Settled through the mediation of the Department of Labour and work resumed October 29. Compromise.
CONSTRUCTION—			
<i>Shipbuilding:</i>			
Riveters, Esquimalt, B.C....	27	149	Commenced October 9, for increased wages. Settled through the mediation of the Department of Labour and work resumed October 16; compromise.

HOW THE FEDERAL OR DOMINION EMPLOYMENT SERVICE CAN CO-OPERATE WITH THE PROVINCIAL OR STATE EMPLOYMENT SERVICE

Paper read by Mr. R. A. Rigg, Director, Employment Service Branch, Department of Labour of Canada, at the thirteenth annual convention of the International Association of Public Employment Services, held in Rochester, N.Y., last September.

IN dealing with this subject the writer trusts that he may be pardoned for very substantially limiting his effort to one of outlining the system of co-operative activity which prevails in Canada. The motive for so doing is solely that of indicating by way of illustration in the realm of actual accomplishment how the responsibilities of our various governments for the organization and control of public employment services may be centralized and their activities co-ordinated.

The title of the subject suggests a problem which owes its origin to the functional responsibilities devolving upon federal, state and provincial governments in the United States and Canada. Under the terms of the constitutions of our respective countries the powers of government are divided, the federal government possessing authority in certain fields, while others come within the jurisdiction of state or provincial governments. While the powers vested in the Federal and State Governments of the United States, relative to jurisdictional control in matters affecting the establishment and operation of employment offices, may not be identical in detail with those possessed by the Federal and Provincial Governments of Canada, they are, at least in practice, sufficiently alike to permit of the differences being ignored for our present purpose.

Under the terms of the British North America Act, which is the title of Canada's written constitution, the authority for the establishment and regulation of employment offices is vested in the provincial governments. The degree to which this is acknowledged may be illustrated by reference to a situation which developed when the Employment Service of Canada was organized.

Employment Service of Canada

This organization owes its origin to a federal measure entitled the Employment Offices' Co-ordination Act, "an Act to aid and encourage the organization and co-ordination of employment offices," which received the Royal Assent on May 24, 1918. In accordance with the terms of this legislation, an annual agreement is entered into between the Federal Department of Labour and the provincial governments consenting thereto. Among other

things, this agreement determines the financial contribution which the federal government shall make to provincial governments for the purpose of assisting in the maintenance of government employment offices, co-ordinates the activities of all the offices of the Service, ensures uniformity of procedure, and gives to the Federal Department of Labour authority to inspect and supervise.

The Service began to function early in the year 1919 with six of the nine provinces co-operating as contracting parties. The three provinces with whom at that time the federal government could not secure agreements were those of Nova Scotia, New Brunswick and Prince Edward Island, commonly known as the Maritime Provinces. By virtue of the powers bequeathed by the constitution of Canada, the Canadian parliament had in the early stages of the World War passed a measure known as the War Measures Act. Under the terms of this Act, the government of Canada acquired enormously wider powers than were possessed by it in times of peace, some of which during normal periods were possessed exclusively by the governments of the provinces.

When the Employment Service of Canada got underway, Canada was confronted with huge post-war problems. These included the re-absorption into civilian life and remunerative employment of her army of half a million men, and the rapid transformation of her industrial organization from a four and a quarter years' war footing to a peace establishment. Believing that a co-ordinated, nation-wide system of government employment offices would be of assistance in this pressing situation, the Federal Government exercised the authority acquired through the War Measures Act, and established and operated employment offices in the Maritime Provinces as a part of the Employment Service of Canada. The Act lapsed on April 30, 1920, and as the power to continue these offices went with it, the Federal Government was obliged to retire from the field.

Co-ordination of Service

From the foregoing it will be seen that each provincial government could have set up within its own boundaries a system of government employment offices. As a matter of fact, some

of these governments had actually taken this step. Obviously, each system might have adopted forms and methods of procedure and statistical compilation different from the rest, and under such circumstances it would have been difficult to make provision for interprovincial clearance facilities. These errors have been obviated or eliminated by the institution of the Employment Service of Canada. To-day all the provincial governments of Canada, with the exception of the small maritime province of Prince Edward Island, have established free public employment offices, and maintain them in operation. The system comprises a chain of offices, located in sixty-five centres of chief industrial importance, stretching across the Dominion from the Atlantic to the Pacific. All the forms, some thirty in number, necessary for use in these offices, are supplied free of cost by the Federal Department of Labour and are uniform for all offices. These include a report form which is daily completed and mailed to an interprovincial clearing house, two of which are maintained by the Federal Department of Labour, one for Eastern Canada in Ottawa, and the other for Western Canada in Winnipeg. The form contains necessary details concerning every applicant registered for work, every vacancy notified, and every placement made during the day. From these uniform reports the office records of the entire system are tabulated and compiled by means of the Hollerith system, thus ensuring the maximum degree of accuracy.

For the instruction and guidance of the staffs of the various offices, and to further assist in securing uniformity of method in each office, the Federal Department of Labour has prepared and issued a Manual of Procedure, which explains in detail the proper use of each form.

Interprovincial Transfers

Incidental reference has previously been made to interprovincial clearance of labour. While the United States and Canada are constituted as national entities both are divided into geographical areas, designated respectively states and provinces. But it is neither desirable nor practicable in either country to confine workers within the state or provincial territorial boundaries in which they have originally been domiciled. It is of primary importance in a properly organized public employment service in either country that facilities should be provided which would enable a demand for labour in one state or province, which could not be met by the local supply, to be matched by competent surplus labour available in another state or province.

For the successful accomplishment of this transfer of labour, it is essential that the public employment service should have a national outlook, and be organized on a national basis. To do this involves the provision of some bond which will unite the otherwise sectional activities of the various states and provinces. Our Federal Governments are peculiarly adapted to perform this function of binding together state or provincial employment bureau operations on a uniform national basis. Indeed, apart from their co-operation, it is scarcely conceivable that state or provincial efforts could be converted into a nationally unified system.

In Canada the Federal-Provincial government employment system meets this need. It is the common practice for one province to come to the aid of another in the effort to fill labour requirements. Procedure regulations provide that in the event of a shortage of labour existing in the zone of a local office, an order covering the vacancy should be circulated among all offices in the province in which the originating office is located. If the workers required are not available within the province, the order may then be given Dominion-wide clearance, that is, be circulated among all the offices of the Service. The regulations further provide against the possibility of workers being despatched to the employer filling the order, only to find on arrival at their destination that others have secured the employment, and that, therefore, their services are not required.

Central Information Service

Very frequently, however, it is found to be quite unnecessary to put the whole of this machinery in motion. General Superintendents of the Employment Service of Canada for the several provinces have acquired an intimate knowledge of labour conditions as they commonly obtain in all provinces. A General Superintendent for one province having found that one of his local offices is faced with a demand for a certain class of workers is very often in a position to know that the demand cannot be met from any source within his province, but that the necessary labour can be secured from some other province. In such a case, to observe the procedure above described would not only mean the expenditure of useless effort, but would also involve that which is more disastrous, namely, an unwarrantable delay in filling the vacancies. Therefore, in such circumstances the observance of the formal routine is disregarded, and the transfer of workers is arranged by direct communication between the two General Superintendents concerned.

The principle underlying the regulations of the Employment Service of Canada, governing the interprovincial transfer of labour, is that each province has the authority to determine the question of the admission of labour from other provinces, and in accordance with this principle the offices of the Service in each province are forbidden to send workers outside their own provincial boundaries until the consent of the receiving province has been secured.

Reduced Transportation Rate

The co-ordination of the Government employment office activities in Canada through the operation of the Employment Offices' Co-ordination Act has resulted in all the railways of Canada, with one or two minor exceptions, granting a special reduced transportation rate solely in favour of those workers who have secured their employment through the Employment Service of Canada. This rate, which is approximately three-quarters of the regular tariff rate, applies on all journeys where the fare exceeds four dollars. The sympathetic co-operation of the Canadian railways with the work of the Employment Service of Canada, concretely expressed through the medium of this reduced rate, is greatly appreciated. It not only results in facilitating the movement of labour to distant points where work is available, but in the aggregate it annually saves workers who are proceeding to employment a considerable sum of money.

This reduced rate is available upon presentation at the railway ticket office of a certificate issued by authorized officials of the Employment Service. Since April, 1919, to the end of August, 1925, 261,635 of these certificates have been issued. Of this number, 58 per cent have been provincial transfers, that is, from point to point within the same province, while the remaining 42 per cent have been transfers from one province to another. The total number of interprovincial transfers made during the period above named is approximately 200,000. This record demonstrates the practical manner in which the various provinces co-operate in assisting to solve the problem of matching the vacant job with the jobless man or woman, on a national basis.

Employment Service Council

Having regard to the facts that nine Governments, one Federal and eight Provincial, jointly enter into the composition of the Employment Service of Canada; that the employment offices are established and staffed

by the Provincial Governments; and that the function of the Federal Government is to bind the several provincial systems into a composite organization under the terms of agreements annually entered into between the Federal Department of Labour and each of the provinces, what guiding principle is observed in order that harmonious co-operation may be maintained? The administration of a public employment system by multiple governmental authorities, and particularly under a condition in which the cementing factor possesses no constitutional right of jurisdiction, can only be perpetuated in one way. That way is for each to fully respect the rights and interests of the rest and to practise such frankness in the discussion of problems that unanimous action may be secured. Consistent with these essential conditions, under the terms of the Employment Offices' Co-ordination Act the Federal Government of Canada has authorized and created an organization designated the Employment Service Council of Canada. This body, which meets annually, acts in an advisory capacity to the Federal Minister of Labour. Its functions are technically described as "to assist in the administration of the Employment Offices' Co-ordination Act and to recommend ways of preventing unemployment". It is composed of representatives appointed as follows: one by each of the Provincial Governments; two by the Canadian Manufacturers' Association; one by the Association of Canadian Building and Construction Industries; two by the Trades and Labour Congress of Canada; one by the Railway Association of Canada; one by the Railway Brotherhoods; one by the Canadian Lumbermen's Association; two by the Canadian Council of Agriculture; one by the returned soldiers; three, two of whom must be women, by the Federal Department of Labour; and one by the Federal Department of Soldiers' Civil Re-establishment. It will be noted that, within reasonable limits, representation is given to all bodies whose interests are directly and substantially involved. The Council is competent to deal with all matters affecting the welfare of the Employment Service of Canada. It has deliberated upon, and very largely determined the policies of the Service, and has reviewed and approved its forms and methods of procedure. Year by year it discusses the problems that emerge, and submits its recommendations to the Federal Minister of Labour. It may be added that these recommendations are always treated with the respect which the judgments of such interested minds command.

As a further means of meriting and promoting confidence and harmonious co-operation, although the annual agreements bind the provinces to use such forms and records as the Federal Department of Labour may supply, it is the policy of the Department that no changes in forms or procedure, no matter how insignificant, shall be made until the proposed changes have been considered by and received the sanction of the provincial authorities, or the Employment Service Council of Canada.

Soldiers' Civil Re-establishment

As indicative of the measure of response which the practice of such confidence by the Federal Department of Labour elicits from its provincial partners, the following illustration is quoted. For the purpose of exercising jurisdiction over matters affecting the interests of discharged members of the Canadian Expeditionary Forces which were engaged in the World War, the Government of Canada organized a special Department, known as the Department of Soldiers' Civil Re-establishment. One of the functions of this Department was to provide facilities for securing employment for ex-soldiers who were handicapped by reason of disabilities sustained in the War. To discharge this responsibility, the Department organized a special Employment Service, and established offices throughout the country. Eventually it came to be realized that not only was there a duplication of government activity in maintaining two systems of employment service, but also that the Employment Service of Canada was much more suitably equipped to give maximum service to handicapped ex-soldiers than were the offices of the Department of Soldiers' Civil Re-establishment. It was suggested by the representatives of the returned soldiers that this work should be transferred to the offices of the Employment Service of Canada, and the proposal was supported by the Department of Soldiers' Civil Re-establishment, the Employment Service Council of Canada, and a Royal Commission which investigated the subject.

The problem of giving effect to this recommendation presented one grave difficulty, arising out of the fact that responsibility for the care of these disabled ex-members of the Forces rested admittedly upon the shoulders of the Federal Government, while the offices

to which it was proposed that the work should be transferred were established and directly controlled by the Provincial Governments, subject to such conditions as were set forth in the annual agreements. The representatives of some of the Provincial Governments sensed the possibility that, if the proposed scheme were carried out, the handicapped ex-soldiers might develop the practice of regarding the Provincial Governments as having undertaken responsibility for providing them with employment or maintenance. These fears, however, have been set aside, and in accordance with the terms of a new section incorporated in the annual agreements, the offices of the Employment Service of Canada in all provinces, with one exception, are now performing a function for which the Federal Government is entirely responsible, thereby assisting the Federal Government to effect a substantial economy and securing more efficient service for those who are industrially handicapped, due to their participation in the Great War. Among six of the larger offices where the volume of this work is greatest, the Federal Department of Labour has placed eleven federal employees, whose salaries and expenses are paid by the Federal Government, to assist the provincial staffs. These federal civil servants are subject to the direct control and supervision of the provincial officials in charge of the offices in which they are employed.

Reference has previously been made to the financial aid which the Federal Government, under the authority of the Employment Offices' Co-ordination Act, renders to the Provincial Governments to encourage and assist in the establishment and maintenance of free public employment offices. This contribution is equivalent to about one-third of the total maintenance and operating expenditures of the provinces.

In conclusion, the Federal Governments of the United States and Canada can make a substantial contribution to the states and provinces in the work of the public employment service, and it is the writer's hope that the outline here given of the methods of co-operation practised by the Federal Government of Canada, may not only prove instructive, but may also be of practical value in the discussion of the live issue of how to secure greater co-operation between the Federal Government and the states of the United States.

EQUALITY OF TREATMENT OF FOREIGNERS UNDER WORKMEN'S COMPENSATION LAWS IN CANADA AND UNITED STATES

THE League of Nations International Labour Organization, at its sixth session held in Geneva in 1924, adopted a proposed Draft Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents. Article 1 of this Draft Convention requires that each member of the International Labour Organization which ratifies this Convention undertakes to grant to workers who are nationals of any other Member which shall have ratified the Convention, and who suffer personal injury by an industrial accident happening in its territory, or to the representatives of such workers, the same treatment in respect of workmen's compensation as it grants to its own nationals. This equality of treatment would be guaranteed to foreign workers and their representatives without any condition as to residence with regard to the payments which a Member would have to make outside its territory in the application of this principle, special arrangements would be made between the Members concerned regarding the measures to be adopted.

This question had been considered by the Imperial Economic Conference held at London in October, 1923, when a resolution was passed "that this Imperial Economic Conference, taking note of the existing restrictions in the workmen's compensation laws of certain parts of the British Empire on the payment of benefits to workmen and their dependents on the ground of non-residence in the State in which the accident happened, and having regard to the tendency of such restrictions to discourage movement within the Empire, is of opinion that no British subject who is permanently incapacitated, and no dependent of a British subject who has been killed, by accident due to his employment in any part of the Empire, should be excluded from any benefit to which he would otherwise be entitled under the Workmen's Compensation law of that part of the Empire on the ground of his removal to or residence in any other part of the Empire."

Canadian Legislation.—In Canada, workmen's compensation is a matter for the provincial Governments, and with the exception of Saskatchewan, all the Workmen's Compensation Acts contain specific provisions discriminating against the dependents of a deceased workman who reside outside the Province.

The statutes of Ontario, Manitoba and Nova Scotia, and the ordinance of Yukon Territory provide that where a dependent is not a re-

sident of the province he shall only be entitled to compensation if, by the law of the place or country in which he resides, the dependents of a workman to whom an accident happens in such place or country if resident in the province would be entitled to compensation, and in the large majority of cases only to the same amount as would be payable in the like case under the foreign law. An order in Council to the same effect was issued in 1919 under the New Brunswick Act. In the statute of Ontario there is a further provision by which the Board may in such cases, in lieu of the compensation prescribed by the Act, award non-resident dependents "such compensation or sum as may be deemed proper."

The Alberta Act provides that in the case of an injury to a workman after the expiry of two years from his arrival in Canada (one year if the workman is not of British nationality) "it shall be conclusively presumed that he has, at the time of such injury, no dependents other than his father and mother or either of them, save such dependents as are resident in Canada."

Under the British Columbia Act the Workmen's Compensation Board may, instead of the normal compensation, award to non-resident alien dependents such lesser sum as will maintain them in a like degree of comfort as dependents of the same class residing in Canada. The Board is required to distribute among dependents resident in Canada, the fund arising from the payment of such lesser sum.

Under the Quebec Act a foreign workman or his representatives are not entitled to compensation unless resident in Canada at the time of the accident.

United States Laws.—The *Industrial News Survey* (New York) summarizes the provisions of the various State compensation laws in regard to provision for non-resident alien dependents.

The following States provide full payment for non-resident alien dependents: Illinois; Iowa; Maryland; Michigan; Minnesota; New York (widows, children and parents only; Canadian dependents 100 per cent); Ohio; Oklahoma; Oregon (widows, children and parents only); South Dakota; Tennessee; Texas; West Virginia (limited to widow, invalid widower; child under 16, invalid child over 16 or posthumous child); Wisconsin; United States.

The following States provide partial payments for non-resident dependents: Colorado,

25 per cent; Delaware, 50 per cent (widow and children only, parents excluded); Montana, 50 per cent (widow and children only, parents excluded; none if foreign government has less favourable law to United States citizens); Georgia, 1,000 limit; Idaho, 50 per cent (other 50 per cent to State Treasury; none if foreign government has less favourable law to United States citizens); Kansas, \$750 limit (held unconstitutional); Kentucky, 50 per cent (widow and children only, parents excluded); Maine, 50 per cent (Canadian dependents 100 per cent); Nevada, 60 per cent; Pennsylvania, 66 $\frac{2}{3}$ per cent (widow and children only, parents excluded); Utah, 50 per cent (Canadian dependents, 100 per cent); Virginia, \$1,000 limit (Canadian dependents, 100 per cent); Wyoming, 33 $\frac{1}{2}$ per cent (widow, children and parents only).

The following States specially exclude payments to non-resident alien dependents:—

Alabama; New Mexico; Oregon; Washington (none if foreign government has less favourable law to United States citizens; except parents, 50 per cent. Widow or orphan, only if employee lived in United States 3 years).

The following States make no provision in their compensation laws for payments to non-resident alien dependents:—

Arizona; Indiana; Louisiana; Massachusetts; New Jersey; North Dakota; Vermont, and Rhode Island.

In Connecticut the compensation law leaves the question to non-residents to the discretion of the Board of Commissioners under the Act.

NOVA SCOTIA COAL COMMISSION

THE terms of reference of the Nova Scotia Coal Commission were announced by the Provincial Government at the close of October. The members of the Commission were given in the last issue of the LABOUR GAZETTE as follows:

Sir Andrew Rae Duncan, K.C., designated by the British Government at the request of the Government of Nova Scotia, chairman.

The Reverend H. R. Macpherson, D.D., D.C.L., president and rector of St. Francis Xavier University, Antigonish, Nova Scotia.

Mr. Hume Cronyn, president of the Mutual Life Assurance Company of Canada, vice-president and general manager of the Huron and Erie Mortgage Corporation and general manager of the Canada Trust Corporation, London, Ontario.

The Commission opened its sessions during the present month, the miners being represented by Tom Moore, president of the Trades and Labour Congress of Canada, and John L. Lewis, international president of the United Mine Workers of America.

The Commission's Programme

The Provincial order constituting the Commission under the Public Inquiries Act after naming the members, states that they are to inquire fully into the following public matters and to report thereon and submit all evidence taken by them to the Lieutenant-Governor:—

"1. (a) Income, rates of wages, hours and conditions of employment, prevailing in the various classes or occupations of mine workers above and below ground; and whether and if so to what extent, and by what means such income, wages, hours or conditions should be varied or revised, having regard to the best

interests of the industry and those employed therein;

"(b) Any inequalities between the different classes of mine workers as regards wages, hours and conditions of employment; and whether and if so to what extent any of such inequalities are unjustifiable or unfair and what remedy or remedies should be applied;

"(c) Conditions affecting mine workers while in the course of their employment and whether it is practicable to improve such conditions and if so in what manner and to what extent;

"(d) The social and domestic conditions under which mine workers live and whether it is practicable to improve such conditions and if so to what extent and in what manner and direction;

"(e) The cause or causes of the constantly recurring disputes, friction and strife between the operators and their workmen.

"2 (a) All factors directly or indirectly entering into the cost of production, transportation, distribution and marketing of coal and its by-products by any operator and for as many past years as said commissioners deem expedient; and whether such costs have been or are excessive and if so to what extent and for what reason or reasons;

"(b) The capitalization, general financial organization, and cost of management of any operator or operators and whether such capitalization, general financial organization and cost of management is or has been excessive and if so to what extent and in what direction such capitalization, general financial organization and cost of management should be revised or reduced in the best interests of the industry;

"(c) The possibilities of increasing the demand for coal including its utilization as coke.

"3. All such other conditions and matters whatsoever whether of the kind hereinbefore mentioned or not which directly or indirectly have affected or are relevant to the state or condition of the coal mining industry in the Province, as may be deemed expedient by the commissioners.

"4. The word 'operator' herein includes:

"(a) A company or corporation which is incorporated by or under the authority of an act of the legislature of Nova Scotia and which is directly or indirectly engaged in operating any coal mine in the Province;

"(b) A company or corporation by or under the authority of an act of the legislature of Nova Scotia and which is a shareholder of such first mentioned company or corporation;

"(c) A company or corporation which is incorporated by or under the authority of an

act of the legislature of Nova Scotia and which is a shareholder of such second mentioned company or corporation;

"(d) A company or corporation which is incorporated by or under the authority of an act of the legislature of Nova Scotia any share of which is held or owned by any of the aforementioned companies or corporations.

"(e) A company or corporation which is incorporated by or under the authority of an act of the legislature of Nova Scotia and which is a constituent or a subsidiary of or is directly or indirectly controlled or influenced by, or is auxiliary or ancillary to or in any way allied, associated or connected with any of the aforementioned companies or corporations.

"And the Lieutenant Governor by and with the advice aforesaid is pleased to appoint the said Sir Andrew Rae Duncan to be the chairman of the said commissioners and to order that a commission under the Great Seal of Nova Scotia do issue accordingly."

WORK OF THE BRITISH MINISTRY OF LABOUR

A REPORT of the work of the British Ministry of Labour, dealing principally with the years 1923 and 1924, was received recently by the Department. This is the first complete report of the Ministry, whose work has been hitherto described in separate reports by its various branches. The functions of the Ministry are under six main heads:—(i) industrial relations (including assistance in the settlement of labour disputes, in the formation of Joint Industrial Councils, etc.); (ii) employment and unemployment insurance; (iii) Trade Boards; (iv) labour statistics; (v) matters connected with the International Labour Organization; (vi) training and financial assistance for ex-service men.

Industrial Relations.—During the last four years 794 disputes have been settled with the assistance of the Ministry, of which 415 were referred to the Industrial Court for arbitration, 49 were referred to single arbitrators, 33 to *ad hoc* boards of arbitration, 10 were settled under the Conciliation Act, 1896, in 277 cases agreement was reached with the assistance of officers of the Ministry, and Courts of Inquiry (under Part III of the Industrial Courts Act) were appointed in 10 cases. Extracts from the decisions of the Industrial Court during the years 1921-24, together with some of the arguments submitted to the court by the parties, are given in certain cases of special interest, relating to such questions as the influence of cost of living on wages claims, the wages of government industrial employees, the wages of employees of local authorities, rail-

way shopmen, maintenance men in factories, and the definition of "area" or "district." A detailed account is also given of each of the disputes which have been referred to courts of inquiry during the last four years, and of the conclusions of the courts thereupon.

Employment.—At the end of 1924 there were 382 employment exchanges and 772 branch employment offices in Great Britain. The total number of registrations in 1924 in Great Britain (including repeated registrations of the same individual) was 11,262,887. This is the first time that the number of registrations has exceeded nine millions, the figures for the three previous years having been 8,929,483 in 1921; 8,819,523 in 1922; and 8,774,644 in 1923.

Another section of the report deals with the national scheme for the employment of disabled ex-service men, which was inaugurated by Royal Proclamation in August, 1919. Under this scheme employers were invited to join the King's National Roll, on giving a written undertaking to employ a stated percentage (normally 5 per cent) of disabled ex-service men for a period of at least twelve months. At the end of 1922 steps were taken to set up local King's Roll Committees; and in January, 1923, the King's Roll National Council was set up by the Minister of Labour, under the chairmanship of Earl Haig. At the end of 1924 there were 260 local King's Roll Committees, or other special local committees dealing with this work.

Other subjects dealt with under the heading

of employment include juvenile unemployment centres, and other matters specially relating to juveniles; apprenticeships interrupted by war service; overseas employment; duties under the Aliens Order; unemployment relief work, etc.

Unemployment Insurance.—This section describes in detail the central and local administration of the unemployment insurance scheme, with particular reference to the changes made by the new act of 1924; and gives an outline of important decisions by the Umpire on various questions in regard to disqualification, leaving employment without cause, etc.

Trade Boards.—On the 31st December, 1924, there were 43 Trade Boards in existence, with 1,659 members, viz., 129 appointed members, 765 employers' representatives, and 765 workers' representatives. The Retail Bespoke Tailoring Trade Board (Great Britain) had recently been dissolved, and separate Boards for England and Wales and for Scotland were in process of constitution.

The Trade Boards Acts were not applied to any additional trades during 1923 and 1924. Following on consultations with representatives of employers and workers, however, investigations were undertaken into wages and conditions of employment in the light refreshments and dining room section of the catering trade; in the meat distributive trade; and in the drapery and allied distributive trades, and were in progress at the end of December, 1924.

Appendices to the report contain a list of the minimum time-rates payable on the 31st December, 1922, 1923 and 1924 in each of the

trades covered by Trade Boards, and other particulars of the administration of the various Acts.

Labour Statistics.—This is the oldest of the functions of the Ministry, dating, as it does, from a resolution passed by the House of Commons on the 2nd March, 1886, which declares that "in the opinion of this House immediate steps should be taken to ensure in this country the full and accurate collection and publication of labour statistics."

Temporary Functions arising out of the War.—This section of the report deals with the administration of certain schemes of training and financial assistance designed to help in the resettlement of ex-service men after their discharge from the forces, viz., the industrial training scheme, the interrupted apprenticeship scheme, the scheme of professional and business training, and the civil liabilities (resettlement) scheme. A final chapter deals briefly with the Joint Substitution Board, established in 1920 for finding employment for ex-service men in temporary posts in the government service, and for other like purposes.

Appendices.—In addition to a large number of statistical tables in the body of the report, there are 27 appendices (mainly statistical) dealing with industrial disputes, employment exchanges, unemployment, changes in rates of wages, changes in cost of living, membership of trade unions, position of Great Britain as regards draft conventions and recommendations adopted by the International Labour Conference, etc.

Mothers' Allowances in Toronto

The Toronto Mothers' Allowance Board, at their annual meeting in October, recommended that the Mothers' Allowances Act of Ontario, should be amended so as to include the mother of one child, as in British Columbia. Among other proposed changes the Board suggested that in reducing the flat rates and in considering the eligibility of applicants:—

(a) Property be estimated on its assessed value.

(b) Earnings be based, when possible on income tax returns.

(c) No wage-earning child shall be required to contribute more than one-half of its wages to its mother's support.

(d) All the part-time earnings of the mother or foster-mother be exempt.

(e) Allowances be given to mothers whose husbands have been committed to Ontario penitentiaries for at least three months.

(f) The present character of the mother be the essential moral qualification of an appli-

cant whose child has been born or whose children have been born out of lawful wedlock.

The secretary's report for the twelve months ending September 30, 1925, showed that the total number of Toronto mothers who received an allowance was 961, and that 295 new applications were received. The extent to which the Act is aiding the wives of men permanently incapacitated, was shown by the figures for the four-year period: Total number of wives of incapacitated men applying 254; and of this number 221 mothers were considered eligible for an allowance by the Board.

During the same four-year period 82 wives of deserters applied and 37 were considered as eligible for an allowance.

During the past year the Board expended \$376,875. The members of the Board are as follows: Miss Gertrude Lawler, chairman; Mr. Bert Merson, vice-chairman; Miss Jane Barclay, secretary; Mrs. A. D. Fisher, Miss Elsie Gordon, and Captain McIlhinney.

AMERICAN FEDERATION OF LABOUR

Synopsis of the Proceedings of the 45th Annual Convention

THE forty-fifth annual convention of the American Federation of Labour met in Atlantic City, New Jersey, from October 5 to 16. As chairman during the opening formalities, Solomon Saltzman, president of the Atlantic City Central Labour Union, welcomed the delegates on behalf of organized labour of the host city. Other addresses of welcome were delivered by Thomas G. Reynolds (who represented Edward L. Bader, mayor of the city), Emerson L. Richards, State senator of New Jersey, and Thomas B. Eames, second vice-president of the New Jersey State Federation of Labour. These felicitations were acknowledged by President William Green of the American Federation of Labour, who, in the course of his remarks, briefly outlined the objectives of the A. F. of L., pledging himself to the philosophy of trade unionism as expounded by the late Samuel Gompers, and written into the records of the labour movement under his long presidency. In dealing with "the struggle for the realization of that degree of social justice to which the workers of America are entitled", he declared that the A. F. of L. would continue to fight for the protection of child life in America, in spite of set-backs, and he "announced to the people of America that the American Federation of Labour had just begun to fight for the children of America."

Increase in Membership.—The report of the secretary indicated that the total paid-up membership of the organization was 2,878,297, an increase of 12,318, this being the first year since 1920 that the paid-up membership has shown an increase. However, the secretary's survey of the membership of the national and international organizations and the unions directly affiliated with the A. F. of L. showed that because of strikes and unemployment there were at least 500,000 members for whom *per capita* tax was not paid to the American Federation of Labour. Adding this number to the 2,878,297 paid-up membership made a grand total of 3,378,297 members. There were 388 delegates in attendance, representing 95 international and national unions, 4 departments, 25 state branches, 56 central bodies and 21 local trade and federal labour unions, and seven fraternal delegates, viz.: Ben Smith and A. A. Purcell, representing the British Trades Union Congress; Donald Dear, representing the Trades and Labour Congress of Canada; Elizabeth Christman, from the National Women's Trade Union League of Amer-

ica; Anna Fitzgerald, the representative of the Women's International Union Label League and Trade Union Auxiliary; Canuto A. Vargas and Roberto Haberman, representing the Mexican Federation of Labour. Besides there were present at the special invitation of President Green fifteen representatives of the German Federation of Trade Unions, who were in the United States for the purpose of studying the economic, social and industrial conditions of the country. One of these representatives addressed the delegates, bringing the felicitations of the German trade unionists.

The Auditing Committee, which examined and found correct all the financial transactions of the organizations for the period beginning September 1, 1924, and ending August 31, 1925, made a favorable report. The statement indicated that the total receipts, including the balance from the previous year, were \$746,348.43, and the total expenditures amounted to \$533,294.63, leaving a balance of \$213,053.80. Of this balance, \$202,029.27 constituted the defence fund for local trade and federal labour unions, the remaining being in the general fund.

The agenda before the convention, much of which was dealt with in the report of the Executive Council, covered a wide range of subjects, and showed the diversity of achievement attained or attempted by the organization on behalf of its membership. In addition to the recommendations contained in the report of the Executive Council, many questions were submitted for the consideration of the delegates through resolutions submitted directly to the convention. All this material, including the recommendations of the Executive, was referred to various committees for investigation and report. The following is a synopsis of the reports of these committees on the more important questions delegated to them and the subsequent action of the convention thereon.

Report of the Committee on Resolutions

Official Changes.—Under this heading in the report of the Executive Council, the committee reported favourably upon all that had been done by the Executive in connection with official matters attendant upon the death of Samuel Gompers, the election of his successor, William Green; and the election of James P. Noonan to fill the vacancy among the vice-presidents occasioned by the elevation of one of their number to the

presidency. The ideal behind the establishment of the Samuel Gompers' Memorial Committee was also commended.

New Economic Development.—This section of the Executive Council's report was divided into several parts. Referring to the clause dealing with labour banks, the committee noted with satisfaction that the A.F. of L. was gathering information on this subject. While appreciating the possibilities of labour banking and favouring its "wise development," the committee called attention to the grave responsibility assumed by those who entered into such undertakings. Another new development dealt with by the Executive concerned "union-management co-operation" as exemplified in the Baltimore and Ohio Plan, which is now being applied to the Canadian National,* the Chicago and Northwestern and the Chesapeake and Ohio railroads. The Committee recommended endorsement of the Baltimore and Ohio Plan, and further approved the recommendation of the Executive that "national headquarters keep in touch with technical experts and engineers in order that the experience of trade unions in management-co-operation may be put at the service of all concerned with production problems."

Wages.—The question of wages was examined by the Executive Council, its report declaring that "the labour movement is economically sound in its protest against wage reductions, and it is socially correct in opposing conditions that would lower the social standards of our nation." When the matter was reported upon by the committee their recommendation was an endorsement of the Executive's declaration of opposition to wage reduction. An addition to the committee's recommendation was submitted, seeking to adopt a philosophy of wages known as the productive school of wages. However, it was pointed out by the committee that the report of the Executive on the subject was not a complete statement of the wages question, but only a commentary on one phase of it (wage reduction) and consequently the committee could only base its recommendation on that angle of the problem. The committee's recommendation was finally adopted with the addition of the following clause:—

Social inequality, industrial instability and injustice must increase unless the workers' real wages, the purchasing power of their wages, coupled with a continuing reduction in the number of hours making up the working day are progressed in proportion to man's increasing power of production.

Contempt of Court.—Reporting on this part of the Executive Council's report, the committee recommended that the Executive continue its efforts to secure trials by jury instead of trials by the judge in contempt cases where it was alleged that the contempt was committed outside of court.

Union Label and Organizing Campaign.—Under this caption, the Executive Council's report detailed the plans (formulated at a special conference of representatives of international and national unions, held at the A. F. of L. headquarters on May 6) for a special campaign of forty weeks, during which time, by educational effort, the manufacture, sale and demand for union-labelled goods was to be intensively promoted. Jointly with this campaign an organization and membership drive was to be launched among the unions. At the time of the convention, the campaign had not progressed sufficiently to make a statement upon it. There was considerable discussion on the subject, the need of the campaign being emphasized by several delegates including President Green himself. The committee's recommendation, which was adopted, urged all central labour unions and their affiliated local unions to arrange for vigorous organization campaigns in accordance with the program outlined.

A. F. of L. Non-Partisan Political Campaign.—Dealing with this phase of its activities, the Executive Council in its report re-affirmed its faith in a non-partisan political policy of electing its friends and defeating its foes, and stated that "the launching of third party movements has been proved wasted effort and injurious to the desire to elect candidates with favourable records. . . . Experience therefore has taught labour that to be successful politically, it must continue in the future as in the past to follow its non-partisan political policy." The Executive also issued a warning against an incipient move among the influential men "in the dominant political parties to abolish the primaries." In commending the actions and the observations made by the Executive, the committee endorsed the non-partisan political policy as being "imperative as a measure of defence against the deadly menace of the present assault on representative government." This recommendation of the committee was adopted. Subsequently, the committee brought in a supplemental recommendation on this subject, the substance of which was that there was a proposal to abolish free speech in the United States Senate "by in-

* LABOUR GAZETTE, September, 1925, page 858, and previous issues.

roducing the closure and that therefore this proposal" should be fought as determinately as any other proposal inimical to the interests of the people has ever been fought by the American Federation of Labour." This also was adopted.

Formation of Labour Party Rejected.—A departure from the traditional non-partisan policy of the organization was advocated in a resolution which called upon the A. F. of L. to form a Labour Party. This resolution differed from others presented at previous conventions, in that there was embodied a revolutionary tendency (repeatedly repudiated by the A. F. of L.) demanding that organized labour in all its political activities associate itself with "all other political organizations of a working class nature," implying thereby co-operation with Socialist and Communist parties. There was a lengthy debate on the subject, but the committee's recommendation of non-concurrence was practically unanimously adopted. President Green registered emphatic opposition to the resolution, and in doing so made reference to the situation in Great Britain with its distinct political Labour Party. Pointing to "the difference in the social and industrial life of Great Britain as compared to the social and industrial life of America," and to the difference in peoples, in nationality, and in the formation and character of the country, he asked: "What has Great Britain done through its political party that is in advance of what the American workers have done through their trade union movement?" He contended that "we will have to change in America from an agricultural nation to a semi-industrial country before we can make a success along that line," and that "with our form of government, with the constitutional instrumentalities at our command, the voters of America can make out of this government what they wish it to be."

Conscription.—The committee's recommendation on this subject was in accordance with that contained in the Executive's report, namely, opposition to any form of conscription except during actual defensive war. This recommendation was adopted.

Warning Against Communist Activities.—Under this heading the Executive in its report listed a number of organizations and their periodicals which were designated as being engaged in promoting communism. A warning to all trade union organizations was issued by the Executive that before making commitments of co-operation with any unknown or doubtful bodies, information as to their character should be obtained from

the headquarters of the A. F. of L. The committee's recommendation, which was a commendation of this warning, was adopted.

Injunction Abuses.—The Executive Council in its report on this problem outlined the struggle for remedial legislation whereby the equity courts could be "prevented from exercising powers not specifically delegated," the chief objective sought being the elimination of "the abuse and misuse of the injunction writ" as applied to industrial disputes. Trade unionists were also urged to refrain from involving themselves in legal procedure, "especially in the so-called equity monstrosity of our judicial system." The committee concurred in the Executive's action, and the recommendation was adopted.

Investigation into Charges against Public Printer.—Several resolutions, all dealing with this matter, were referred to the Committee. Briefly, these resolutions set forth a number of charges of incompetency and misconduct on the part of George H. Carter, Public Printer. The committee recommended an investigation into the charges, and this was adopted.

Opposition to Individual Contracts.—The committee dealt with a resolution which proposed A. F. of L. endorsement of a standard bill (which had been introduced in the Ohio and Illinois State legislatures by the trade union movement in those states) designed to make unlawful individual contracts drawn to prevent union membership. While in accord with the principle sought in the bill, the committee believed that further research and study should be made of the proposal so that whatever final recommendation may be submitted to the state federations of labour for legislative enactment "would be as all-inclusive and fool-proof as it is possible to design." Reference of the resolution to the Executive Council was therefore recommended and adopted.

Radio Broadcasting of Labour Messages.—A resolution on this subject proposed that the Executive Council should consider the advisability of erecting a radio broadcasting station at the A. F. of L. headquarters to be used exclusively for labour's interests. The committee reported that an investigation was made into this matter by the late President Gompers and it was found to be impracticable of maintenance due to financial and other obstacles. In lieu of the resolution offered, the committee recommended that the Executive Council investigate the feasibility of entering into such arrangements with existing and future broadcasting stations, and if possible provide for the transmission of labour's message by radio through and under

the direction of organized labour. This recommendation was adopted.

Investigation of Employment of Canadian Workers in Violation of United States Immigration Laws.—A resolution, proposing such an investigation, was submitted by the Minnesota State Federation of Labour, the full text being as follows:—

Whereas, at the present time along the borders of our several states in the Province of Ontario numbers of working men and women are engaged in the arts and crafts, employed by various corporations and other employers in states adjoining; and

Whereas, the employment of these workers who are residents of the Dominion of Canada are competing with the organized and unorganized workers of our states, which we believe is in violation of the immigration law; and

Whereas, our American workers, organized or unorganized, do not enjoy these same privileges; and

Whereas, protests have been made repeatedly to the immigration authorities at Washington; therefore, be it

Resolved, that the Executive Council of the American Federation of Labour be instructed to investigate this situation along the borders in an effort that this exploitation and unfair competition be abolished.

The committee's recommendation, which was unanimously adopted, was in the following terms:—

Your committee finds that while the purpose sought to be accomplished may be desirable there is also embraced an element of danger. Then, too, the subject is one requiring additional research into the legal as well as economic problem and consequences involved. Hence your committee recommends reference of this resolution to the Executive Council for further research and study, to take such action as the Executive Council thereafter deems best to fully safeguard and promote the best interests of all affiliated National and International Trade Unions and organized wage earners.

Disarmament to Prevent War.—The committee dealt with a resolution, which, under the caption "Favouring Disarmament to Prevent War," outlined a specific plan of disarmament as against all alternative plans, and in addition proposed a new covenant for the nations. One of the articles in the new covenant proposed that "in case of an aggressive war the resources, wealth and the industry of the nation be conscripted as well as the man power." The committee pointed that this was the first occasion upon which the conscription of man-power had ever been advanced in a convention of the American Federation of Labour. In view of its character, the committee recommended that the resolution be referred to the Executive Council with instructions to promote international disarmament in accord with the international principles of the American Federation of Labour, "and by the means that promise to be most effective for that purpose." This recommendation was adopted.

Industrial Unionism Defeated.—Two resolutions, having as their objective the amalgamation of unions in the same industry into

one organization, were rejected by the adoption of the committee's recommendation of non-concurrence. The resolutions sought the bringing about of the so-called "United Front" by the amalgamation of the various trade or craft unions. In its recommendation of non-concurrence, re-affirming the opposition of the A. F. of L. to this form of organization, the committee's report stated that "the trade union is a development in response to specific needs and conditions which give it form and direction."

National Conference on Organization in Industry and Agriculture.—The committee recommended and the convention adopted a resolution which requested the Secretary of Commerce to call a national conference of representatives of trade associations, farmers' organizations and trade unions to consider the elimination of difficulties preventing constructive organization of all essential factors in agriculture and industry.

A. F. of L. Castigates Red Aggression

To the Committee on Resolutions were referred two resolutions, the acceptance of which would have practically implied tacit recognition in some form or other of the doctrines of Soviet Russia. The first resolution proposed that the American Federation of Labour endorse the movement for world trade union unity and "pledges its support to the Anglo-Russian Unity Committee" in efforts to convoke a world conference of trade unions. In recommending non-concurrence (which recommendation was unanimously adopted) the committee branded this resolution as an "impudent proposal" and declared that it was "merely new language for the old 'united front' propaganda by which Moscow for years sought to bring world labour under its undemocratic and destructive sway." The committee, in denouncing this proposal, expressed its feelings in part in the following explicit language:—

The American Federation of Labour is willing at all times to join with the free labour movements of other countries for the promotion and protection of the interests of the toiling masses. It will not lend its support to any movement to destroy from ambush the freedom of the workers of democratic countries. On the contrary, it will do all in its power to reveal the truth and to open the eyes of labour everywhere to the infamy of this proposed treachery. . . .

Furthermore, we convey to the world the most solemn warning of which we are capable that we will not willingly tolerate in the Western Hemisphere any old world movement which seeks to impose itself upon American peoples over the will of those peoples. What the United States government, through President Monroe, expressed to Europe as a warning against armed territorial aggression, we convey in equally emphatic terms regarding aggression by propaganda. The Americas stand for democracy. The Pan American Federation of Labour is the recognized international labour movement of the Americas.

Through it the American Republics give expression to the aspirations and ideals of their wage-earning masses and the American peoples are determined that it shall so continue.

Neither the red internationale of autocratic Moscow nor any other internationale may in complacency ignore this definition of American labour policy. American labour is friendly to all the world, in so far as the world is bent upon achievement of the aims of democracy. It will contest to the last every inch of ground whenever and wherever autocracy seeks to invade the hallowed soil of this hemisphere. And we shall accept no pretense of "world labour unity" as a mask for invading disrupters and destroyers.

The New World is dedicated to human freedom. We want all the world to be free and we shall help to that end wherever possible. But above all and beyond all we shall preserve and develop the freedom of the Americas.

The second resolution proposed that "the American Federation of Labour declare itself in favor of the recognition of Soviet Russia, and for the establishment of full diplomatic and commercial relations between the United States and that country." For two or three years, resolutions of a similar nature have been submitted to the annual convention, and have always been decisively repudiated. On this occasion, the committee's recommendation again was one of "emphatic non-concurrence," and was almost unanimously adopted by the delegates. Re-asserting the creed of the A. F. of L. in this matter, the committee declared, in part, that "the American Federation of Labour stands unequivocally for democracy, for the right of people to rule themselves and to control their own destinies through political machinery of their own making"; and that "the American Federation of Labour proposes to protect its own integrity against the corrupting, disintegrating, devastating preachings of communism, and to protect in like vigorous manner every democratic institution in our Republic."

The question of the attitude of the A.F. of L. towards Russia came before the delegates also on the third day of the convention when A. A. Purcell, one of the fraternal delegates from the British Trades Union Congress, in the course of his address urged that "the organized workers of America establish the closest fraternal relations with the organized workers of Russia." Replying directly to this invitation President Green said:—

"I wish to be frank and kindly in all I say; but we in America know something about the teachings of Communism and the control the Communist Party exercises over the so-called Russian Internationale. We know that here in America that influence emanating from Moscow is seeking, as it always has sought, not to co-operate with us but to capture and control us. . . . They assert that revolution is the only way the dictatorship of the proletariat can be established and our Republic overthrown. . . .

"The Trade Union Educational League here in America, which is the creature of the Communist Party, controlled and directed by a man who at one

time was active in the trades union movement, frankly announces that its policy is to bore within the labour movement, to destroy it and substitute for our philosophy the philosophy of Communism. We are not ready to accept that, and we wish that our friend who has so kindly advised us and has offered us such frank suggestions might take back to the Russian Red Internationale this message, that the American labour movement will not affiliate with an organization that preaches that doctrine or stands for that philosophy."

Report of the Committee on Executive Council's Report

Teamsters—Railway Clerks.—Under this caption of the Executive's report there was detailed the jurisdictional dispute between the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers of America, both organizations claiming jurisdiction over drivers, chauffeurs, stablemen and garage employees who are not mechanics. This matter came before the 1924 A.F. of L. convention at El Paso, the decision then being that the jurisdiction over the men involved properly belonged to the Brotherhood of Teamsters, and the Brotherhood of Railway Clerks was instructed to disassociate from its membership this class of employees. The Brotherhood of Teamsters claimed that the Brotherhood of Railway Clerks disregarded this decision. Finally, the Executive notified the Brotherhood of Railway Clerks that failure to comply with the decision would result in a recommendation of suspension from affiliation with the A.F. of L. There being no indication that the Railway Clerks would comply with the 1924 decision, the Committee recommended that the charter of the Brotherhood of Railway Clerks be suspended if within ninety days its Grand Executive Board had not complied with the decision of the Executive Council. On a roll call vote, the committee's recommendation was sustained by 23,849 to 3,910 votes, 764 votes not being cast. Four other jurisdictional disputes were referred to this committee, in three of which satisfactory adjustments were achieved, while in the fourth progress in the direction of a settlement was reported. The committee also concurred in the action of the Executive Council in granting permission to the International Union of Steam and Operating Engineers to take into membership marine engineers. This met with some opposition, but the recommendation of the committee was adopted. Another adopted recommendation from the committee was one requesting the Executive Council to promote the establishing of a suitable compensation measure, covering longshoremen and other land workers who may be employed on shipboard.

Railroad Labour Legislation.—The Executive Council's report on this topic outlined the matters contended for before the Railway Labour Board. In this respect the committee observed that the criticisms made by the American Federation of Labour with regard to the Railway Labour Board "have been thoroughly justified by the experiences of the last year." It was pointed out that "the Western Engineers and Firemen found it more convenient to exercise their economic power instead of following the tortuous and never-satisfactory course of appealing to the Railway Labour Board." The committee advised the delegates to carefully peruse this section of the Executive's report.

Compensation.—This part of the Executive Council's report urged state federations of labour to work for workmen's compensation legislation "even though all the provisions may not be satisfactory," adding that "if the principle is established through the enactment of a workmen's compensation law, the act thus passed can be perfected through amendments." The committee's recommendation was an endorsement of this statement.

Report of Committee on Education

Child Labour.—One of the chief social reforms upon which the American Federation of Labour has concentrated all its power and influence is the protection of child life. It has waged a continuous crusade for several years on behalf of this cause. Eventually it succeeded in bringing sufficient pressure to have Congress pass a resolution on June 20, 1924, which provided that "Congress shall have the power to limit, regulate and prohibit the labour of persons under eighteen years of age." In order that this might become a constitutional amendment its enactment by three quarters of the States of the Union was required. The section of the Executive's report on this subject (which was referred to the Committee on Education) dealt with the campaign waged by the A. F. of L. to secure the enactment of this amendment by the necessary percentage of State legislatures. The Executive also charged that "a most stupendous publicity campaign of vilification, misrepresentation and falsehood" was launched against the amendment. Reviewing the situation up to the time of the convention, the Executive's report stated that both houses of four States and one house of two States have ratified the amendment; both houses of twenty-two States and one house of seven States have rejected the amendment; four States have indefinitely postponed action. The report further stated that "Congress cannot either withdraw or appeal the amendment; it is the property now of the State Legis-

latures and will remain there until ratified. States which have ratified the amendment cannot reverse their action, but States which have refused to ratify can at any time change their vote in favour of ratification." This being the situation, the Executive maintained a continuous agitation in the various States for the amendment to be made a political issue in the next election of members of the various legislatures. A whole afternoon of the convention's time was specifically devoted to discussing what further action would be best suited to promote the attainment of this objective. In concluding his address on the question, President Green made the following declaration:—

"There are over 500,000 children of tender age employed in the mills and mines and factories of our nation, children that ought to be in school, children that ought to be permitted to live their young lives in happiness, children that ought to be given a chance to develop and become sturdy American citizens. Does the prosperity of America depend upon the exploitation of our children, and are we so inhuman as to stand by and see this exploitation go on? So far as I am able to influence this great labour movement the fight will go on as long as we live and through the succeeding generations until the children of the nation are saved."

Subsequently, the committee in its recommendations suggested that each central labour body throughout the country send out trained men to effectively present the facts concerning child labour; that efforts be put forth to secure the enactment of legislation similar to the Webs-Kenyon law which would enable the States having advanced legislation on this subject to prevent shipment of goods and commodities into their territory from States which do not observe equal high standards of child life protection; and finally by renewed energy in the promotion of the purchase of union labeled articles. This recommendation was adopted.

Among the other recommendations of this committee which were adopted were:—Endorsation of the proposal that international unions assist in erecting a memorial to labour in the cathedral of St. John The Divine, New York City; support of a bill to establish a Federal Department of Education; approval of a resolution to secure legislation authorizing the Board of Education of the District of Columbia to name the first building hereafter to be erected in the District of Columbia as the Samuel Gompers School; continuation of legislative action by the A. F. of L. in support of the registration of union trade marks and labels; in favour of a uniform compulsory education bill; urging all national and international unions to undertake active affiliation with the Workers' Education Bureau under the provisions of that plan; urging the carrying out of the Samuel Gompers' Fellow-

ship which was created at the El Paso convention as a tribute to the constructive services rendered by the late Samuel Gompers in Mexican-American relations; promotion of special effort to celebrate Labour Day as its founders intended it should be observed.

Report of the Committee on Legislation

The Committee on Legislation dealt chiefly with the legislative programme of the Executive Council as submitted in its report. A pamphlet was issued by the Executive in which were listed the legislative achievements of the A. F. of L. This record showed that since 1906, 208 laws in the interests of labour had been enacted by Congress. The report of the Executive also detailed the favourable legislation enacted during the second session of the sixty-eighth Congress, the bills favourable to Labour which failed to pass this Congress, and the hostile bills defeated during the same period. The committee commended the Executive for its vigilance in these matters. Several of the legislative proposals touched on had been before previous conventions, and in such cases the Committee in the main reaffirmed positions originally taken. The committee also dealt with a number of resolutions concerning conditions in the civil service of the United States. To the committee on state organization was referred that part of the Executive Council's report which treated of the legislation enacted and defeated in the State legislatures. This committee congratulated the State federations for their alertness and efficiency.

Report of the Committee on International Labour Relations

Two of the chief subjects with which the committee on international labour relations had to deal were the attitude of the American Federation to the world court and the question of the abolition of extra-territorial rights in China. As regards the former matter, the Executive Council reported that sentiment in the Senate appeared to be in favour of participation in the permanent court of international relations. However, a resolution was submitted to the committee disapproving of the affiliation of the United States with the World Court. The committee, recognizing "the extreme caution to be exercised in whatever decisions are reached," recommended that the matter be referred to the Executive for further research, observation and study. Under the caption, "China," the Executive Council traced the history of foreign trade relations with that country, culminating in the establishing of what became known as extra-territorial rights. The Executive Council

took the ground that the time had come when these should be abolished, and in a letter to the Hon. Calvin Coolidge, President of the United States, President Green urged that the United States take the initiative in calling an international conference to make plans to abolish extra-territorial rights in China, declaring that such a course was necessary to China's administrative integrity and sovereignty. A resolution along the same lines was also submitted to the committee, which recommended adoption of the same, and expressed complete accord with the aims sought.

Samuel Gompers Memorial Service

One afternoon's session of the convention was set apart for the purpose of allowing the delegates to participate in a memorial service to the late Samuel Gompers, who was termed the architect and builder of the American Federation of Labour. At this service, which was largely attended, impressive tributes were paid to the career of the late President of the Federation, his inestimable services to the labour movement being extolled by the men who were his closest associates. After the singing of the hymn "Abide With Me" the audience stood in silence until the drop of the president's gavel.

Convention Endorses Miners' Strike

By consent of the delegates, the convention gave direct consideration to a resolution presented on behalf of the United Mine Workers of America. This resolution called upon the American Federation of Labour to extend its full and complete endorsement to the 158,000 members of the United Mine Workers on strike, approving of the efforts of the mine workers in their demands for increased wages, improved working conditions and complete recognition of the union; and that the Executive of the A. F. of L. be directed to co-operate in every possible and practicable way to the end that the anthracite mine workers achieve complete success in their efforts." President John L. Lewis addressed the delegates, and in urging the adoption of the resolution he declared that "the anthracite operators are extorting from the public a sum which ranges between sixteen million and twenty million dollars annually to which they have no decent claim. When they appeal to the public for support, they come into court with unclean hands." The resolution was adopted by unanimous vote.

Election of Officers for 1925-1926

The election of officers resulted as follows:—

President, William Green.

First vice-president, James Duncan.

Second vice-president, Frank Duffy.
 Third vice-president, T. A. Rickert.
 Fourth vice-president, Jacob Fischer.
 Fifth vice-president, Matthew Woll.
 Sixth vice-president, Martin F. Ryan.
 Seventh vice-president, James Wilson.
 Eighth vice-president, James P. Noonan.
 Treasurer, Daniel J. Tobin.
 Secretary, Frank Morrison.

The two fraternal delegates to the British Trades Union Congress are Frank Farrington, President of the Illinois Mine Workers, and William L. Hutcheson, President of the United Brotherhood of Carpenters and Joiners. James B. Connors, Vice-President of the Switchmen's Union of North America, was elected fraternal delegate to the Trades and Labour Congress of Canada. Detroit was chosen as the convention city for 1926.

NOTES ON LABOUR UNION ACTIVITIES

Upholsterers' International Union of North America

The fourteenth biennial convention of the Upholsterers' International Union of North America was held at Chicago in July. This organization has six local unions in Canada.

Conditions in Canada.—The upholstery craft in Canada was reported to be in an unsatisfactory state because of trade conditions and lack of interest of the members, and it was decided to send an organizer for a sufficient time to build up a strong organization. The greatest need in Canada was stated to be in Toronto and the surrounding district. A few years ago there was a strike of all but one shop in Toronto which lasted several weeks and was lost by the local. Since that time many men have dropped out. Competition from unorganized towns in the vicinity were keenly felt in Toronto. There are about 150 furniture upholsterers in Toronto and in the surrounding towns within a radius of about 100 miles there are a few hundred more men. Although the Montreal local had a better hold, organization work was needed there also. Organization work which had been done in Canada in the past had proved ineffectual because after the organizer left there was no one to look after the interests of the locals. The International will assist the Canadian locals to organize if they will make arrangements to keep an organizer in the field after the campaign is over to keep up what has been begun. A conference will be held between an International representative and the Toronto and Montreal locals to decide on a course of action.

Changing conditions.—President Kohn's biennial report showed the progress of the organization since 1923. At that time the members were still benefiting from war-time prosperity, but since then there were protracted periods of unemployment and part-time work, and work was back again on the seasonal basis. In this trying time the local unions had maintained their solidarity, and with the foundation of a unified membership

they had been able to retain what had been built up in prosperity. In 1925 they had 9,400 members, as compared with 9,000 in 1923.

Limit of strikes.—Strikes occurred in the past two years, but team work between the locals and the International was the means of keeping down their number, and of preventing useless industrial warfare. "I wish to emphasize," the President said, "that it is our established policy to seek the ways of peace and strike only when necessary and after all honorable means to settle have failed. Our local unions, except in a few instances, have implicitly adhered to constitutional procedure in calling strikes and have obtained the approval of the General Executive Board in each deserving instance." Fifty-two strikes and 19 lockouts were reported in the two years, of which 34 strikes and 11 lockouts were won. The sum of \$26,970 was spent in strike benefits. The organization aims at wiping out the low wage belts in the United States and Canada for the allied crafts.

Piece and time work.—The question of a maximum scale of wages was discussed at the last convention and a committee was to look into the advisability of recommending a maximum scale as well as the minimum. Nothing was done in this direction, but the president considered that action should be taken to protect the trade "against a speeding up system that destroys working conditions as well as the industry itself."

The convention was opposed to piece-work considering that it should be supplanted by the saner and more healthful system of week work. On this subject it was stated:—"It may seem peculiar to have a trade union organization go on record establishing a maximum rate. We have local unions whose minimum rate is \$44 a week. We have men in that organization drawing as high as \$100 a week. This \$100 a week is not paid by the employer because the job is so superior; it is paid because the speed-up system is inaugurated by these men receiving this high wage. When the season is about over you know the

confusion in the shop among the men working alongside of these people in order to maintain their jobs, getting a little less, perhaps \$80 or \$90. They try their best to get into the employer's good graces by coming as close as they can to the man who gets \$100 or \$110. Then the man who gets \$100 or \$110 is liable to be laid off because about the same amount of work is produced by the man getting \$80 or \$85.

Group insurance.—In recommending union insurance the president pointed out that large employers of labour have used group insurance to keep their workers from unionizing and to deter them from demanding more wages and better conditions. These non-union workers learn to their sorrow they can easily be discharged and their insurance is lost. "By the union offering insurance, we not only remove this advantage enjoyed by the employers, but we put ourselves in a position of offering more because by receiving insurance through the union the workers will not be tied down to any job. They will be protected by the union no matter where they work." Describing the system, he said that fifty or more members are required to obtain group insurance, the premium to be paid depending on the average age of the group. In some instances a group in which ages range between 15 and 59 each member can have a \$1,000 policy for 75 cents per month or \$8.94 per year. As individuals, many members would be refused if applying for insurance by themselves. They can obtain it through group insurance. The premiums paid by young and old are very low and advantageous.

Apprenticeship.—It was reported that in New York City one of the union local unions, in conjunction with the employers and the city educational authorities, is conducting night classes for apprentices. Apprentices receive this training to supplement their work in the shops. Other local unions are contemplating similar schools and are studying the New York experiment.

Forty-four hour week.—The upholsterers' international union has been for the most part successful in establishing the 44-hour week for the allied crafts, and those still working 48 hours were recommended to press for the new goal on the first opportunity. The equal division of work and the shorter workday would, it was considered, be more in the direction of unemployment insurance.

Co-operative shops.—A referendum of the members will be taken on a proposal to establish co-operative shops. This policy was explained by the president as follows:—"Our local unions in making demands, whether for a shorter workday, more wages or better shop conditions must do so on the basis that the

demands are just and within the power of the employers to grant. If the demands are refused and employers adopt a hostile attitude and are successful for the time in maintaining it, then we should prepare to demonstrate the feasibility of what we ask. To be prepared to do this, it is advisable to study co-operation so we may be able to establish and successfully operate co-operative shops. Such co-operative shops should be established under the supervision and permission of the International in order to protect the movement from mishaps. Co-operative shops controlled by our local unions must of course be organized on a sound basis and be given every opportunity for permanent success. I have no doubt that under proper auspices union controlled co-operatives can be successful. The success of co-operative institutions is mainly in the distribution of co-operative shares and the sales of the commodity produced. Therefore our main assets to success are the furniture store keepers and salesmen who must be made copartners of the venture."

On the general financial policy of the union the president stated "we have become shareholders in the largest labour bank in the east. As one of the labour unions that helped to form the Federation Bank of New York, the Upholsterers' International Union is helping to demonstrate the ability of workers to carry on in the field of finance heretofore monopolized by capitalists who operated with no regard or consideration of the welfare of wage earners. Banking, insurance, co-operatives, out of work benefits are lines of endeavour which will more and more engage the attention of the trade union movement. As a progressive organization of wage earners, we, of the Upholsterers' International Union should actively concern ourselves with these questions."

Union labels.—Two union labels are now used by the International, and unions were asked to use them as far as possible.

Jurisdiction.—During the past two years the International Union acquired complete jurisdiction over tent and awning work.

President William Kohn and Vice-president E. E. Graves were re-elected to office for the ensuing period.

Carpenters and Joiners of Quebec

At the sixteenth annual convention of the Provincial Council of the Carpenters and Joiners of Quebec, held recently at Sorel, P.Q., a resolution was passed protesting against the continuance of the present Workmen's Compensation Act of the province, it having been understood, that a new law would be enacted that would be more in accord

with the views held by labour men. This subject will be discussed at special conventions of the order, to be held at various points throughout the province during the next session of the provincial legislature. The grounds for desiring a change in the law were stated as follows:—The cost of living has increased considerably since 1916; the existing limit of \$1,500 as the annual salary of workmen who may benefit under the act practically nullifies its usefulness; as the provincial Commission on Workmen's Compensation, in its recent report (LABOUR GAZETTE, February, 1925) failed to agree on a basis for a new act, it remained for the Provincial Government to act on the recommendations of the labour member of the Commission, which were the result of a wide study of the subject both in Europe and America.

Fair Wages.—The convention re-affirmed the opinion of the organization that the provincial order requiring the payment of fair wages for work under government contracts should contain definite schedules of the wages that are considered to be "reasonable" (an action arising out of the term "reasonable wages" was noted among the Recent Legal Decisions in the August issue of this GAZETTE).

The following officers were elected for the ensuing term:—

President: N. Arcand.

Vice-presidents: P. Blanchandin, Montreal; Omer Fleury, Quebec; O. Bernier, Riviere-du-Loup; Jos. Chapdelaine, Sorel, and Isidore Michaud, Hull.

Secretary-Treasurer: Eudore Primeau.

Secretary: Pierre Lefevre.

The next convention will be held at Quebec.

Proposed Compensation Amendments in British Columbia

Increased compensation for workmen and their dependents in accident cases was recommended to the cabinet of British Columbia during October by a deputation representing the railroad unions of British Columbia. It was proposed to increase the compensation to injured men from 62½ per cent to 75 per cent, and to raise the allowance to widows from \$35 to \$40 a month and the allowance for each child from \$7.50 to \$10. It was further suggested that when a workman dies without dependents the money which otherwise would have been allotted to his widow and children should go to a fund to be created to rehabilitate injured workmen. The delegation also recommended a larger exemption from income taxation on behalf of each child in the case of all taxpayers who have children.

Cigar Makers' International Union

The twenty-fifth convention of the Cigar Makers' International Union was held in Boston, Massachusetts, in August. This organization has ten local unions in Canada, including St. John, N.B., Montreal, Sherbrooke, Que., Toronto, Hamilton, London, St. Catharines, Kitchener, Ont., Stettler (Alberta), and Vancouver, B.C. The average membership of the union for the year ending July 1, 1925, was 25,119, and the total expense of the organization for the year was \$68,900, making the average cost per member for maintaining the Union about \$1.51.

The situation in regard to organization in Canada was discussed, and special attention is to be devoted to Montreal district in the educational "drive", that is to be carried out by the Union throughout its territory, with special reference to the union label rule.

Union Problems.—President G. W. Perkins, in his opening address, pointed out several basic facts in regard to wages and organization in the industry which must be considered in comparisons with other industries. These facts are that women have come into the cigar industry to a greater extent than in any other industry, there being 50,648 women and 28,293 men employed in all capacities making cigars; prohibition has hurt the industry; governments have interfered with it by revenue and tariff duties; and there is a growing control of it by trusts, with systems of chain factories and chain stores, which are able to buy materials in enormous quantities, giving them an advantage over independent manufacturers, the result to the employees being low wages and long hours.

Conciliation First.—The 1923 convention at Chicago amended the strike laws of the Union, but retained the right to strike as a last resort, and provided that all means having for their object the prevention of a strike should be exhausted before a strike was precipitated.

"I again strongly urge that the strike laws be maintained and if anything improved so that at all times the right to strike in a just cause and where all other efforts have failed will remain unimpaired."

Question of Insurance Group Rate.—The Chicago convention, 1923, adopted a new plan of insurance and authorized the International President to sign a contract with the International Life and Trust Company, which company under the new plan would assume payment of death benefits. The premium rate under the group insurance plan with this company as presented to the convention was \$1.51 per year per \$100. Later on it was learned from an actuary that there was no

such thing as an average group rate for all members. The group rate was reached by taking all of the members in the Union at the age of 21 and getting their premium rate for group insurance, then all of those of the age of 22, 23, 24, 25 and so on up to 69 years, and getting the group rate for each of these different classes and then from these different group rates the average group rate would be reached. "On investigation," the president explained, "I found that the true group rate was \$2.01 instead of \$1.51. Since the average group rate of \$1.51 per \$100 as presented to the convention, which had undoubtedly influenced the delegates and the membership at large in approving the plan, was erroneous, I felt justified in refusing to sign the contract." Death benefits were subsequently handled by the International union itself, and 5 cents per week charged to each member per \$100 enabled the Union to pay all demands.

Speaking of the proposal to form a trade union insurance company President Perkins said: "I have great hopes that this company will ultimately be formed and when once formed it will be in a position to insure all members of trade unions in any sums desired and to enable the unions and members thereof to come in under the group insurance plan."

The convention later adopted a resolution authorizing the Executive Board to negotiate terms with the Union Labour Life Insurance Company under which the Cigar Makers' International Union may transfer their insurance to said company. The president pointed out that the proposed new company in its plans will in no wise interfere in any way, shape or form with any national or international union on insurance plans, policies, and control: "You may insure your members under the group insurance plan and take out a blanket insurance policy in which you will have absolute say and control as to how much the group insurance shall be and whether it shall be compulsory or voluntary, or you may insure with the Union Labour Life Insurance Company on a group rate plan and premium fixed by the Union and allow the members to deal individually with the company."

The monthly system of paying membership dues was substituted for the former weekly payment system.

Union Label.—The Executive Board was instructed to investigate the feasibility of obtaining a copyright label to be used nationally by manufacturers who will subscribe to rules to be made by the International Union, to encourage co-operative buying of leaf, through a central bureau for the purpose of standardizing quality.

Industrial Programme.—The report of the committee on Officers' Reports, which was unanimously adopted by the convention, contained the following paragraph:—

"Mutually agreed upon plans having in mind co-operation and co-ordination between the wage-earners and invested capital and management will obviate the necessity of both sides remaining on a war footing, and will tend to eliminate the cost of strikes and will enable all parties at issue to devote more time, money, thought, and attention to the tasks of (a) eliminating waste, (b) standardizing, (c) stabilizing, (d) unification of wages and regulation of the hours of labour, (e) regulating selling prices, (f) necessary legislation, (g) publicity propaganda, (h) advertising, (i) establishment of cost study classes, and many other things that affect industry and the fundamental forces engaged therein."

The next convention will be held at Chicago, Illinois.

Amalgamated Civil Servants of Canada

The Amalgamated Civil Servants of Canada held their biennial convention at Edmonton, Alberta, in September. The 1924 issue of the Department's publication "Labour Organization in Canada" states that this society developed from the Amalgamated Postal Workers, which came into existence in September, 1918, as a result of dissatisfaction with the manner in which the strike of the postal employees was conducted in the east and the settlement accepted by the general officers. The original jurisdiction of the Postal Workers, membership in which was open to all post office employees under the rating of a first-class clerk, was from Sault Ste. Marie, Ontario, to Victoria, British Columbia, and the intention of the promoters was to amalgamate the associations of postal clerks, railway mail clerks and letter carriers in the territory named. At the convention of the Amalgamated Postal Workers held in August, 1921, the name was changed to Amalgamated Civil Servants of Canada, membership being extended to all employees of the Dominion Government.

Twenty-seven delegates attended the convention representing about 1,400 active members. The resolutions adopted included the following:—

Employees who lost positions during the 1919 strike and who have since re-entered the service should be permitted to count this previous service towards superannuation benefits.

The Government was asked to grant concessions to civil servants on the National Railways.

The Post Office Department was requested to allow where practical parcel postmen to tender contracts for parcel delivery.

The annual leave period should be from May 1 to October 31.

Promotion to postmaster in smaller offices should be open to employees.

The Finance Department was asked to arrange for payment of retirement or other allowances within one month of resignation or dismissal.

The principle of the 44-hour week with overtime pay for any work in excess, was endorsed.

All branches of the service should be granted the privilege of drawing their salary cheques for the full period of their annual leave at the commencement of leave, and the semi-monthly pay day was approved.

In the Post Office Department, 7 hours night duty should be paid the same as 8 hour day duty.

The authorities were asked to furnish details as to the basis on which promotional examination marks are allotted.

The principle of Joint Service Councils and staff representation on Civil Service Councils was endorsed; also that money fines should be abolished and that letter carriers' helpers should be supplied with uniforms, etc., when engaged in outdoor duty.

Temporary and seasonal employees in the Public Works Department should be granted statutory leave.

Civil servants should be granted the same political rights as other citizens.

The recent salary revision was unanimously condemned.

An employee should on his request be notified of the nature of any confidential report filed against him, and an opportunity given for rebuttal.

No Customs-Excise employee should be compelled to work more than 44 hours in any one week.

Senior men, where qualified, should be allowed to fill higher positions that become vacant.

Salary revision figures should be based on those of 1922-1923 (including bonus), with no discrimination against employees without dependents and a \$1,200 minimum.

All statutory increases should be at the rate of \$120 per annum.

Voluntary retirement should be permitted at 55 years of age or after 30 years' service, whichever comes first.

The preferential delivery of mail should be abolished.

Officers were elected as follows:—President, F. Knowles, Vancouver; 1st Vice-president, H. Baker, British Columbia; 2nd Vice-presi-

dent, S. C. Berridge, Manitoba; 3rd Vice-president, J. Horswell, Alberta; 4th Vice-president, E. Egglestone, Saskatchewan; 5th Vice-president, A. Ramsay, Ontario.

Interprovincial Association of Fire Fighters

The first convention of the Alberta and Saskatchewan Interprovincial Association of Fire Fighters was held at Calgary in August. This Association is affiliated with the International Association of Fire Fighters. The convention being the first joint meeting it was not possible to carry out much constructive work, but investigations were undertaken in various directions in which future action may be taken.

Pensions.—The convention favoured the establishment of a pension fund for the members of all paid fire departments in the two provinces. Should no such pension fund be put into effect, the Association will consider at its next convention the establishment of provincial superannuation through provincial legislatures, covering the firemen of the provinces of Alberta and Saskatchewan.

Weekly Rest.—The Association favoured the securing of the one day's rest in seven, and the seeking of legislation making the double-platoon system a provincial enactment.

Standard Salaries.—The convention recommended to the affiliated locals the establishment of a standard rate of salaries, and that secretaries of all locals be asked to submit any proposed change to their present agreement when same is being negotiated for 1926.

Organization.—The convention asked that the vice-president of the International Association of Fire Fighters in Canada should be allowed to attend the convention of the Trades and Labour Congress. The convention asked that the International Association should place a paid organizer in Canada.

Officers were elected as follows:—

Executive Council.—President, T. Steele, Edmonton; Vice-president, T. Kay, Saskatoon; Secretary, L. M. Maclean, Calgary.

Board of Trustees.—W. Young, Edmonton; E. Weir, Lethbridge; P. Argue, Regina.

The next convention will be held at Lethbridge, Alberta.

Mine Workers' Union of Canada

The Mine Workers' Union of Canada held its first district convention at Calgary in September, with 35 delegates in attendance, representing coal miners in Alberta and Eastern British Columbia, in the territory of District 18, United Mine Workers of America. The circumstances which led up to the formation of independent unions were noted from time to time in the LABOUR GAZETTE in connection with the various disputes and new agreements in District 18 (January, 1925, page 18; May,

1925, page 510; June, 1925, page 620). The various independent unions, including miners of Crowsnest Pass, Blairmore, Colman, Corbin and Bellevue, held a convention at Blairmore last June, and agreed to form a new organization under the title "Mine Workers' Union of Canada," with Frank Leary as president. The movement spread later to other mining districts, and at the Calgary convention delegates attended from several coal mining districts as follows:—Corbin, Coleman, Blairmore, Bellevue, Coalhurst, Nordegg, Fifty-two and Half Mile, Luscar, Midlandvale, Lethbridge, Edmonton District, Rosedale, Wayne, Cannore, Saunders, Foothills, Brule and Drumheller. The convention drew up a constitution for the new organization. Its policy will be to further nationalization of mines, to organize the unemployed, to take measures for labour defence, and to support the Canadian labour party.

United Mine Workers' Convention Postponed

A referendum vote on the question of postponing the biennial convention of the United Mine Workers of America until January, 1927, has resulted in almost unanimous approval. It was explained at headquarters of the organization that the principal business of the convention will be the formulation of a new wage scale agreement to supplant the one entered into by the operators at Jacksonville, Florida, in 1924, and which expires in 1927. The holding of a convention in 1926, the next regular year, is deemed unnecessary by union officials.

General Labour Union, Incorporated

Notice was given in the *Quebec Official Gazette* of October 17, of the issue of letters patent incorporating, under part I of the Quebec Companies Act of 1920, a new organization under the title "General Labour Union, Incorporated." Its purposes are stated as follows:—

To organize labour associations with a view to improve the social condition of workmen; to finance, aid and assist any such associations; to carry on social and economical works for the protection, maintenance and assistance of the labouring class; to make and enter into all kinds of contracts, either with existing labour associations or other associations to be organized for the above purposes; to contract with any other company for the above purposes; to act as intermediary, enter into partnership with or take over any other company or individual for the purposes of the present company; to have the right to possess movable and immovable property contract hypothecs, issue bonds or debentures and to do every thing which the company incorporated

under the present act may have or has the right to do; to purchase, sell, import or manufacture all products; to act as insurance, realty or financial agent, under the name of "L'Union Ouvrière Générale, Incorporée—General Labour Union, Incorporated" with a total capital stock of \$19,000, divided into 190 shares of one hundred dollars each.

The head office of the company will be in Montreal.

Barbers' Union Prepares Old Age Pension Plan

The Journeyman Barber's Union of America is submitting an old age pension plan this month to a referendum vote of its members. The plan provides as follows: "All beneficiary active members shall pay 65 cents per month, which shall be placed in a separate pension fund, which shall accumulate for a period of five years before any pension benefits shall be paid, after which time any such beneficiary active member who is in good standing, having reached the age of 60 years, and having been a continuous contributing member for 20 years, and who finds it impossible to secure employment at the barber trade; or any member having a continuous contributing membership of 20 years, immediately prior to applying for a pension, who by reason of affliction is totally incapacitated for work, may receive the sum of \$6 per week, subject to the provisions provided for in said plan.

"Any member earning more than two days' pay in any one week at the barber trade at the minimum scale of the union with which such member is affiliated, shall not be entitled to the pension for that week.

"No member shall receive sick benefit while receiving pension benefits, but in the event of death shall be entitled to such death benefits as provided for in the constitution.

Minimum Wages in State of Washington

The Industrial Welfare Committee of the Department of Labour and Industries of the State of Washington recently issued a series of orders fixing conditions under which female labour is to be employed in certain industries. These conditions include the following minimum rates of wages for experienced employees:—Public housekeeping, including chambermaids, dishwashers, waitresses, counter girls, etc., \$14.50 per 48-hour week; \$2.50 per 8-hour day, or 35 cents per hour; laundry, dry-cleaning or dye works, \$13.20 for 6 day week; telephone or telegraph operator, \$13.20 for 6 day week; mercantile industry, \$13.20 for 6 day week; manufacturing establishments, \$13.20.

GROUP INSURANCE FOR CANADIAN BROTHERHOOD OF RAILWAY EMPLOYEES

THE Canadian Brotherhood of Railway Employees have arranged with the Metropolitan Life Insurance Company a special group insurance contract which will give the members the privilege of securing valuable benefits without medical examination and at extremely low cost. In urging the members to adopt this plan of insurance the union officers state their belief that it will have far-reaching effects on the future of the Brotherhood. "Aside from any other consideration, it is good business," they continue; "the low cost and the absence of restrictions are features which you could not secure as individuals in the open market. These features alone make plain the wisdom of your taking advantage of this unusual opportunity immediately."

The principle of group insurance was approved by the delegates at the convention of the Brotherhood held at Toronto in September (LABOUR GAZETTE, October, 1925). The insurance will become effective on a date to be decided when application has been made by at least 75 per cent of the entire active membership, or by at least 75 per cent of the active members in any province, municipality, or local branch. Members will be notified by the Brotherhood the date the insurance is to go into effect.

As the Company has not yet received the required number of cards from the various locals it is unable to state the exact amount of premium, but according to preliminary estimates the present cost of the insurance will be from \$1 to \$1.10 per month for \$1,000 of insurance, or from fifty cents to fifty-five cents for \$500 of insurance. The exact cost will depend upon the ages of the members who accept the plan, and it may vary from year to year. The greater the number of members accepting and continuing the plan the lower the actual cost is likely to be. Should the present average age be 35 it is likely that the average cost may be less than \$1 per month for \$1,000 of insurance. It is because this group insurance is offered at wholesale rates that the cost is much less than the cost of individual insurance. Premiums will be payable monthly in advance in each local.

Some facts regarding the plan may be given as follows:—

Amounts of Insurance.—Class A.—For members earning \$100 or less monthly the amount of life insurance is \$500, and the amount of the total and permanent disability benefits

(payable for 10 months), is \$50.35 per month.

Class B.—For members earning over \$100 monthly, the amount of life insurance is \$1,000, and for total and permanent disability benefits (payable for 20 months), the monthly payment is \$51.04.

The insurance of members in Class A will be automatically increased to \$1,000 when their monthly earnings exceed \$100. However, should the earnings of any member insured in Class B be reduced to \$100 or less, there will be no decrease made in the amounts of insurance unless upon request of the member. Members can apply only for the amounts of insurance to which their monthly earnings entitle them.

The life insurance will be payable to the beneficiary named by the insured member, in the event of death from any cause. Each member names his own beneficiary—the person to whom he desires the insurance paid in the event of his death.

Disability Benefits.—Insured members who may become totally and permanently disabled before reaching the age of 60 will receive their insurance in monthly instalments while disabled as follows:—\$500 insurance, in 10 monthly payments of \$50.35 each month; \$1,000 insurance, in 20 monthly payments of \$51.04 each month.

Should an insured member die during the period of disability, his beneficiary will receive the balance of the insurance in a lump sum.

The payment of this insurance either in the event of death or total and permanent disability in no way interferes with, or takes the place of any compensation that might be due an insured member under the various workmen's compensation acts and laws.

Who may Insure.—All present members who are in good standing and actively engaged in their regular occupations are eligible. Members who are absent from duty for any cause whatsoever, may make application for this insurance immediately upon their return to work. New members joining the Brotherhood during the insurance campaign may make immediate application for this insurance. New members joining the Brotherhood after the completion of the insurance campaign will become eligible for insurance at the end of three months of membership.

No Medical Examination.—This insurance is available to all eligible members as described above, regardless of age, and without medical examination, provided they apply for the insurance during the present campaign. It

is available without medical examination to new members who apply within thirty-one days of the date they are eligible. Present members who do not make application within 31 days after the insurance becomes effective, and new members who do not apply within 31 days after they are eligible, will be required to pass a medical examination, satisfactory to the Metropolitan Life Insurance Company, at their own expense.

Conversion.—Should membership in the Brotherhood be discontinued, the group insurance will cease, but the insured member will have the privilege of obtaining from the Metropolitan Life Insurance Company, within 31 days after such termination, without medical examination, an equivalent amount of individual life insurance at rates applicable to the class of risk to which he belongs and to his age at that time.

Nursing Service.—The Metropolitan Life Insurance Company maintains in the larger cities and towns of Canada a visiting nursing service. Insured members who live where this service is available will be entitled to such service without charge. The nurse will call at the member's home, assist in carrying out the Doctor's instructions, advise his family regarding proper care, and do everything possible to make them comfortable.

Health Literature.—Insured members will also receive from time to time, booklets and pamphlets on health hygiene and disease prevention. This literature will be furnished by the Metropolitan Life Insurance Company, free of charge. Among the titles are, "First Aid in the Home," "How to be Happy and Well," "Care of the Eyes," "All about Milk," "Care of the Teeth," "Avoid Typhoid," "The Cook Book," etc.

European Labourers Flocking to France

The influx of labourers into France from other European countries, which has been in progress ever since the Armistice, continues unchecked, E. A. Masuret, office of U.S. Commercial Attache, Paris, reports to the Department of Commerce. The total foreign working population is now about 1,500,000, most of whom came from Central Europe. In 1924 the total number admitted was 239,365, while 47,752 left France, making a net addition of 191,613 workers during the year, including only those who pass the French frontier with a labour contract; many, doubtless, enter the country without such identification. Industrial labourers predominate as shown by the record of 197,196 for 1924, as against 42,189 agricultural workers.

Poles and Italians are in the majority among the foreign labourers. Work in the liberated regions, either in construction or in agriculture, has been given to 104,112 persons, of whom 46,844 were Italians, 23,217 Belgians, and 22,579 Poles. In the Nord and Pas de Calais departments, 170,000 workers are employed in the mills, of whom 35 per cent are Polish, Serbian or Hungarian. Belgians predominate in the textile industries, while Italians are engaged chiefly in agriculture.

The introduction of foreign industrial workers into France is authorized only when they have a labour contract which has been vised by the Minister of Labour for industrial or by the Minister of Agriculture for farm workers, an investigation being made in each case as to whether the admission of these workers will prejudice employment among the native labouring population.

There is employment for practically every

available workman in France at the present time. On September 3, 1925, the total number of unemployed receiving either Governmental or Departmental allowances was reported as 600. In addition to this number were 9,154 who requested work which could not be obtained. The total number of unemployed may, therefore, be considered as 9,754 at this time.

Jurisdictional Disputes Between Labour Unions

President William Green, of the American Federation of Labour, announced in October, that an agreement had been reached in the outstanding jurisdictional dispute between the bricklayers and carpenters' unions. This dispute had existed since 1911, when the earlier agreement terminated. The new agreement restores the agreement of 1911, and provides that hostilities are to cease immediately and that work is to be resumed. It was estimated that construction work in the United States and Canada to the value of about \$250,000,000 was delayed by the differences between the two branches of building labour.

The American Federation of Labour at its recent convention dealt also with a dispute between the Brotherhood of Railway Clerks and the International Brotherhood of Teamsters on the question of jurisdiction over chauffeurs. The former Brotherhood, with a total membership of 92,200, was suspended from membership in the Federation, unless within ninety days it should transfer to the Brotherhood of Teamsters all drivers, chauffeurs, stablemen and garage employees, hitherto under the jurisdiction of the Railway Clerks.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

The Apprentice Problem

The following article is taken from the *Quebec Chronicle* of October 15, 1925:—

It is a well known fact that the evolution of modern industry toward the greater use of machinery, and the growing desire of families to commercialize their children as early as possible, have brought about a crisis of apprenticeship almost everywhere. This constitutes a very great danger which threatens production, especially in France, a country of individualistic tradition and highly finished work, little fitted for the mechanical methods of the standard system.

The Chamber of Commerce of Paris has made an interesting effort to react against these methods and to furnish the working class with modern facilities, to form apprentices. It has brought its efforts to bear, first of all on that transition period which follows elementary school and precedes the workshop. It would be undesirable both from a professional and from a moral point of view, to rush children who leave school at the age of thirteen, into workshops, without any vocational guidance. In has therefore organized workshop schools, which while continuing the teaching of French mathematics and applied design, offer the children an opportunity to try out several manual trades of one group, and to make choice. During a period of six months, they are in succession, tinmen, fitters, blacksmiths, carpenters, etc. Then they make their selection and at the end of the year, having already had some training, they can enter workshops, and be of some use. The first workshop school was established in 1921; there are now six of them, which were opened in October 1924. Although of recent creation, they have already given results.

A first group of these schools takes up the training for trades connected with the hardening of iron, bronze, sheet metal, plate iron

or tinsplate, malleable metal like lead and finally wood in general. They initiate the candidate to the professions of fitter, mechanic and to all the small metallurgic crafts, to tin ware, copper ware, sheet iron, wrought iron and bronze carpentry, cabinet work, modelling and timber work. Each school has its own character; one for instance is more markedly artistic, whether the work be iron or wood, the other two tend more to form applicants for the building trade. Other schools prepare for the trades which require less strength; paper trade, bookbinding, leather manufacture, shoemaking and tailoring. There are sections for young girls where are represented the linen trade, dressmaking, millinery, embroidery, fur, etc., also laundry and ironing. Finally a compulsory course in domestic science prepares the pupils to take care of a family. There is besides, a commercial school, which forms salesmen and saleswomen, clerks, and window dressers.

On leaving the workshop schools, after a year of work, the young men begin their real apprenticeship. This period of their instruction is concerned more particularly with each branch of trade. But the Paris Chamber of Commerce does not lose its interest in them. It organizes associations for apprenticeships or special commissions for apprenticeships, which create corporative workshops for first year apprentices and professional courses for improvement. Finally the Chamber has created commercial schools, and subsidizes municipal vocational guidance bureaus and private institutions which give their attention to apprenticeship.

This enterprise has greatly interested the different unions which have contributed their professional experience and advice, and also financial help; while the public authorities, the Department of Technical Education and the Municipal Council of Paris, have granted subsidies and given the necessary quarters, free of charge.

Analysis of Paper Hangers' Trade

The Federal Board for Vocational Education, Washington, D.C., has recently published a complete analysis of the paper hangers' trade together with suggestive courses of training for apprentices and journeymen workers. Bulletin No. 102, the twenty-ninth number of the Trade and Industrial Series, contains sixty-two pages of very useful, condensed information which should be in the hands of every person having anything to do with apprenticeship or the training of workers in paper-hanging.

It is divided into five parts and contains four sketchmaps of the United States showing the distribution of paper-hanging schools and of centres offering instruction in metal-working trades, wood-working trades and automotive trades. Part I deals with the requirements, training problems and methods of securing and using instructional material. Part II covers the trade analysis in all its details. It includes six charts which present, in tabulated form, all the information concerning each job in connection with preparing walls, paste-table work, hanging paper, hanging mouldings, brush work and special operations. Part III indicates the methods of using the analysis in preparing courses and gives suggestive outlines for all types of day and evening courses. Part IV gives suggestive lesson plans and information for the instructor's note book. Part V contains a list of trade terms and a bibliography on house decoration and paper-hanging. The bulletin is prepared with the usual care and thoroughness of the Federal Board's publications and is a valuable contribution to the development of vocational education.

Apprenticeship in Wisconsin

According to the biennial report of the Industrial Commission of Wisconsin for the years 1922-24, the Wisconsin apprenticeship system established by law in 1915 as a result of the joint efforts of journeymen and employers has proved very successful. Under this law all minors who receive instruction in a trade as a part of their compensation for employment must be apprenticed under an indenture specifying the amount and kind of training to be given, and approved by the Industrial Commission. The Commission supervises the training of the apprentice and enforces the terms of the agreement. Practically every one of the larger manufacturing plants now employs a supervisor of apprenticeship and in Milwaukee a district director of apprenticeship has been appointed by the metal trades. The vocational (continuation) schools of the State are giving support to the scheme.

Up to June 30, 1924, nearly 1,000 apprentices had completed training periods averaging four years each and had received certificates of graduation from the industrial commission. On that date, 2,050 agreements were in force, involving about 70 occupations.

Vocational Guidance in Rome

The municipal authorities of Rome have decided to establish a vocational-guidance office with the following functions: To provide information to the children of the four higher

school grades on trades and occupations, by means of pamphlets, lectures, moving pictures, and visits to factories and work places; to familiarize the children and their parents with the requirements of the various occupations; and to ascertain the physical and mental fitness of the child. Detailed records, including both mental and physical data, will be kept for each child in the four grades.

Chicago to have College to Train Chefs

Chicago is to have the first training college for chefs in the United States, if plans of the American Caterers' Association are carried out. Mr. Jacob Miller, spokesman of the Association, says "There is a serious shortage of trained continental cooks throughout the world. Emissaries who have combed the old world for trained and experienced chefs in our behalf report that Europe can no longer furnish the sort of cooking talent we require here. We must draft out own chef material from native ranks, train it ourselves and place it before our ranges at salaries ranging all the way from \$10,000 to \$35,000 annually."

Organization of Vocational Guidance

A new book which should be of value to every person interested in vocational education or the welfare of young people entering industrial and commercial life is Dr. A. F. Payne's "Organization of Vocational Guidance." (New York: McGraw-Hill Book Company. Price \$3.50, 438 pages). It is divided into twenty-three chapters and contains nine appendices in the form of selected reading lists, bibliographies and special publications dealing with all phases of vocational guidance. The book presents in clear, concise form a summary of the principles, organization and application of the various kinds of guidance now in use, and concludes with an outline of some unsolved problems, the solution of which will determine the nature and extent of work in the immediate future. Separate chapters describe the functions of a director of vocational guidance and of a vocational guidance adviser, and the administration of a vocational guidance system. Considerable space is devoted to tests and measurements, and to the various methods of collecting and tabulating vocational information. While the book should be particularly valuable to school administrators, co-ordination officers, juvenile employment officers, child welfare workers and apprenticeship supervisors, it is not too technical for the lay reader and may well be given a place in any public library.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

International Conference on Accident Prevention

IN view of the interest shown on all hands in the question of industrial safety, arrangements are being made for a semi-official exchange of views on the subject among the delegates to the Seventh Session of the International Labour Conference. The countries represented were: Chile, Denmark, Esthonia, France, Germany, Great Britain, Hungary, Irish Free State, Japan, Latvia, the Netherlands, the Serb-Croat-Slovene Kingdom, and Switzerland. The discussions which took place showed, among other things, the importance of personal contact between the experts of the different countries and how progress is in certain directions dependent on international agreement.

The delegates who took part in this exchange of views held three meetings under the chairmanship of Sir Gerald Bellhouse, Chief Inspector of Factories in Great Britain. After taking note of the suggestions for the discussions which the International Labour Office had received from a number of Governments, they proceeded to deal with the following programme:

Indication of the weight on packages intended for transport by ship.

Statement of Sir Gerald Bellhouse on methods of accident prevention in Great Britain.

Measures for preventing the sale of machinery not equipped with recognized guards.

Handling of inflammable liquids.

Indication of the Weight on Packages Transported by Ship.—Before the war it was usual to mark the weight on packages transported by water. The practice has since been dropped but, as a certain number of the accidents which occur at ports are due to the overloading of hoisting gear, there are obvious reasons for returning to it.

The question having been raised by the Hamburg port inspection authorities, the German Ministry of Labour has drafted regulations prescribing that packages weighing 1,500 kilogrammes and upwards, if intended for transport by sea-going vessels, or 500 kilogrammes, if for inland shipping, shall have their weight marked on them. This measure would apply of course only to German ports. For a really effective solution of the problem it would be necessary to apply some such provisions in all countries by international agreement. The meeting was unanimous in recognizing the importance of the question and the need of common action. It therefore

suggested that the International Labour Office should study the question with a view to the possible adoption by the International Labour Conference of a Recommendation on the subject.

Statement by Sir Gerald Bellhouse on Accident Prevention in Great Britain.—The speaker described the organization and work of the British "Safety First" movement, which aims at reducing the large percentage of accidents due to subjective causes by the application of educational methods. The British National Safety First Association, a purely voluntary organization of as yet only about two hundred members but including some of the most important industrial undertakings in the country, has achieved remarkable results in creating interest in the movement and showing the importance of its aims. The Government is warmly supporting the principal of voluntary effort and endeavouring to arouse the interest of industrial circles in the movement and to promote collaboration between employers and workers in the effort to reduce the number of accidents.

Research in England into the exact causes of accidents is only in its beginnings, but the Industrial Fatigue Research Board has already reached interesting conclusions on the influence of fatigue, rate of output, and the mentality of the individual worker in causing accidents in industry, these conclusions being borne out by the result of similar work being done in the United States.

The meeting, while not adopting a formal resolution, expressed its opinion that the promotion of the safety movement was desirable and that research should be carried out into the causes of accidents.

Measures for Preventing the Sale of Machinery not Equipped with Recognized Guards.—A statement by the German delegation was the starting-point of the discussion on this subject. In Germany it has been suggested that the equipment of machines with the necessary safeguards before they are sold should be required by law. Such a measure, however, would have been premature; the law is too slow to follow the rapid progress of industrial technique. International competition is a further difficulty.

German industry has, however, recognized the need of laying down certain principles concerning the safeguarding of machines and of securing that the machines are protected before delivery, and general principles for the protection of machinery have been laid down by a joint industrial association. There is

not, however, any guarantee for the application of these principles, and unsafe-guarded machines, ostensibly destined for export, may still be seen at exhibitions, for instance. It is therefore desirable that the various countries should come to an understanding in order to secure that even machines for export are not sold until they are guarded. Such an understanding ought to be possible and a start should be made towards securing it.

The subsequent discussions brought out the great importance of this question, which is another instance of a problem only soluble by international agreement. It was pointed out in particular that the maker of a machine is in a much better position to protect it as it should be protected than the employer who purchases it. There is difficulty, however, in laying down general principles for the protection of machinery. Moreover, it is hardly possible to compel an employer who prefers a certain make of machine to purchase at the same time the guards supplied by another maker. The question is, therefore, a particularly delicate one and it will be necessary to prepare the way by careful preliminary investigations. The meeting accordingly suggested that the International Labour Office should submit the question to the Safety Sub-Committee of the Correspondence Committee on Industrial Hygiene.

Handling of Inflammable Liquids.—It was decided that this question should be dealt with by means of studies in the "Industrial Safety Survey." (LABOUR GAZETTE, May, 1925, page 482.)

Third International Congress for Life Saving and First Aid to the Injured

The Government has been invited to send delegates and to lend its support to the Third International Congress for Life-Saving and First Aid to the Injured, which is to be held at Amsterdam, September 7-11, 1926. The Congress is intended to provide a meeting-ground for all who, either professionally or otherwise, are interested in first-aid and life-saving work or in the prevention of accidents. The special purpose and object of the Congress is, by personal exchange of experiences and mutual encouragement, to further the benevolent objects in view.

The proceedings of the Congress will consist of: (a) lectures on subjects of general interest, to be delivered by prominent experts in general sessions; and (b) discussions, which will take place in special sectional sessions and arranged in connection with lectures, reports and demonstrations. It is intended to have sections for the following branches: medical first-aid in accidents; instruction of non-professionals in first-aid; first-aid and ambulance work in towns and in the country; first-aid

and ambulance work in land traffic (railway, motor car traffic, etc.); life-saving and ambulance work at sea, on coasts and on inland waters; first-aid and ambulance work in air-traffic; rescue and ambulance work in mines and industries connected therewith; first-aid and ambulance work in the fire-services; first-aid and ambulance work in mountains; first-aid and ambulance work in sport; the prevention of accidents in direct connection to life-saving and first-aid to the injured.

The Dominion Government has been requested to appoint one or more persons willing to communicate with the Netherland Committee with a view to creating a National Canadian Committee in support of the forthcoming Congress in Amsterdam. The leading organizations concerned with the promotion of safety work in Canada have been invited to advise the Government on the proposal that the Dominion should participate in the forthcoming convention.

Value of Organized Accident Prevention

The Canadian Mining Journal, in its issue of October 23, quotes a paper read by Mr. William Conibear at a recent meeting of the Lake Superior Mining section of the National Safety Council. Of particular interest are the references to the improved record made after 1911, when safety departments were organized at several mines:—

"The mines of the Lake Superior district from 1911 to 1923, inclusive, employed 563,134 men and reported 1,742 men killed. The fatality rate therefore was 3.09 per thousand. This is 17 per cent less than the rate for the metal mines and 23 per cent less than the rate for the coal mines in the United States, as reported for the same period. If the average fatality rate which occurred at the iron mines of Michigan from 1901 to 1910, had prevailed throughout the entire district from 1911 to 1923, we would have sustained an additional loss of 899 men.

"The value of this conservation of life cannot be measured in dollars and cents—it is inestimable. It is this evidence, however, that proves that accident prevention is possible. While it is a slow process, we may reasonably expect that our record in the future will be better than that of the past."

While the comparison here made is not, owing to the poor records of accidents prior to 1911, a perfectly fair one, it illustrates very well the effect of organized effort to decrease the accident rate. For the period since 1911 more fairly comparable records have been kept and it is pleasing to learn that: "The average fatality rate for all mines of the district during the second period (1917-1923) was 15½ per cent less than the rate for the first period (1911-1916), based on the number of men employed.

Accident Risks in Ontario Lumber Industry

The Hon. Dr. Godfrey, minister of Labour and Health in Ontario, recently called attention

to the excessive number of accidents in the lumbering camps in Northern Ontario. Last year this industry employed approximately 30,000 men and of this number 4,724 were injured. The provincial administration has secured the co-operation of practically all the services in the Department of Health in an endeavor to reduce the number of accidents, and the number of cases of infection following accidents. Dr. Godfrey intimated that if lumbermen did not take precautions, it was the intention of the Department to take some compulsory action to bring about a more favourable showing in the matter of decreasing the frequency and severity of casualties. It is asserted that the accident experience and accident cost in the lumber industry in Ontario is so heavy that 50 cents is added to the cost of each thousand feet of sawn lumber and 30 cents to the cost of each cord of pulpwood.

Referring to the minister's statement the *Canada Lumberman* quotes from an article contributed to one of its recent issues by Mr. Samuel Price, the former chairman of the Provincial Workmen's Compensation Board. Mr. Price states that the experience and accident cost in the Ontario lumbering industry in 1924 had been the worst in its history and that the total outlay had been growing during the last few years. In 1924 the figures were not only considerably the highest in the actual amount that the Workmen's Compensation Board ever had, but in view of the fact that there had been a general decline in wages as compared with the earlier years, for which figures are given, and that compensation should naturally decrease with the decrease of wages (being for the most part a percentage of wages), the showing was particularly bad.

While both logging and saw mill operations present a bad experience, the logging or woods operations compared with prior experience are much worse. The number and the seriousness of the accidents that have happened in the falling of trees is especially startling. Another outstanding fact is that the smaller operators both for logging and saw mills have a considerably larger accident cost proportionately than the larger ones.

Accident Prevention in Steel Industry

Mr. J. E. Culliney, safety engineer of the Bethlehem Steel Corporation, states in *Safety Engineering* that the Corporation, which is one of the large employers of labour in the State of Pennsylvania, with from 60,000 to 70,000 operatives on its payroll, in steel mills, shipyards, and mines, has been able to greatly reduce the number of accidents through a well-organized educational programme.

The problem of educating the workers in accident prevention has been handled in several ways. Accident prevention campaigns are conducted, instruction in first aid is given, and live safety committees are functioning in each plant. These latter are made up of workers in the plants, who are selected because of their interest in, and knowledge of safety work. In addition to performing their regular tasks, these men are safety inspectors who spread the gospel of accident prevention in their departments.

When the steel plant at Lackawanna was taken over by Bethlehem a couple of years ago, the manager appointed a safety committee of thirty employees to assist him and his staff in preventing accidents. In eighteen months the number of "lost time" accidents has been reduced 20 per cent. In the Bethlehem plants as a whole the time lost on account of accidents has been reduced 40 per cent in the last eight years. During the same period the number of fatal accidents has decreased 25 per cent.

Eight years of this safety work have borne fruits for Bethlehem that give the corporation high hopes of what it may expect to accomplish in the future. The number of accidents today is only about half what it was when the work started eight years ago. Certain types of severe injury that once were common—for example accidents to the eyes of the workmen—are now practically unknown. Of accidents that still occur, the largest number are the result of handling material or tools, and of tripping or falling. Such casualties are now most often due to someone's thoughtlessness, and it is believed that the continuance of the present educational program will mean the reduction of accidents in the Bethlehem plants to a point where iron and steel work will be as safe as work in less hazardous occupations.

Limiting Use of Lead Paints

The British Home Secretary recently gave notice that he has certified the painting of vehicles with lead paints to be dangerous, and that he will make regulations to apply to all factories and workshops in which such painting is carried on. This regulation is in accordance with the recommendations made in 1923 by a departmental committee on industrial paints. Some of these recommendations may be quoted from the *Ministry of Labour Gazette* for April, 1923 as follows:—

The committee "do not support the recommendation that the use of lead paint for the painting of buildings should be entirely prohibited. They are satisfied that there is at present no efficient substitute for lead paint

for outside painting and for certain kinds of internal painting. At the same time they hold that the statistics of lead poisoning, arising from the use of lead paint, are sufficiently serious to make it most desirable to limit its use as far as practicable, and, where it is used, to make its use subject to statutory regulations. They accordingly recommend that legislation should be passed to give effect to the principles contained in the Geneva Convention, 1921, and that regulations to deal with the continued use of lead paint should be brought into force at the earliest possible moment.

"As regards the use of paints in other industries (e.g., coach and wagon painting, preparatory priming work in joinery establishments, ship painting, and the like), the Committee recommend that the use of paints should be made subject to regulations (power to make which already exists); and that in particular the dry rubbing down of lead paint should be made illegal. As regards internal painting on shipboard, they recommend that the regulations should make provision for adequate ventilation, whether lead paints are used or not, to counteract the effect of the fumes of paint thinners (turpentine, etc.)."

FIRST AID CHAMPIONSHIP COMPETITION ON CANADIAN PACIFIC RAILWAY SYSTEM

COMPETITIONS in First Aid to the Injured for Canadian Pacific Railway trophies, representing the championships of the various districts of the system, eastern lines, western lines and all-lines, among employees of the Company, are annually conducted by the Canadian Pacific Railway Council of the St. John Ambulance Association. Each team taking part in the contests is composed of five men who hold First Aid certificates or higher awards.

The first series of competitions held are those to decide the championship team of each District. There is no limit to the number of competing teams in these competitions, but the men composing them must be employed in the District represented by the trophy for which they compete. The winning team in these competitions then compete for the trophies representing the championship of Eastern or Western Lines, as the case may be.

When the Eastern and Western Lines champions have been established, these two teams meet to compete for the Grand Challenge Cup, a beautiful trophy representing the All-Lines championship.

The tests given this year dealt with—

- Spinal injury in roundhouse pits.
- Injuries resulting from aeroplane accidents.
- Men falling through glass roofs of railway station concourses.
- Asphyxiation from gases in garages—and other forms of accidents which might at any time occur at work, at home or in sport.

The Eastern Lines Districts of the Canadian Pacific Railway, with the First Aid trophies donated for competition on them, are as follows:—

New Brunswick District, Downie Cup.

Quebec District, Gutelius Cup.

Ontario District, Osborne Cup.

Algoma District, Scully Cup and Taylor Shield.

Angus Works, Montreal, which for First Aid purposes is a District in itself, Johnson Cup.

The Western Lines Districts and trophies are—

Manitoba District, Hall Cup.

Saskatchewan District, Scully Cup.

Alberta District, Price Cup.

British Columbia, Busteed Cup.

In the 1925 District competitions the Canadian Pacific Railway McAdam, N.B. team, composed of the undermentioned persons, won the Downie Cup, gaining 420 points out of a possible 450. Two other teams took part in the competition:—W. F. Bailey (Captain), William Dawson, Cameron Bogart, G. W. Gehan, Chas. W. Lee.

The Windsor Street Station, Montreal, police team, made up of the members mentioned below, carried off the Gutelius Cup with 385 marks out of a possible 450. (Two other teams competed):—H. W. Bailey (Captain), T. A. Griffiths, P. J. Keogh, E. G. Wykes, E. C. Hibbert.

The Toronto General Freight Office team, made up of the following persons, won the Osborne Cup, taking 356 marks out of a possible 450. One other team was entered in the contest:—Alfred T. Curle (Captain), C. W. Sellen, W. T. Warren, W. J. Turk, H. H. Braid.

The Chapeau, Ontario team, whose personnel is given below, won the Scully Cup and the Taylor Shield by obtaining 333 points out of 450. One other team competed:—A. L. Smith (Captain), R. K. Smith, E. R. Moneriff, H. Searle, V. Goldstein.

Although no competition was held at Angus Works this year, an excellent team is maintained among the constables at that point. Its members are:—Geo. Curtis (Captain), Francis Pettit, Thomas O'Neill, Alfred Edes, Jesse Holmes.

Despite the fact that no "District" competition was held at Angus Works, it was felt that this team should not be debarred from taking part in the Eastern Lines competition.

The five teams above-mentioned competed for the championship of Eastern Lines, represented by the Lord Shaughnessy (Eastern Lines) Shield. The McAdam team won this competition by obtaining 478½ marks out of a possible 565.

On October 15 the McAdam team competed against the Western Lines champions—the Winnipeg, Weston Shops No. 2 team, winners

of the Lord Shaughnessy (Western Lines) Shield—for the All-Lines trophy, but lost to the Westerners by a margin of 8 points, gaining 499 marks out of a possible 672 whereas the Winnipeg team made 507. The McAdam team were the 1924 All-Lines champions.

The Winnipeg team, the new holders of the Grand Championship Challenge Cup was as follows:—T. Mansbridge, H. Shaw, E. J. Bull, W. Reynolds (Captain), F. Perkins, and T. R. Miller (Reserve). Ten teams took part in the Western lines competition, representing Winnipeg, Man., Brandon, Man., Saskatoon, Sask., Sutherland, Sask., Calgary, Alta., Lethbridge, Alta., Edmonton, Alta., Strathcona, Alta., Nelson, B.C., and Vancouver, B.C. The Winnipeg team had already won several other First Aid trophies in Manitoba this year.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Meeting of the Governing Body

THE Governing Body of the International Labour Office held its twenty-ninth session in Geneva from October 15 to 17. Dr. W. A. Riddell, Dominion of Canada Advisory Officer in Geneva, attended on behalf of the Honourable James Murdock, Minister of Labour. Mr. Tom Moore, President of the Trades and Labour Congress of Canada, who was chosen in June last as one of the six workers' delegates on the Governing Body, was also present.

A list was prepared of subjects which might be placed on the agenda of the tenth session of the International Labour Conference, which is to meet in 1927, as follows: sickness insurance; annual holidays with pay for workers; the enforcement of the principle of freedom of association; methods of fixing a minimum wage in certain industries which are insufficiently protected from the occupational point of view; and accident prevention. The Governing Body will in January next choose from this list the subjects which are to be finally maintained on the agenda.

The International Labour Office was instructed to make a general survey of conditions of life and work in the various countries of Asia from the point of view both of hours of work and of wages levels. The Office was also instructed to prepare a report describing the various classes of agricultural workers in each country and the principles upon which they are organized and, where this is the case, represented in national institutions. An enquiry was also authorized into conditions of work in the coal-mining industry with the aim

of making an explanatory and comparative study of all available information concerning hours of work, wages and annual holidays in this industry in the various countries in which coal mining is carried on.

The Governing Body appointed May 25, 1926, as the date of the opening of the next Session of the International Labour Conference, which is to be held in Geneva.

In response to an invitation from the Polish Government, the Governing Body decided to hold its next session in Warsaw on January 26, 1926.

Australia and the Conventions

In reply to a question in the Australian House of Representatives, the Prime Minister gave the following information:—

Of the decisions adopted by the International Labour Conference, five of the Conventions and five of the Recommendations come within federal jurisdiction. These are as follows: the three Genoa Conventions (1920); the two Geneva Maritime Conventions (1921); the Genoa Recommendations (1920); and the Fourth Session Recommendation (1922) concerning migration statistics.

One Convention, namely, the Draft Convention for establishing facilities for finding employment for seamen (Genoa, 1920), the provisions of which are covered by existing legislation, has been ratified. The question of the ratification of the other four is still under consideration. As regards the Recommendations, one of these, the Fourth Session (1922) Recommendation concerning communication to the International Labour Office of statistical and other information regarding emigration, immigration and the repatriation and transit of emigrants, is being complied with by the Commonwealth; the other four are inapplicable or are unnecessary under Australian conditions, and the League of Nations has been advised accordingly.

Eleven Conventions and sixteen Recommendations have been sent to the State Governments for any

legislative or other action they might see fit to take. The States were requested to inform the Commonwealth Government of what action they have taken to give effect to the different instruments adopted by the International Labour Organization. This request has been complied with in respect of most of the Conventions and Recommendations and the information so received has been duly communicated to the League of Nations.

The Prime Minister also answered a question concerning the ratification of the White Lead Convention. After explaining that Article 405 of the Treaty of Versailles allows a federal State to treat a Convention as a Recommendation, he added:—

The Convention dealing with the use of white lead in paint is one which comes within the jurisdiction of the States, and the question of its ratification does not therefore arise.

Decisions of League of Nations Assembly Affecting Labour

The Sixth Assembly of the League of Nations which was held in Geneva during September, took several decisions of interest to the International Labour Organization.

In the first place, the Assembly adopted, at the instance of the French delegation, a resolution in favour of the holding of an international conference to investigate the economic difficulties which stand in the way of the revival of general prosperity, and to ascertain the best means of overcoming these difficulties and preventing disputes. The Council of the League was invited to set up a Committee which, with the assistance of the technical organizations of the League and the International Labour Office, would prepare for such a Conference to be held under the auspices of the League.

In the second place, the Assembly received a report of the International Labour Office on the work accomplished for refugees since the beginning of 1925, expressed its great appreciation of this work, and recommended that, subject to the approval of the Governing Body of the Office, provision should be made for the establishment of additional agencies for the Refugees Service in South America. In supporting this decision, the Duchess of Atholl (Great Britain) spoke in cordial terms of the results already achieved by the Office in placing 18,000 refugees in nine months. Measures were also approved for giving effect to proposals arising out of the mission of Dr. Nansen to Armenia in connection with the settlement of refugees there.

Finally, after careful examination by the Fourth (Financial) Committee, the Assembly adopted without change the budget estimates for the International Labour Office for 1926, viz., 6,780,338 francs.

Recent Ratifications

The total number of ratifications of Draft Conventions of the International Labour Conference registered with the League of Nations is now 182. This figure includes two conditional ratifications of the Eight-Hour Day Convention by Austria and Italy respectively, and shows an increase in five months of 36.

The Government of Finland has recently communicated to the Secretary-General of the League of Nations its ratification of three Draft Conventions as follows:—

1. Fixing the minimum age for admission of children to employment at sea;
2. Fixing the minimum age for admission of young persons to employment as trimmers and stokers;
3. Concerning compulsory medical examination of children and young persons employed at sea.

These three Conventions have now been ratified, respectively, by 13 States, 11 States and 11 States. In addition, three ratifications of the first Convention and two each of the second and third have been authorized and are pending.

Eight-Hour Day Convention

An important step in connection with the ratification of the Eight-hour Day Convention of the International Labour Conference (1919) is marked by the submission to the Belgian Parliament of a Government bill providing that the Convention "shall have full and complete effect in Belgium." In an explanatory memorandum the Belgian Government recommends the unconditional ratification of this Convention and adds that "those who in other countries are striving for this great reform (the eight-hour day) will find in Belgium's action a fresh and important argument to support their cause".

While the Belgian Government has thus recommended unconditional ratification, the French Government has secured unanimous consent of the Chamber of Deputies to a bill for ratification of this same Convention, subject to the reservation that the obligations which it entails for France shall take effect only when it has been ratified also by Germany.

The subject matter of this Convention was debated exhaustively by the British Parliament at the last session and the Minister of Labour announced later that he was in informal communication with other ministers of labour with a view to seeing what can be done "in order to go forward". It is understood that preliminary steps are being taken

towards arranging for a conference between five of the principal industrial states of Europe, namely, Great Britain, France, Belgium, Italy and Germany, looking to a common understanding on this subject.

Migration Movements, 1920-1923

The International Labour Office, Geneva, has just published a study of international statistics of world migration movements, 1920-1923. This study is a first attempt at international statistics, and improvements are no doubt possible and will be sought in future, yet it is felt that this general survey contains new information on the various currents of migration and the composition of the groups of persons of which they are made up, and that it should serve as a serious scientific basis for the future extension of migration statistics. Its preparation has already had the useful result of inducing several states to make or contemplate important improvements in their methods. They have tried, or propose, to bring these into closer conformity with the provisions of the Recommendation concerning information on migration adopted by the International Labour

Conference in 1922, and thus to effect a greater uniformity. The study should also be of immediate practical value. It throws light on the development of migration after the war, and offers a basis for that research into causes and effects which is essential for the adoption of a more systematic policy, whether international or national in scope. In addition, countries of emigration and of immigration alike will find information on the origin, destination, and composition of the groups of migrants, and thus obtain material for a policy of effective rivalry or useful collaboration, as the case may be, with other states. Finally, there is scarcely any need to draw attention to the interest of such statistics to employers, workers, transport undertakings, private organisations for protecting migrants, etc., particularly at a time of world economic disturbance.

The information obtained was centralised by the Migration Section of the International Labour Office of which Professor Louis Varlez is the head. The work of examining the data received, interpreting, completing and co-ordinating them, was entrusted to Dr. Imre Ferenczi, the author of the report under discussion.

Co-operative Coal Mine at Shilbottle, Northumberland

A recent issue of the *Co-operative News* (Manchester) gives an account of the Shilbottle Colliery, lately acquired by the Co-operative Wholesale Society of Great Britain. "Since the Co-operative Wholesale Society purchased Shilbottle an entirely new colliery has been created, and the three-and-a-half million co-operators in England and Wales are now not only colliery owners on a very considerable scale, but the owners of an up-to-date model colliery. For the next hundred years at least the co-operative democracy holds the mining rights over more than 3,000 acres, giving a hold on an estimated total of something like nine million tons of coal. The quality of this coal is famous. Independent analysis shows less than 4 per cent of ash as against an average residue of 10 per cent. The difference means more burning quality, more heat and power in Shilbottle coal. The new mine, unlike the old, goes down to the centre of this coal area, 1,000 feet deep. From the shaft bottom, a double roadway 12 feet wide and 9 feet high, bricked and steel-supported leads to single roads, 6 feet 6 inches high, when the face of the main 2 feet 6 inches seam is gained. Not only is the pit kept dry, but, thanks to abundant ventilation and general care, naked

lights can be used at the face, and even flashlight photographs taken.

"Besides creating a model mine, the Co-operative Wholesale Society has built a new village, most pleasantly situated in undulating fertile country, having sea views towards Alnmouth Bay. These new houses are only eight to the acre; each has three bedrooms and bath; and in accordance with the county custom they are occupied by married Shilbottle colliers rent free. Free coal is also supplied the Co-operative Wholesale Society. The colliery is a great asset for the co-operative movement especially in the Newcastle district. The realization of that asset by means of a full daily output is the big further essential to success. The co-operative movement, and particularly the miners in it, have it in their power to give the answer. Years past co-operative coal mining failed. Trade union coal mining also failed. Numbers of interested persons evidently expect it to fail again. But given a reasonable freedom for the Co-operative Wholesale Society to work in relation to whatever trade union conditions exist for the pits of the county, the critics of co-operation will receive a reply that should be complete, with success for its last work."

THE EMPLOYMENT SITUATION AT THE BEGINNING OF OCTOBER, 1925, AS REPORTED BY EMPLOYERS

CONTINUED improvement in the employment situation was indicated by the firms reporting to the Dominion Bureau of Statistics at the beginning of October, when the staffs of the 5,923 firms making returns were increased by 13,315 persons to 809,072. This is the largest absolute increase recorded on October 1 of any year since 1920, adding over twice as many workers to payrolls as did the gain shown on the same date of 1924. The index number of employment stands at 98.3 as compared with 96.6 on September 1, 1925; and with 93.9, 99.5, 94.6 and 90.2 at the beginning of October, 1924, 1923, 1922 and 1921, respectively. Manufacturing, logging, mining, transportation and trade were more active, but employment in construction and services showed a seasonal falling-off on the date under review.

The accompanying chart illustrates the course of employment since 1923; the curve, it will be noted, is higher than at the same time last year, although it continues to be a little lower than in 1923, when the trend was downward.

Employment by Provinces

Activity increased in all except the Maritime Provinces, the largest gain being recorded in Ontario.

Maritime Provinces.—Considerable losses in highway construction, together with comparatively small reductions in summer hotels and steam railway operation, caused a decline in the Maritime Provinces that was partly offset by improvement in iron and steel and food factories, logging camps, and coal mines. The result was a decrease of 713 persons in the payrolls of the 513 firms making returns, who employed 65,247 workers on October 1. At the same time last year, additions to staffs were noted, but the index number was practically the same as on the date under review.

Quebec.—Further improvement was registered in Quebec, where employment has increased steadily since the beginning of the year. The situation is more favourable than on October 1, 1924, when slight declines were indicated. Statements tabulated from 1,270 employers showed that they had 225,601 workers as against 222,896 at the beginning of September, 1925. Manufacturing, logging, mining, shipping and stevedoring, building construction and trade reported the largest gains. Within the manufacturing division, the boot, shoe, textile, electrical apparatus, food, musical instruments, rubber and building

material industries increased their staffs most extensively, while sawmills recorded the only noteworthy losses, which were of a seasonal character.

Ontario.—Manufacturing and logging showed substantial increases, but there were decreases in metallic ore mining, transportation and construction. Of the gains in the manufacturing industries, those in iron and steel, vegetable foods, and textiles were especially pronounced, but improvement was also indicated in boots and shoes, musical instruments, rubber, electrical apparatus and non-ferrous metals. Lumber mills, on the other hand, registered seasonal curtailment. The working force of the 2,720 firms reporting aggregated 335,061 persons, or 7,218 more than on September 1. Although somewhat greater expansion was indicated at the beginning of October last year, the index number then was lower.

Prairie Provinces.—Employment in the Prairie Provinces showed an upward movement, according to 765 firms whose payrolls included 105,966 workers, as compared with 102,263 in the preceding month. Activity had diminished at the same time in 1924, and the index number then was more than eight points below its present level. Iron and steel plants, coal mines, transportation and trade were decidedly busier. Summer hotels, saw-mills, highway and railway construction, on the other hand, were seasonally slacker.

British Columbia.—Continued though smaller increases were noted in British Columbia, where 402 persons were added to the staffs of the 655 reporting firms, whose returns showed 77,197 workers. Logging camps made the most noteworthy gains, but the lumber, pulp and paper, iron and steel, and non-ferrous metal industries were also more fully engaged. Food and electric current plants, construction and services however, showed seasonal reductions in personnel. A distinctly downward tendency was indicated on October 1 of last year, when the index number was over 10 points lower.

The accompanying table gives index numbers of employment in the five economic areas into which the country is divided in these statistics.

Employment by Cities

The situation in the eight cities for which separate tabulations are made was better than at the beginning of September.

Montreal.—The trend of employment in Montreal continued to be upward; manufac-

turing generally, construction, transportation and trade recorded heightened activity, while the only reductions of any size were in communication. Within the manufacturing group, boot and shoe, musical instrument, food and electrical apparatus plants recorded the great-

TABLE I—EMPLOYMENT BY ECONOMIC AREAS

(Number employed by the reporting firms in January, 1920=100)

District	Relative Weight	Oct. 1, 1925	Sept. 1, 1925	Oct. 1, 1924	Oct. 1, 1923	Oct. 1, 1922	Oct. 1, 1921
Maritime Provinces.	8-1	88-1	88-4	88-3	97-0	91-8	93-1
Quebec.....	27-9	102-7	101-3	97-6	104-0	92-0	89-2
Ontario.....	41-4	94-7	92-7	91-6	96-0	93-6	85-9
Prairie Provinces....	13-1	99-8	96-0	91-4	100-7	101-9	100-0
British Columbia...	9-5	114-8	114-2	104-0	104-2	100-1	96-4
Canada.....	100-0	98-3	96-6	93-9	99-5	94-6	90-2

est gains. The working force of the 689 firms making returns aggregated 112,881 persons, as compared with 110,771 on September 1. The gains noted at the same time last year were on a smaller scale, and the index number on October 1, 1925, was higher than at any time since the record for the city began in 1922

Quebec.—Manufacturing and shipping afforded more employment; the 90 Quebec employers whose statistics were received had 8,898 workers, or 312 more than in the preceding month. Improvement was also recorded at the same time last year, but the index number then was slightly lower.

Toronto.—Further expansion in employment was indicated in Toronto; textile, electrical apparatus, vegetable food, and musical instrument factories, telephones, local transportation and services reported gains, but construction work was slightly curtailed. Statements were tabulated from 784 firms having 97,031 employees, as compared with 95,641 on September 1. The situation was more favourable than at the beginning of October, 1924, when there were additions to staffs on a slightly smaller scale.

Ottawa.—there was an increase of 281 persons in the payrolls of the 127 firms making returns in Ottawa, who employed 10,703 workers. The gains took place chiefly in the construction industries, while lumber mills showed a seasonal reduction. Activity was somewhat greater on October 1, 1925, than at the same time last year, when no change was reported.

Hamilton.—Continued improvement was registered in Hamilton; iron and steel and food factories absorbed most of the additionally employed workers, but there were minor

gains in a large number of industries. Returns were compiled from 197 employers having 26,805 persons on their pay rolls as compared with 26,318 on September 1. Employment was in greater volume than at the beginning of October, 1924, when the tendency was also upward.

Windsor.—Automobile factories recorded further gains in employment, while little change was shown in other groups. A combined staff of 10,382 workers was employed by the 79 firms reporting; they had 9,535 employees in the preceding month.

Winnipeg.—Trade and manufacturing were brisker, while there were rather slight contractions in construction. The working force of the 288 reporting employers included 25,050 persons, a gain of 212 as compared with their September report. Employment was on a higher level than on October 1 a year ago, when there was also a favourable movement.

Vancouver.—Another moderate increase was shown in Vancouver, 232 firms having 24,820 employees, as against 24,681 in the preceding month. The situation was very much better than on the same date of last year; it was in fact, more favourable than at any time since the record for the city began in 1922. Tin can and lumber factories and construction afforded more employment on October 1, 1925, than on September 1, but canneries were rather slacker.

The following table gives index numbers of employment by cities. The column headed "Relative Weight" in this table shows the proportion that the number of employees reported in each of the indicated cities bears to the total number of employees reported in Canada by the firms making returns on October 1, 1925.

TABLE II—EMPLOYMENT BY CITIES

(Number employed by the reporting firms in January, 1925=100)

City	Relative Weight	Oct. 1, 1925	Sept. 1, 1925	Oct. 1, 1924	Oct. 1, 1923	Oct. 1, 1922
Montreal.....	14-0	99-4	97-3	93-7	98-7	92-3
Quebec.....	1-1	100-3	97-4	98-8
Toronto.....	12-0	89-8	88-5	86-4	90-1	90-9
Ottawa.....	1-3	101-8	98-5	100-8	105-5
Hamilton.....	3-3	88-3	86-9	80-4	91-1
Windsor.....	1-3	94-8	85-6
Winnipeg.....	3-1	89-4	88-0	86-1	89-4	93-8
Vancouver.....	3-1	113-9	113-9	104-0	101-6	100-7

Manufacturing Industries

Employment in manufacturing showed a further upward movement, the gain of 8,778 persons being the largest increase this division has recorded on October 1 of any year since

1920. The 3,828 manufacturers reporting had 449,016 operatives, as compared with 440,238 on September 1. Iron and steel registered very marked improvement, especially in rolling mills, automobile and railway car plants; the textile, edible plant products, boot, shoe, musical instrument, rubber, electrical apparatus and non-ferrous metal industries were also much more active. On the other hand, fish canning and preserving, lumber and electric current works released employees, the declines in the two industries first named being of a seasonal character. The index number was higher by nearly six points than on October 1, 1924, when considerable additions to staffs were also noted.

ning of October of a year ago, but employment was on a higher level than at that time.

Musical Instruments.—Further additions to staffs, chiefly in Quebec and Ontario, were made by the 39 establishments reporting in this division. They had 2,954 workers, or 338 more than in the preceding month. This increase is greater than was the gain registered on October 1, 1924, when the index number was slightly lower.

Plant Products, Edible.—Continued expansion on a large scale was recorded in these industries at the beginning of October, fruit and vegetable canneries, chocolate, confectionery and biscuit factories, flour and cereal mills reporting the greatest gains. All provinces

Animal Products, Edible.—Dairies and fish preserving establishments were slacker, while meat packing plants afforded increased employment. The net contraction affected approximately the same number of workers as that registered on the same date of last year, when the index number was lower. Statements were tabulated from 176 firms whose payrolls declined from 16,169 persons on September 1, to 15,527 at the beginning of October. A large number of the workers released were in British Columbia.

Leather Products.—Continued improvement, exceeding that recorded at the same time last year, took place in the leather industries, mainly in boot and shoe factories in Quebec and Ontario. According to turns from 195 manufacturers, they employed 16,424 workers, or 485 less than in the preceding month.

Lumber and Products.—Pronounced seasonal curtailment of operations was indicated in lumber mills in all provinces except British Columbia. Furniture factories, however, were busier. A combined working force of 56,307 persons was reported by the 728 manufacturers making returns, who had 57,954 employees on September 1. This reduction was rather larger than the decrease recorded at the begin-

ning of October of a year ago, but employment was on a higher level than at that time.

except British Columbia shared in the improvement, which was most noteworthy in Ontario. The payrolls of the 317 firms reporting in this group rose from 29,097 on September 1 to 31,753 at the beginning of October. The additions to staffs made at the same time last year affected only about half as many workers, and the situation then was much less favourable.

Pulp and Paper Products.—Varying conditions in different divisions of the pulp and paper industry produced a net decline of 53 persons in the working force of the 466 firms making returns, these firms employing 52,746 workers. Pulp and paper mills were slacker, but printing, publishing and paper goods afforded increased employment. Curtailment was noted in the Maritime Provinces, Quebec and Ontario, while elsewhere there was a favourable tendency. Although expansion was indicated on October 1, 1924, the index number then was slightly lower than at the present time.

Rubber Products.—Continuing the improvement that began in January and has recorded uninterruptedly since then, employment in rubber factories increased on October 1. Reductions in personnel were noted at the beginning

of October of last year, and the index number was higher than at anytime in the last four years. Returns were compiled from 30 manufacturers of rubber products employing 13,139 hands, as compared with 12,829 on September 1. The gain was largely confined to Quebec and Ontario.

Textile Products.—There was a substantial increase in the number of persons employed in the textile industries at the beginning of October, but the expansion was considerably smaller than that indicated at the same time in 1924. Nevertheless, the situation this year was better than it was then. According to statistics received from 511 establishments, they employed 68,424 workers, or 1,432 more than in the preceding month. Cotton, thread, hosiery, knitting, garment and other factories afforded greater employment chiefly in Ontario and Quebec.

Electric current.—Further and somewhat greater declines were recorded in plants producing electric current in British Columbia, Quebec and Ontario. An aggregate working force of 12,246 persons was employed by the 86 companies making returns; they had 12,756 employees at the beginning of September. Curtailment on a smaller scale was indicated on October 1, 1924, but the index number then was a few points lower than at the present time.

Electrical apparatus.—Repeating the movement noted at the same time last year, electrical apparatus works increased their payrolls on October 1; the gain this year was, however, considerably larger than it was then, the index number standing this year at 117.3, as compared with 112.1 on October 1, 1924. Thirty-six employers reported 9,320 workers, as against 8,669 in the preceding month. Factories in Quebec and Ontario absorbed practically all the additionally employed workers.

Iron and steel products.—Continued improvement was reported in this division, rolling mills, automobile and railway cars shops, in particular, showing important gains. Agricultural implements, machinery, heating appliance, iron pipe and hardware factories were also busier. Statements were tabulated from 642 manufacturers having 115,560 workers in their employ as against 110,286 on September 1. All provinces except Quebec shared in the expansion, which was, however, most noteworthy in Ontario and the Maritime Provinces. Smaller increases took place at the beginning of October a year ago; the index this year was several points higher than it was then.

Non-ferrous metal products.—Lead, tin, zinc, copper and other divisions of the non-ferrous metal group afforded greater employment, mainly in Ontario and British Columbia. Very

little change in the situation was recorded on October 1, 1924, when employment was on a lower level. The working force of the 102 manufacturers making returns aggregated 11,761, as compared with 11,342 at the beginning of September, 1925.

Mineral products.—Contrary to the upward tendency indicated on October 1, 1924, there was a decline in employment in this group on the date under review; 103 persons were released from the payrolls of the 74 reporting firms, whose staffs included 10,032 workers. Ontario registered the contraction. Conditions were very slightly better than at the same time last year.

Logging

Further seasonal gains were noted in all provinces in logging; 207 firms enlarged their working force from 15,128 on September 1 to 19,434 at the beginning of October. Although this increase exceeded that which took place on the same date last year, the index number then was higher.

Mining

Coal.—Considerable recovery from the losses registered in the preceding month were noted in logging on October 1, 1,600 persons being added to the staffs of the 91 reporting operators. They employed 24,573 workers. Employment on October 1, 1924, showed a downward trend, but the index then was above the level of this year.

Metallic ores.—There was a large decline in employment in metallic ore mines in Ontario. Statements received from 45 firms showed that they employed 13,126 persons, as compared with 13,993 at the beginning of September. Moderate improvement was indicated at the same time last year, and the index number was somewhat higher.

Non-metallic Minerals other than Coal.—According to 74 employers in this division, they enlarged their working forces by 148 persons to 6,833 on October 1. The gain took place almost entirely in asbestos mines and quarries in Quebec. A minor increase in employment was also noted at the beginning of October a year ago, but the situation then was less favourable.

Communication

Employment on telephones showed a slight gain, but there were larger reductions on telegraphs, with the result that there was a net decline of 101 persons in the working forces of the 186 companies reporting; they employed 23,786 persons. Somewhat more extensive losses were indicated on October 1, 1924, but the index number then was not quite as high as at the same date this year.

Transportation

Street Railways and Cartage.—Seasonal activity on a rather larger scale than on the same date last year was indicated by cartage companies generally and in grain elevators, in the Prairie Provinces. Reports were received from 109 firms in this group, whose staffs aggregated 20,020 persons, or 715 more than in the preceding month. This increase was much larger than the gain recorded at the beginning of October last year, and the index number in 1925 was somewhat higher.

Steam Railway Operation.—Continued expansion was noted in railway operation, mainly in the Prairie Provinces, where the movement of the harvest had commenced. The payrolls of the 102 employers whose statistics were received aggregated 77,586 persons, as compared with 76,071 in the preceding month. Curtailment of operations was shown on October 1 a year ago, and the index then was about two points below its level in 1925.

Shipping and Stevedoring.—Sixty firms in this division increased their working forces

TABLE III—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES

(Number employed by the reporting firms in January, 1920 = 100)

Industry	* Relative weight	Oct. 1, 1925	Sept. 1, 1925	Oct. 1, 1924	Oct. 1, 1923	Oct. 1, 1922	Oct. 1, 1921

* For explanation of the term "relative weight see note on page 4.

from 14,461 persons on September 1 to 15,017 at the beginning of October. There was greater activity in shipping in Quebec, while in Ontario employment declined. Very much larger gains were reported on the same date of 1924, but the index numbers for the two periods were practically the same.

Construction and Maintenance

Building.—For the eighth consecutive month, employment in building construction expanded, 247 persons being added to the staffs of the 314 contractors making returns, who employed 28,451 workers. Firms in Ontario and British Columbia released employees, but elsewhere improvement was indicated. Activity had declined on October 1 last year, when the index number stood at 135.4 as compared with 148.6 on the date under review.

Highway.—Continued curtailment of operations on highway construction and maintenance was registered by the 121 employers reporting. Their staffs fell off by 2,907 persons to 18,476 at the beginning of October. A very large share of this reduction took place in the Maritime Provinces. The number released on October 1, 1924, was much smaller than this, but employment then was in less volume.

Railway.—Statements compiled from 37 companies and divisional superintendents in the railway construction division showed that they employed 40,460 persons as compared with 40,953 in the preceding month. There were moderate declines in all except the Maritime Provinces. Very much more pronounced contractions were made on the same date of

last year, when the index number was slightly lower.

Services

Summer hotels continued to release employees, causing losses in employment that were not counterbalanced by increases in other branches of the service group. In this division, 172 firms reported 14,836 employees, as against 15,512 in the preceding month. The largest decreases were in the Prairie Provinces, but summer hotels everywhere were seasonally slacker. The reductions in payroll indicated at this time last year were somewhat greater, and the index number was over five points below its level in 1925.

Trade

Further improvement was noted in trading establishments, 577 of which increased their working forces from 56,964 on September 1 to 57,458 at the beginning of October. A large share of the expansion took place in wholesale trade in Quebec and the Prairie Provinces. The additions to staffs reported on October 1 of a year ago were somewhat larger, but employment then was in smaller volume.

The accompanying table gives index numbers of employment by industries as at the first of October and September, 1925, as compared with October 1 of the last four years. The columns headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated area of industry bears to the total number of employees reported in Canada by the firms making returns on October 1, 1925.

Increased Mineral Production in Canada

The *Canadian Mining Journal* for October 30 notes that recently issued summary reports on mineral production in Canada all show that substantial increases are being made. "The Department of Mines of British Columbia estimates the value of the Province's mineral production for the first eight months of the year at \$41,000,000. At this rate the total for 1925 will be over twenty per cent higher than that for 1924. The Ontario Department of Mines has just issued a report on the gold output of the Province during the same eight months, which shows a total of \$19,966,279 or at the rate of \$30,000,000 for the year. The nickel and copper production of the Sudbury mines is also large this year and nickel producing companies have had much success in finding new outlets for the metal.

"An outstanding feature this year is the very large production of lead and zinc in British

Columbia. The output for eight months by the lead-zinc mines in the Western Province was 142,000,000 pounds of lead and 75,850,000 pounds of zinc. These figures illustrate what is going on at the Sullivan mine and the Trail smelter of the Consolidated Mining and Smelting Company of Canada. British Columbia can justly claim to have in the Sullivan the greatest lead-zinc mine in the world and at Trail one of the finest metallurgical works. The products of the Trail works are refined metals ready for the manufacturer. Less spectacular are the increases in production of copper by the Granby and Britannia mining companies."

The production of non-metallic minerals will not show a corresponding increase this year, but it is expected that in spite of the recent strike in Nova Scotia, the output of non-metals will probably be equal to that of last year.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING SEPT. 30, 1925, AS REPORTED BY UNIONS MAKING RETURNS

UNEMPLOYMENT as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

months from 1921 to date. The curve which had shown a downward tendency since April continued in this manner until September, when owing to slightly less favourable conditions the trend was in the opposite direction.

In July slightly less activity than in June was reported in Ontario, Saskatchewan and British Columbia, while in the remaining provinces the situation was more favourable. The improvement in Quebec was especially marked owing to greater activity in the garment trades. Lumber workers and loggers

The present article on unemployment among members of local trade unions deals with the situation reported during the quarter ending September 30, 1925. At the close of July the unemployment percentage was 5.2 as compared with 6.1 per cent at the end of June. Improvement continued until the end of August but a less favourable situation was reported for September, the percentage of unemployment standing at 5.7 for the last day of that month. Conditions throughout the quarter were somewhat more favourable each month than during the corresponding months of last year, the percentage out of work at the end of September being only .2 per cent lower than on September 30, 1924.

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters from 1916-1920 inclusive and by

registered considerable unemployment but the mining, manufacturing, building and transportation groups all reflected better conditions.

Unions in all provinces except Nova Scotia and New Brunswick were better employed during August than in the previous month. Alberta showed the most substantial gain due to greater employment in the coal mines and in the remaining provinces the improvement was slight. Workers in the manufacturing, logging, mining, building and transportation divisions were all more fully engaged.

During September employment was on a higher level than in August in all provinces except Quebec and British Columbia, but the declines in these two provinces more than offset the other gains. Quebec reported the most substantial decline due to between season

inactivity in the garment trades. Less employment was afforded in the manufacturing division as a whole and also in the building trades and mining industry, but transportation workers were more active.

Table I on this page summarizes the returns by provinces and Table II on page 1111 shows the percentages of unemployment reported in the different groups of industries.

The lumbering and mining industries reported considerable unemployment during July as compared with the same month of last year. Building tradesmen were more active as were also transportation workers. Employment in the manufacturing industries declined slightly but there were fluctuations within the group. Pulp and paper makers and garment workers were slightly more active, but textile, iron and steel and glass workers were slacker.

In August unions in the manufacturing, logging, mining, building and transportation divisions all registered improvement over the corresponding month of last year. In the manufacturing division paper makers reported considerable gains, while printing tradesmen, garment and iron and steel workers also were better employed. Of the reductions the most substantial were among glass workers followed by lesser declines for textile workers.

Unemployment in the manufacturing division increased during September as compared with the same month of last year. More employment was afforded the majority of the tradesmen in this group, but the large decline in the garment trades was the opposing force for the group, so that at the end of September this year 1.9 per cent more unemployment was registered than in the same month of 1924. Improvement was noted in the building, transportation and mining groups but employment for lumber workers and loggers declined.

Table III which accompanies this article shows the percentage of unemployment for the months of July, August and September for all Canada and also by provinces for the

month of September. For this month reports were received from 1,517 locals with an aggregate membership of 148,161 persons, of whom 8,374 or a percentage of 5.7 were unemployed.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month		N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
July	1921.....	12.2	10.9	8.7	7.8	6.6	4.9	6.3	16.7	9.1

Minimum Wage Rate for Custom Millinery Workers in Ontario

The Ontario Minimum Wage Board held an open session at Toronto in October to hear suggestions as to the proposed minimum rate of wages for millinery workers. The rate was fixed after the Board had held conferences with the employers and workers concerned. Dr. J. W. MacMillan, chairman of the Board, announced that the order would fix the rate of experienced workers at \$12.50 a week. "It will differ somewhat," he said, "from former

orders of the Board in regard to the period of apprenticeship, which will be longer, and apprentices will start at a lower wage. The order affecting millinery workers covers the custom trade, the factories being taken care of under a previous order. There are two seasons in the trade, and we have decided that a period of ten weeks in each season will be deemed as covering the annual apprenticeship which will run for three years. The lowest wage will be \$6 a week."

EMPLOYMENT OFFICE REPORTS FOR SEPTEMBER, 1925

THE volume of business transacted by the offices of the Employment Service of Canada during the month of September, 1925, showed a decrease of 5 per cent in the average daily placements from that of the preceding period, this slight reduction being mainly due to the normal decrease in harvest operations in the West, while a gain of over 33 per cent was registered when compared with the average daily placements effected during the corresponding month a year ago.

The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies in relation to applications, while maintaining a high level, was somewhat lower during the first half of the month, rising slightly, however, during the latter half of the

period, while the curve of placements declined throughout the month. In the former instance the ratio was somewhat lower than that attained during September, 1924, due to the fact that the greatest demand for harvest help was registered during September of that year; the ratio of placements, however, remained slightly higher than that reached during the corresponding month a year ago. The ratio of vacancies to each 100 applications was 96.7 and 98.1 during the first and second half of September, 1925, in contrast with the ratio of 108.6 and 102.4 during the same period in 1924. The ratio of placements to each 100 applications during the period under review was 91.1 and 84.8 as compared with 80.7 and 84.2 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications recorded during the first half of September was 3,909, as compared with 4,101 during the preceding period, and with 2,325 daily during the corresponding period in 1924. Applications for work during the latter half of the month registered 2,349 daily, in contrast with 2,658 during the latter half of September a year ago. Employers notified the Service of a daily average of 3,781 vacancies during the first half and 2,304 during the latter half of the month under review, as compared with the daily average of 2,526 and 2,723 vacancies during the month of September, 1924. Vacancies offered to the Service during the latter half of August, 1925, averaged 4,185 daily. The Service effected an average of 3,563 placements during the first half of September, of which 3,153 were in regular employment and 410 in work of one week's duration or less, as compared with a total average placement during the preceding period of 3,801 daily and with 1,877 daily during the first half of September, 1924. During the latter half of the month under review placements averaged 1,992 daily (1,568 regular and 424 casual) as compared with an average of 2,238 daily during the corresponding period a year ago.

During the month of September, 1925, the offices of the Service referred 70,241 persons to vacancies, and effected a total of 68,637 placements. Of these the placements in regular employment were 58,204, of which 54,248 were of men and 3,956 of women, while the placements in casual work totalled 10,433. Opportunities for employment reported by employers numbered 64,746 for men and 10,566 for women, a total of 75,312. The number of applications for work was 77,436, of which 66,141 were from men and 11,295 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements		Totals
	Regular	Casual	
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (9 months).....	247,130	79,997	327,127

MARITIME PROVINCES

Opportunities for employment listed at employment offices in Nova Scotia and New Brunswick during the month of September, 1925, were slightly less than in August, but were about one per cent more than in September of last year. Gains under both comparisons were reported by Nova Scotia offices and losses by offices in New Brunswick. Placements in Nova Scotia were nearly six per cent less than in August, and declined about five per cent from September of last year. In New Brunswick placements were about two per cent below August, but over one per cent above September, 1924. Industries in which most of the placements were effected were logging, 149; construction and maintenance, 78; services, 160; and manufacturing, 52 in Nova Scotia, and services, 481 in New Brunswick. During the month of September 275 men and 56 women were placed in regular employment by Nova Scotia offices and 122 men and 76 women by offices in New Brunswick.

QUEBEC

Orders received during the month of September were about two per cent less than in August, but nearly 60 per cent greater than during the corresponding month last year. Increased activity in the manufacturing industries, bush operations and construction and maintenance being mainly responsible for the gains over September, 1924. Placements were about 19 per cent higher than in August, and nearly 55 per cent higher than in September of last year. The increase in the former comparison was largely due to the opening up of bush work, and in the latter comparison all industries except mining and transportation showed gains, those in the manufacturing industries, logging and construction and maintenance being the most pronounced. Industries in which work was secured for most workers were manufacturing, 214; logging, 913; construction and maintenance, 549; and services, 722. Placements in regular employment numbered 1,894 of men and 618 of women.

ONTARIO

The number of vacancies listed during September were about 23 per cent higher than in

August and also in September last year. Gains over August were most pronounced in the manufacturing industries, logging, farming and transportation. The most noteworthy gains over September 1925 were in manufacturing industries, farming, construction and maintenance and transportation. Placements were nearly 23 per cent higher than in August and about 28 per cent higher than during September of last year. Industrial divisions in

were about 13 per cent less than in August and about 8 per cent less than in September, 1924. Industrial divisions in which most of the placements were effected were manufacturing, 270; logging, 501; representing transfers to camps in northern Ontario; farming, 4,105; construction and maintenance, 513; services, 1,928; and trade, 298. Placements in regular employment during the month under review numbered 4,857 of men and 573 of women.

which most of the placements were effected during the month were manufacturing, 1,977; logging, 1,119; farming, 1,785; mining, 110; transportation, 650; construction and maintenance, 3,704; services, 3,891 and trade, 372. During the month under review 8,479 men and 1,191 women were placed in regular employment by Ontario offices.

MANITOBA

Orders listed during the month of September were nearly 29 per cent less than in August and six per cent less than during September last year. The decrease in the former comparison was almost entirely due to the falling off of farm orders, where the demand for harvesters was at its peak in August, or one month earlier this year than last. Farm orders, for the same reason, were also fewer than in September of last year. The falling off in farm orders was, however, counterbalanced in part by increased requests for workers in the manufacturing industries, construction and maintenance, services and trade. Placements

SASKATCHEWAN

Offices in Saskatchewan as in August again reported a very heavy demand for farm workers, orders received during September for all classes of work being only about five per cent less than in the preceding month and about ten per cent higher than in the corresponding month of last year. Placements were nearly nine per cent higher than in August and about 67 per cent in excess of September, 1924. The bulk of the placements throughout the Province were in farming, employment being secured for 26,371 workers in this industry. Placements in industries other than farming included manufacturing, 127; construction and maintenance, 482; and services, 861. During the month 27,033 men and 329 women were placed in employment of more than one week's duration.

ALBERTA

There was a decline of about 28 per cent in the number of orders received during September when compared with August, but a gain of

more than 15 per cent was reported over September of last year. The demand for harvest workers was again heavy but had fallen considerably from August. Placements during September were about 26 per cent less than during the preceding month, but more than 12 per cent higher than in the corresponding month of last year. Industrial divisions in which most of the placements were effected during the month were manufacturing, 291; farming, 7,271; mining, 340; construction and maintenance, 864; services, 825; and trade, 158. Placements in employment of more than one week's duration numbered 8,848 of men and 406 of women.

BRITISH COLUMBIA

Orders listed at offices in British Columbia during the month of September were about five per cent less than in August, but over 52 per cent higher than in September, 1924. All industrial divisions participated in the gain over September last year except logging, the increases in the manufacturing industries, transportation, and construction and maintenance being the most pronounced. Placements were about 59 per cent fewer than in August, but nearly 39 per cent in excess of September, 1924. Industries in which most of the placements were effected included manufacturing, 902; logging, 369; farming, 759; of which the majority were transfers to Saskatchewan and Alberta; manufacturing, 135; transportation, 481; construction and maintenance, 1,142; services, 1,360; and trade, 185. There were 2,740 men and 707 women placed in regular employment during the month.

Movement of Labour

During September, 1925, the offices of the Employment Service of Canada made 58,204 placements in regular employment, of which 49,156 were of persons for whom the employment found was outside the immediate locality at which they were registered. Of the latter, 4,552 were granted the Employment Service reduced transportation rate, 2,872 going to points within the same province as the despatching office and 1,680 to other provinces.

Quebec offices issued 286 certificates, 221 of which were given to bushmen going from Hull and Montreal to points in the vicinity of Sault St. Marie, North Bay and Cobalt. In addition, Quebec transferred 53 bushmen and one cook, and Montreal seven sawmill labourers and four bushmen to points within their respective zones. Ontario certificates numbered 690, of which 675 were provincial and 15 interprovincial. Of the former, 440 were to bushmen and 223 to construction and railroad labourers all going to Northern Ontario districts, the remainder including six

carpenters, one clerk, one blacksmith, one farm labourer, two bricklayers, and one cook travelling to various points throughout the province. (The interprovincial transfers included eight harvesters going to Manitoba and two to Saskatchewan from the Fort William office and one bushman and four linemen to Hull from Ottawa). In Manitoba 1,861 special rate certificates were granted, of which 612 went to persons travelling within the province and the remainder to outside points. The Winnipeg office issued all the certificates, those for points within the province being for 589 harvesters, 12 farm domestics, and 11 female hotel workers. To Alberta were sent 27 harvest workers, to Saskatchewan 920 harvest workers, four farm domestics, and two female hotel workers, and to Ontario 294 bush workers and two waitresses. The Saskatchewan offices issued 752 special transportation certificates, 707 within the province and 45 to other provinces. The provincial transfers included 595 farm workers, 57 bushmen, 20 miners, 20 teamsters, 12 farm domestics, one painter, one baker, and one blacksmith, the majority going to Saskatoon, Prince Albert and Estevan zones. Of the interprovincial transfers 25 were for harvesters going to Alberta and two to Manitoba, seven for farm housekeepers, six for carpenters and four for miners going to the Calgary, Edmonton and Drumheller zones. In addition, one bushman was sent from Regina to Cranbrook. Workers benefiting by the reduced rate in Alberta numbered 810, of whom 105 were harvesters going to Saskatchewan and nine labourers to Revelstoke. Of the 696 provincial transfers, 463 were for harvest workers despatched by the Calgary, Medicine Hat and Edmonton offices. Calgary also issued 152 certificates, chiefly to teamsters, bushmen, and labourers, and Edmonton 81 certificates, the majority of which were for teamsters, miners, sawmill and general labourers. British Columbia offices granted 153 special rate certificates, 117 of which were for points within the same province as the despatching office. Of these 56 were for fruit pickers and cannery workers going to the Okanagan Valley, 24 for miners, eight for bushmen, nine for cooks and practically all the remainder went for construction labourers for the Prince Rupert, Vancouver, Penticton and Kamloops zones. There was a large falling off in the interprovincial transfers, only 36 certificates being issued for the Prairie Provinces as against over 9,000 in August. Thirty-three of these were for farm labourers, 19 travelling to Alberta and 14 to Saskatchewan, and the rest were for cooks going to Saskatoon and North Battleford.

Of the 4,552 workers who benefited by the Employment Service reduced transportation rate 2,074 were carried by the Canadian Na-

tional Railway, 2,448 by the Canadian Pacific Railway, 11 by the Pacific Great Eastern Rail-

way, and 19 by the Timiskaming and Northern Ontario Railway.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JULY TO SEPTEMBER, 1925

EMPLOYMENT conditions as indicated by the work of the offices of the Employment Service of Canada during the quarter July to September, 1925, were much

more favourable than during the corresponding quarter of last year. Decided gains were recorded in opportunities for employment and placements effected, there being an increase

of about 48 per cent in orders listed and over 58 per cent more positions secured. All industrial divisions except logging participated in the gains, those in the manufacturing industries, farming, mining and building construction being the most pronounced. Increased opportunities for employment over

the corresponding quarter of last year were reported from all provinces except Nova Scotia and New Brunswick, the reduction in the latter province being nominal only. The accompanying table gives the vacancies and placements of the offices of the Employment Service of Canada by industrial groups in

the various provinces during the period July to September, 1925.

The chart on page 1117, which accompanies the article on the work of the employment offices for the month of September, shows the trend of the curves representing the ratio of vacancies and placements to applications. It will be noticed that the curve of vacancies was at a higher level during July and August than during the corresponding months of last year, but that during September it was not quite so high as in September, 1924. This was not due to any falling off in orders, of which more were received this year than last, but owing to the fact that more applications for employment were received. Placements were at a higher level in relation to applications each month during the quarter under review than during the corresponding months of 1924. During the period July to September of last year there were on an average 89 vacancies and 77 placements for each 100 applications for employment as compared with 94 vacancies and 86 placements for each 100 applications during the period under review. The average number of applications registered daily during July to September of this year were 2,607 and the daily averages of positions offered were 2,451 in contrast with daily averages of 1,859 applica-

tions and 1,657 vacancies during the corresponding quarter of 1924.

During the three months July to September, 1925, the offices of the Service reported that they had made 177,454 references to positions and had effected a total of 173,312 placements, of which 146,913 were in regular employment and 26,399 in casual work. Of the placements in regular employment 135,365 were of men and 11,548 of women, while casual work was found for 14,864 men and 11,535 women. A comparison with the same period of 1924 shows that 109,480 placements were made, of which 88,621 were in regular employment and 20,859 in casual work. Applications for employment during the period under review were received from 169,287 men and 31,428 women, a total of 200,715, in contrast with the registration of 143,127 applicants during the same period of 1924. Employers notified the Service during the third quarter of the current year of 188,700 positions, of which 160,332 were for men and 28,368 for women, as compared with 127,600 opportunities for work offered during the same period of 1924.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of September.

BUILDING PERMITS ISSUED IN SEPTEMBER, 1925

THE building authorized by 60 cities during September was valued at \$9,927,968; this was an increase of 7.2 per cent as compared with the August aggregate of \$9,258,752, but a decline of 33.3 per cent as compared with the total of \$14,883,323 for September last year. The value of the permits issued by the 60 cities during September, 1924, however, was higher than in the same month of any year since 1920, while for the 35 cities for which these statistics were originally compiled, it was the highest since 1913. It was also the largest aggregate registered in any one month of 1924, but it has twice been exceeded this year, the 1925 April and May totals for the 60 cities each being over \$15,000,000.

Some 50 cities furnished detailed statements, showing that they had granted permits for the erection of approximately 1,400 dwellings estimated to cost over \$5,800,000, and of more than 2,700 other buildings valued at nearly \$3,600,000. In August, permits were granted for over 1,100 residences at a proposed cost of approximately \$4,800,000 and about 2,500 other buildings valued at more than \$3,900,000.

New Brunswick, Quebec, Manitoba, Saskatchewan, Alberta and British Columbia re-

ported increases in the value of the building permits issued as compared with the preceding month. The gain of \$111,815, or 699.3 per cent in New Brunswick was proportionally highest, but was exceeded by the absolute increase of \$442,589 or 18.6 per cent in Quebec. In Nova Scotia and Ontario there were declines of 61.3 per cent and 7.9 per cent respectively.

As compared with September, 1924, New Brunswick, Manitoba, Alberta and British Columbia showed increases in the value of proposed building. Manitoba recorded the greatest actual gain of \$240,259, or 78.2 per cent, while Alberta registered the largest proportional increase of \$207,040, or 113.0 per cent. Of the decreases in the remaining provinces, that of \$4,496,439, or 61.5 per cent in Quebec was most pronounced.

Montreal and Vancouver recorded increases in the value of the building permits issued as compared with August, 1925, but reductions in comparison with September, 1924. In Toronto, the total was lower than in either the preceding month or the corresponding month of last year, while Winnipeg reported

advances in both comparisons. New Glasgow, Moncton, St. John, Sherbrooke, Three Rivers, Belleville, Kingston, Kitchener, Port Arthur, Ford, Riverside, St. Boniface, Regina, Calgary, Edmonton, Lethbridge, Point Grey, Prince Rupert, South Vancouver and Victoria also issued permits at a higher valuation than in either August, 1925, or September, 1924.

Cumulative record for first nine months, 1925.—The aggregate value of the building permits issued by 60 cities during the first nine months of this year was \$96,491,160, as compared with \$95,533,115 in 1924, \$108,026,938 in 1923, \$116,567,251 in 1922, \$88,172,673 in 1921, and \$95,962,951 in 1920. There were, there-

fore, increases of 1.0 per cent, 9.4 per cent, and 0.6 per cent as compared with 1924, 1921, and 1920, respectively, but the total was lower by 10.7 per cent and 17.2 per cent than in 1923 and 1922, respectively. The Bureau's weighted index number of wholesale prices of building materials averaged 154.0, as compared with 161.5, 166.8, 161.9, 189.3 and 215.1 for the same nine months of 1924, 1923, 1922, 1921 and 1920, respectively.

The accompanying table gives the value of the building permits issued in 60 cities during August and September, 1925, and September, 1924. The 35 cities for which records are available since 1910 are marked with asterisks.

Adolescent Instruction at Toronto

There are now 312 employers and employing firms in Toronto who have undertaken to comply with the Adolescent School Attendance Act and to send boys or girls between the ages of 14 and 16 in their employ, to the special classes provided for them, two afternoons a week. Part time classes are now operated in the General Technical, the River-

dale Technical, the east end commercial schools and the High School of Commerce. Over 600 applications for working permits had been received in September. Adolescents who have received permits must attend school two half days and one full day a week to fulfil the requirements of the Act. They receive instruction suited to their individual needs in view of the work in which they are employed.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have been recently received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes are given, with other information of general interest.

Construction: Buildings and Structures

VANCOUVER, B.C.—CUT STONE CONTRACTORS, AND JOURNEYMEN STONECUTTERS' ASSOCIATION

Agreement to be in effect from August 1, 1925, until August 1, 1926, with three months' notice of change.

The Union is to control cutting of Haddington Island and all other sandstone.

Wages on planers, lathes and carborundum saws, \$3.60 per 8-hour day.

Wages of stonecutters, \$3 per 8-hour day.

Men sent out to a job, 50 cents extra per day.

Five days' work per week. No work on Saturday and Sunday.

Service: Public and Municipal

CITY OF BRANDON—SCHEDULE OF WAGES AND CONDITIONS OF EMPLOYMENT.

To be effective from March 1, 1925, until March 1, 1926. (See also under "Transportation and Public Utilities.")

Waterworks, Pumping Station.—Wages, Firemen, \$96.26 per month; per hour—machinists, 43½ cents; boiler washers, 37.1 cents; labourers, 35 cents; gas engine operators, 3 cents per hour additional to regular rate.

Hours per day, 10; six days per week. Firemen shall work in eight-hour shifts.

Overtime, time and one-half. All time over a full week's work to be counted overtime, except as hereinafter provided.

Steady labourers to take Sunday duty only when necessary, and at regular rate.

Holidays—one week's holiday and all statutory holidays with pay after one year's continuous service.

Engineers to be governed by the Engineers' Union.

Health Department.—Wages, Foreman and horse keeper, \$98 per month with cottage, water and light. Per hour—teamsters, 35 cents; labourers, 35 cents; night soil men, 37.2 cents.

Conditions.—Hours per day, between November 16 and February 29, nine; between March 1 and November 15, ten. One half hour extra for stable duty at regular rate. One hour off each Saturday with pay.

Men on Sunday stable duty will be allowed five hours for same at regular rate of wages. Holiday work, regular rate.

Holidays: one week's holidays and all statutory holidays with pay after one year's service.

Works and Sewer and Water Distribution Departments:

Wages, per hour—first assistant foreman, 52½ cents; second assistant foreman, 46 cents; special labourers, 41.6 cents; labourers, 35 cents; cement finishers, 46 cents; cement foreman, 52½ cents; works teamster, 37.2 cents; weighmaster, \$37.50 per month.

Hours per day—between November 16 and February 29, nine; between March 1 and November 15, ten; six days a week. One hour off each Saturday with pay. Time and one-half for overtime and Sunday work.

Cribbers, pipe layers and scantling men to be special labourers.

Holidays: one week and all statutory holidays with pay after one year's service.

General conditions for civic employees.

After notice in writing of grievances, the City Manager shall receive a grievance committee from the Civic Employees' Union, and give due consideration to the matter complained of.

No discrimination by reason of being a member of a trade union.

Copies of resolutions and regulations affecting this statement will be sent to the secretary of the Civic Employees' Union.

Seniority in filling vacancies, subject to qualification, is recognized, such being determined by the City Manager.

Order of precedence in employment and promotion, other conditions being equal—resident married men (a) with families, (b) without families; resident single men. Returned men to be given preference where permissible.

Hours per day, eight forty-four per week.

Overtime in car barns and power house, time and one-half for first four hours and double time thereafter. Overtime work to be taken in rotation. Emergency calls to be paid not less than four hours straight time.

International Union of Steam and Operating Engineers No. 857.—

Wages—Pumping Station—per hour, mechanic's helpers, 60 cents; firemen, 56 and 59 cents; ash wheeler, 50 cents and 54 cents; general help, 50 cents and 54 cents.

Shift men to work six-day week. Time and one-half for work on seventh day. Holidays, time and one-half.

United Brotherhood of Carpenters and Joiners.—

Wages per hour, carpenters at power house and Street Railway Barns, 76 cents. Foremen, 5 cents extra per hour.

Hours, eight per day; forty-four per week.

Overtime, time and one-half.

In double shift, no man shall work more than eight hours in twenty-four at straight time.

Sundays and holidays, double time.

(See also under "Transportation and Public Utilities.")

Transportation and Public Utilities: Electricity and Gas

MONTREAL, QUEBEC.—MONTREAL LIGHT, HEAT AND POWER CONSOLIDATED, AND EMPLOYEES, MEMBERS OF CANADIAN ELECTRICAL UNION OF LINEMEN AND HELPERS, LOCAL No. 1.

Agreement to be in effect from June 1, 1925, to May 31, 1926.

Line Department.—Hours per day, eight; from 8 a.m. to 12 noon and from 1 p.m. to 5 p.m.; forty-eight per week.

A man called from home to work after regular working hours will receive not less than five hours' pay. Overtime rates, time and one-half; Sundays and holidays, double time.

Wages per hour—linemen, 1st class, 54½ cents; 2nd class, 49½ cents; groundmen, truck drivers, 46½ cents; labourers, 35 cents. Cable department: combination cable splicer and linemen, 60½ cents; cable splicers, 57 cents; cable splicers' helpers, 49½ cents; truck driver, 46½ cents; labourers, 35 cents.

One week's holidays with pay to monthly employees of six months service instead of overtime, with privilege of leaving Friday night or as mutually arranged.

Should a general reduction of the working force be necessary, seniority and efficiency will regulate the order in which the men are laid off.

Grievances may be presented to the proper officer of the Company. If men notify foreman of desire for representation by a committee, an officer of the Company will during working hours meet such committee to adjust the grievance. The agreement applies only to employees engaged on permanent operations.

VANCOUVER, B.C.—THE BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY LIMITED, THE VANCOUVER POWER COMPANY, LIMITED, THE VANCOUVER ISLAND POWER COMPANY, LIMITED, AND THE WESTERN POWER COMPANY OF CANADA, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS.

Agreement in effect from July 1, 1925, until June 30, 1926, and thereafter, subject to 30 days' notice in writing from either party, whereupon the agreement may be amended, cancelled or substituted.

Only members in good standing of the union shall work for the employers or for contractors and sub-contractors except in rural districts where prospective customers may set poles to meet the companies' lines.

Representatives of the organization shall be granted a pass through shops and stations and a transportation pass.

The representative of the union, with a committee (if a committee be appointed) will be given an early hearing by the management when an interview is necessary.

Employees may have gas concessions and may purchase electric light at 4 cents per kilowatt hour.

All employees shall be granted transportation over lines in the city or interurban district in which they are employed. Each employee shall be granted one round trip pass per week for self and members of family, as well as four round trip passes per year over Saanich line. Any employee residing on the interurban lines may purchase settlers' tickets not exceeding thirty per month, at half rate for his wife and family, unless this provision is contrary to law, provided minimum rate for such tickets shall be six cents. Any employee making wrong use of the concession shall be dismissed.

Linemen and Wiremen.—Any employee having charge of more than three journeymen, apprentices or groundmen, or more than twelve labourers shall be classed as a foreman. An employee in charge of three or less journeymen, apprentices or groundmen or twelve or less labourers shall be classed as a sub-foreman. An employee having three or more years' experience shall be a journeyman. Apprentices shall serve three years, ratio not to exceed one to four journeymen in each department. An employee assisting a journeyman in various classes of work shall be classed as a groundman.

Hours per day, eight, from 8 a.m. to 12 noon, and 1 p.m. to 5 p.m. On request shift hours may be changed for not less than one month upon approval of the electrical engineer. Overtime rates, double time. Sundays, Saturday afternoons and holidays, double time. Employees may have time off to vote on election day with pay.

Employees working away from home on a temporary job will be allowed expenses of board and lodging. More than 14 days' work will be considered a permanent job and no allowance will be made.

Expenses of board and lodging will be allowed all lead cable splicers when sent away from home town.

Troublemakers, helpers and drivers on trolley and electric light work, working shift work, straight time for any eight consecutive hours out of twenty-four for trouble only. Regular men to work shifts in turn of not longer than two weeks' duration and must take one day off in seven. Troublemakers, helpers and drivers assigned to shift work on regular day must take one day off in seven. No man is to be assigned to shift work for less than thirty days.

Station Operating Staff.—Operators to be journeymen must have had three years' experience in electrical work during which period they shall be apprentices; not more than one apprentice to four journeymen.

Monthly days off may not be taken whilst on night shift.

In all branches where three shifts are worked, these shall be worked by the revolving watch, two weeks being being the maximum period of shift. In stations working two shifts men to take same in turn.

Eight consecutive hours' work per day.

In sickness, time will be allowed with pay at the discretion of the Chief Operating Engineer.

In event of overtime work once and a half the time worked will be allowed off.

Four days' monthly vacation and fourteen days' annual vacation with pay. For men having worked less than one year, one day's holiday for each month of service.

Metermen.—Hours, eight per day; from 8 a.m. to 12 noon and from 1 p.m. to 5 p.m.

In sickness a reasonable amount of time will be allowed off with pay at the discretion of the Superintendent, also pay for public holidays. In overtime work once and a half the time worked will be allowed off.

Metermen shall be allowed two weeks' annual vacation with pay. If employed less than one year, one day's holiday per month.

Arc Trimmers.—Hours on patrol work, eight consecutive hours out of the twenty-four. Forty-eight per week.

In sickness a reasonable amount of time will be allowed off with pay at the discretion of the Superintendent.

One day off per week with pay.

In event of overtime work once and a half the time worked will be allowed off.

One week's holiday a year with pay.

Wages per day.—Line department and wiremen: lead covered cable foreman, \$9.25; journeyman cable splicer, \$8.50; foreman lineman, \$9; sub-foreman lineman, \$8.25; journeyman lineman, \$7.50; foreman wireman,

\$9; journeyman wireman, armature winder, transformer winder, \$7.50; auto driver, \$5.50; troubleman, repairman, track bonder, \$7.50, groundman, \$5.50.

Apprentice lineman and wireman: beginners, \$4; after 6 months, \$4.30; after 12 months, \$4.70; after 18 months, \$5.20; after 24 months, \$5.80; after 36 months, \$7.50.

Apprentice cable splicer: beginners, \$7; after 12 months, \$7.20; after 24 months, \$7.50; after 36 months, \$8.50.

Station operating staff: per month—operator, \$180, \$167, \$159; apprentice operator, first year, \$126; second year, \$130; third year, \$140. Floor men and helpers, \$126; load dispatchers, \$210.

Meter department: per month, metermen, \$147; chief meter testers, \$157.

Apprentice metermen: per month, first year, \$114; second year, \$126; third year, \$132; meter foreman, \$180; arc trimmers, \$141.

Transportation and Public Utilities: Street and Electric Railways

Holidays, time and one-half. Hours per day, eight. Overtime, time and one-half.

Night men, overtime rates for the seventh consecutive night, and for all work on holidays.

Barn men shall be furnished with clothing for emergency work.

Trackmen, Track Greasers and Flag Men: Wages per hour—labourers, 50 cents; trackmen, 50 and 52 cents; in charge of gang, 54 cents; track greasers, 52 cents.

Straight time on holidays.

Hours, eight per day. Over eight hours, time and one-half. One day off in seven. Forty-eight hours per week during nine months; forty-four during remainder of year.

Any street railway employees incapable of holding present position through old age or accident shall have preference of a flagman's position when a vacancy occurs.

Power House and Pumping Station: Wages, per hour—fireman, 56 and 59 cents; head ash hand, 56 cents; other ash handlers, 50 and 54 cents; elevator attendants, 59 cents; elevator attendants' helpers, 57 cents; crane engineers' helpers, 56 cents; other coal handlers and general help, 50 and 54 cents; boiler cleaners, 56 and 60 cents; tube blowers, 56 cents. Pumping Station: chief filter operators, \$130 per month; general help on filters, 50 and 54 cents.

Shift men, six days per week, time and one-half for work on seventh day, and on holidays. Coal handlers, five and one-half days per week; Sundays and holidays, double time.

For all crafts, time and one-half for Saturday afternoon until 4 o'clock; thereafter, double time.

(For general conditions affecting all civic employees see under "Service: Public and Municipal.")

Transportation and Public Utilities: Water Transportation

MONTREAL, QUEBEC.—CERTAIN STEAMSHIP LINES AND THE SHIPLINERS' ASSOCIATION OF THE PORT OF MONTREAL, LOCAL No. 2098.

Agreement to be in effect from April 4, 1925 to December 31, 1925.

Each party to the agreement agrees to deposit \$500 with an incorporated Trust Company as a guarantee.

Working hours, 7 a.m. until noon and 1 p.m. until 6 p.m. Wages per hour, day work, 62 cents; 7 p.m. until 11 p.m. and midnight to 5 a.m., night work, 72 cents.

Sundays, Victoria Day and Dominion Day, double time.

For work during meal hour, double time.

Shipliners ordered out to work at night must be ordered out for 7 p.m. and be paid full time at prevailing rate. If ordered out to work at 7 p.m. and their services not required, they shall be paid a minimum of one hour.

Running of grain in the pipes to be stopped while men go down in the hold. Two men to stand on deck if necessary.

Night meals are to be taken between 11 p.m. and midnight; the ship to supply good meals or pay the cost thereof.

The union agrees to supply the necessary men to perform the work of shipliners.

The deposits are to be applied by the Trustees in payment in order of priority of time of judgments or orders of any court in the Province of Quebec in favour of the other party. On expiration of the agreement each deposit or balance of deposit will be returned to the party. The Companies agree to make up difference so shipliners will get a return of not less than 6 per cent of any money deposited in trust.

Transportation and Public Utilities: Local Transportation

EDMONTON, ALBERTA.—THE DAWSON COAL COMPANY AND INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL No. 514.

Agreement to be in effect from September 21, 1925, until August 31, 1926, and from year to year thereafter or until a new agreement is negotiated.

The representatives of the Company will discuss

with representatives of the Union during August of any year proposed changes in the agreement.

Minimum wages for hauling coal blocks, and loading on cars in a specified district, 75 cents per ton; outside of said district and to any private houses, \$1 per ton.

No teamster or man with team shall be employed unless a union member. Union members will be given preference in employment when additional men are required. If the union is unable to supply men and teams the Company may secure the same elsewhere. Employees must join the Union within one week of employment.

EDMONTON, ALBERTA.—THE PREMIER COAL COMPANY, LIMITED, AND INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL 514.

Agreement to be in effect from August 31, 1925, until August 31, 1926, and thereafter from year to year or until a new agreement is negotiated.

The representative of the Company will discuss with representatives of the Union during August of any year proposed changes in the agreement.

Minimum scale of wages for hauling coal from the mine—blocks and loading on cars: in a specified district, 75 cents per ton; outside of district, same as private houses.

Private houses: 75 cents, 90 cents and \$1.15 per ton according to district.

No teamster or man with team shall be employed unless a union member. Union members will be given preference in employment when additional men are required. If the union is unable to supply men and teams the Company may secure the same elsewhere. Employees must join the union within one week of employment.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING October the Department received information regarding thirty-six contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by order in council for the protection of the labour to be employed. In thirty-one of these contracts the general fair wage clause is inserted, requiring, in regard to all classes of labour, adherence to the current wages rates and hours of the district in which the work is to be performed. The five remaining contracts further contained schedules of rates and hours based on the current standards of the district in these respects. The standard labour conditions sanctioned by the order in council, which appear in the thirty-six contracts already referred to, are stated in the terms following:—

LABOUR CONDITIONS

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable

rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed

and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main

Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Alterations and additions to the Public Building at Kitchener, Ontario. Names of contractors, W. H. Dunker and A. E. Dunker, "Dunker Brothers," of Kitchener, Ontario. Date of contract, October 13, 1925. Amount of contract, \$42,925. A fair wage schedule is inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours per day	Hours per week
Bricklayers.....	\$ cts.		
Masons.....	1 00 per hour	9	50

Construction of a wharf and approach at Honey Harbour, Ontario. Name of contractor,

G. W. Rayner, Toronto, Ontario. Date of contract, October 23, 1925. Amount of contract, approximate expenditure, \$10,346.80.

Repairs to wharf at Shediac, N.B. Name of contractor, F. L. Boone, South Devon, N.B. Date of contract, September 23, 1925. Amount of contract, unit prices; approximate expenditure, \$16,966.80.

Reconstruction of public wharf at Cumberland, Ontario. Name of contractors, Grant Brothers Construction Company, Limited, Ottawa, Ontario. Date of contract, August 8, 1925. Amount of contract, unit prices; approximate expenditure, \$7,958.52.

Repairs to revetment wall at Chatham (McGregor Creek), Ontario. Name of contractor, R. Keemle, Chatham, Ontario. Date of contract, September 17, 1925. Amount of contract, unit prices; approximate expenditure, \$6,555.

Reconstruction of wharf in concrete at Caughnawaga, P.Q. Name of contractor, H. Gravel, St. Lambert, P.Q. Date of Contract, October 21, 1925. Amount of contract, unit prices; approximate expenditure, \$5,604.70.

Reconstruction of the public wharf at Desjardins, P.Q. Names of contractors, "Farley & Grant," A. E. Farley of Ottawa, Ontario, and Percy R. Grant, Hazeldean, Ontario. Date of contract, September 21, 1925. Amount of contract, unit prices; approximate expenditure, \$10,926.40.

Wharf replacement at Great Village, Colchester County, N.S. Name of contractors, Standard Construction Company, Limited, Halifax, N.S. Date of contract, September 26, 1925. Amount of contract, unit prices; approximate expenditure, \$3,985.97.

Construction of an extension to the breakwater at Freeport, N.S. Names of contractors, Eddie Gaudet and S. F. Comeau, of Comeauville, N.S. Date of contract, October 2, 1925. Amount of contract, unit prices; approximate expenditure, \$9,698.50.

Construction of a breakwater at Lower Sandy Point, N.S. Name of contractor, H. A. Russell Construction Company, Limited, Halifax, N.S. Date of contract, October 13, 1925. Amount of contract, unit prices; approximate expenditure, \$9,986.58.

Erection and completion of a public building at Maniwaki, P.Q. Name of contractor, Adolphe Nault, Rivière Desert, P.Q. Date of contract, October 13, 1925. Amount of contract, \$17,250, the following prices to apply for any change which may be made in connection with this contract; price per foot for well beyond 30 feet in depth, \$3. Price per cubic yard for excavation, \$1. Price per cubic yard for concrete, \$15.

Addition to Post Office, public building, Rimouski, P.Q. Name of contractor, Zenon Ouellet, Rimouski, P.Q. Date of contract, October 13, 1925. Amount of contract, \$8,750 and at the following prices for additional work which may be required: 1. Price per cubic yard for excavation as specified, 80 cents. 2. Price per cubic yard for concrete as specified, \$12.25.

Alterations to heating apparatus in the Customs-Excise Building at Prescott, Ontario. Name of contractors, McKelvey & Birch, Limited, Kingston, Ontario. Date of contract, September 15, 1925. Amount of contract, \$1,190.

Supply and installation of a new hot water boiler in the Public Building at St. Hyacinthe, P.Q. Name of contractor, H. Letourneau, St. Hyacinthe, P.Q. Date of contract, September 19, 1925. Amount of contract, \$1,158.

Alterations to heating apparatus in the public building at Chicoutimi, P.Q. Name of contractor, Leonard Claveau, Chicoutimi, P.Q. Date of contract, September 19, 1925. Amount of contract, \$1,689.

Supply and installation of new hot water boilers in the public building at Essex, Ontario. Name of contractor, M. A. Brian, Windsor, Ontario. Date of contract, September 10, 1925. Amount of contract, \$1,750.

Grading, paving, roads, etc., in connection with the new dormitory building, Royal Military College, Kingston, Ontario. Name of contractor, Peter McCoy, Kingston, Ontario. Date of contract, October 7, 1925. Amount of contract, \$6,926.45.

Reconstruction of part of the western breakwater at Collingwood, Ontario. Name of contractors, Farley & Grant, A. E. Farley of Ottawa, Ontario, P. R. Grant, Hazeldean, Ontario. Date of contract, October 1, 1925. Amount of contract, unit prices; approximate expenditure, \$31,141.

Erection of a boiler shed and heating equipment at the Booth Street Experimental Station, Ottawa, Ontario. Name of contractor, Alex. I. Garvock, Ottawa, Ontario. Date of contract, October 7, 1925. Amount of contract, \$7,800.

Construction of a breakwater-wharf at Finlay Point, N.B. Names of contractors, Duncan McEachern, Mabou Mines, N.S., and Angus A. McDonald, West Mabou, N.S. Date of contract, October 14, 1925. Amount of contract, unit prices; approximate expenditure, \$11,956.

Construction of a new roof on the drill hall at Picton, Ontario. Name of contractors, Jamieson Bone & Company, Limited, Belleville, Ontario. Date of contract, October 13, 1925. Amount of contract, \$4,080.

Construction of an extension to the breakwater at Hall's Harbour, N.S. Name of contractor, Halle B. Bigelow, Canning, N.S. Date of contract, October 8, 1925. Amount of contract, unit prices; approximate expenditure, \$8,934.75.

Supply and installation of a new steam heating system for the old Post Office building at St. John, N.B. Name of contractor, Richard E. Fitzgerald, St. John, N.B. Date of contract, October 12, 1925. Amount of contract, \$5,820.

Extension and repairs to the wharf at Bagotville, P.Q. Names of contractors, Elzear Methot, Montmagny, P.Q., Napoleon Fournier, Cap St. Ignace, P.Q., "Methot & Fournier." Date of contract, October 13, 1925. Amount of contract, unit prices; approximate expenditure, \$13,883.50.

Alterations and additions to Unit "H", Westminster Military Hospital, London, Ontario. Name of contractor, W. E. Dodd, London, Ontario. Date of contract, October 16, 1925. Amount of contract, \$4,620.

Construction of a cottage at the Partridge Island Quarantine Station, St. John, N.B. Names of contractors, "Kane & Parker," James Edward Kane and John Stewart Parker, St. John, N.B. Date of contract, October, 1925. Amount of contract, \$4,650.

Construction of a breakwater-wharf at Little Judique Ponds, Inverness County, N.S. Names of contractors, John J. McDonald, Dan. A. McDonald, Constantine J. McDonald and Alexander D. McDonald, of Little Judique Ponds, N.S. Date of contract, September 28, 1925. Amount of contract, unit prices; approximate expenditure, \$9,510.

Dredging the Victoria Harbour, B.C., in the vicinity of Lemon and Gonnason's Company wharf, Walker & Son's wharf and Cameron Lumber Company's wharf. Name of contractors, The Pacific Construction Company, Limited, Vancouver, B.C. Date of contract, October 9, 1925. Amount of contract, Class "B" \$0.32 per cubic yard for deepening in the vicinity of Lemon & Gonnason's Company wharf; \$0.35 per cubic yard for deepening at Walker & Son's wharf, and \$0.38 per cubic yard for deepening in the vicinity of Cameron Lumber Company's wharf.

Dredging channel from Station 4300 to 5550 and Station 18600 to 25600, River du Loup (en haut) P.Q. Name of contractors, The National Dock and Dredging Corporations, Limited, Quebec, P.Q. Date of contract, September 21, 1925. Amount of contract, Class "A" \$4 per cubic yard, scow measurement. Class "B" \$0.35 per cubic yard, scow measurement.

Dredging slip at Government wharf, Sault Ste. Marie, Ontario. Name of contractors, The Soo Dredging & Construction Company Limited, Sault Ste. Marie, Ontario. Date of contract, September 28, 1925. Amount of contract, Class "A" \$5.80 per cubic yard, place measurement; Class "B", \$1.42 per cubic yard, place measurement.

DEPARTMENT OF RAILWAYS AND CANALS

Construction of section No. 6 of the Welland Ship Canal. Name of contractors, the Atlas Construction Company, Limited, of Montreal, and E. O. Leahey and Company, Limited, of Ottawa. Date of contract, October 12, 1925. Amount of contract, schedule rates, approximately \$7,185,120 estimated from estimated quantities.

Construction of Young's Point section of the Trent Canal at Young's Point, about 5½ miles from Lakefield, Ontario. Name of contractors, T. A. Brown Company, Limited, Toronto.

Ontario. Date of contract, October 23, 1925. Amount of contract, schedule rates, approximately \$120,311.50, estimated from estimated quantities.

POST OFFICE DEPARTMENT

The following is a statement of payments made in October, 1925, for supplies ordered by the Post Office Department, and subject to the provisions of the Fair Wage clause:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	\$ 618 20
Making and repairing rubber stamps, daters, etc.....	211 55
Making up and supplying letter carriers' uniforms, etc.....	469 08
Stamping pads, ink, etc.....	164 00
Mail bag fittings.....	24,851 56
Seals.....	375 50
Repairs to letter boxes, etc.....	51 20
Mail Clerk's tin boxes.....	556 41

ANNUAL CENSUS OF INDUSTRY OF CANADA

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census, covering statistics of fisheries, mines, forestry and general manufactures in Canada. This annual census is in addition to the Bureau's decennial census and the statistics of population, finance, education, etc. Preliminary reports on various industries have been reviewed in previous issues of the LABOUR GAZETTE. These preliminary reports are consolidated from time to time in general reports issued by the Bureau.

Slaughtering and Meat Packing Industry in 1924

The number of slaughtering and meat packing plants in operation in 1924 was 74, compared with 76 in 1923. The number included one in Prince Edward Island, 2 in Nova Scotia, 7 in New Brunswick, 20 in Quebec, 25 in Ontario, 7 in Manitoba, 2 in Saskatchewan, 5 in Alberta and 5 in British Columbia.

The value of meat sold fresh was \$56,610,297, an increase for the year of \$3,049,731. The value of cured products was \$38,126,440, a decrease of \$1,695,238 from the year 1923. The item "all other products" showed a value of \$2,999,996 compared with \$10,386,715 in 1923. This decrease is due to the exclusion of butter, cheese, eggs, etc., which may have been handled but were not products of the plants. The total value of all products sold in 1924 was \$133,740,271. The value of the capital investment in 1924 was \$56,675,118.

The average number of persons employed was 10,046, comprising 2,556 salaried employees and 7,490 wage earners. There were on an average 98 employees in the Maritime Provinces, 1,702 in Quebec, 5,260 in Ontario, 1,177 in Manitoba, 1,342 in Saskatchewan and Alberta, and 467 in British Columbia. The amount paid in salaries during the year was \$4,814,191 and in wages, \$8,313,313, a total of \$13,127,504. Of this, \$6,839,812, or over half, went to workers in Ontario, \$2,124,293 to Quebec, \$1,899,818 to Saskatchewan and Alberta, \$1,472,480 to Manitoba, \$691,659 to British Columbia and \$99,442 to the Maritime Provinces. The number of wage earners was higher in November than in any other month, being 8,421, the lowest number by months being 7,044, the total for April. The average number of days in operation for all establishments was 291.1, the average number of hours worked per week being 50.8 and per day, 8.9. The total number of wage earners working in month of highest employment 8 hours per day or less was 2,745; 9 hours, 3,770; 10 hours, 1,336; and over 10 hours, 627.

The total cost of animals slaughtered and materials used was \$106,764,011; and factory value of products sold was \$133,740,271.

Establishments manufacturing sausage and sausage casings numbered 30, there being 11 in Quebec, 11 in Ontario, one in New Brunswick, five in Manitoba, and two in British Columbia. The total capital invested was \$717,696, the number of employees being 203, receiving in

salaries and wages \$241,825. The cost of materials used was \$894,466 and the factory value of products sold was \$1,307,263.

There were five establishments manufacturing animal oils and fats, there being one in Quebec, three in Ontario, and one in Manitoba. The amount of capital invested was \$734,006. There were 104 employees, receiving in salaries and wages \$120,210. The cost of materials used was \$350,156 and the factory value of products sold was \$527,237.

Leather Industry in 1924

The number of tanneries in operation in 1924 was 114, a decline of nine from the previous year. New Brunswick had a decrease of one, Quebec of six, Ontario of one, and British Columbia of one.

The value of production was \$25,655,675 compared with \$23,607,728 in the previous year. These totals do not include the values of the hides and skins treated for others and classed under the head of custom work, but they include the amount received by tanners for this work. The capital investment was valued at \$30,031,624, of which \$25,480,379 was invested in Ontario. The total was \$316,844 below that of the previous year.

The average number of persons employed was 3,907, including 325 salaried employees and 3,582 wage earners. A table shows the number of wage earners by months and by provinces. Employment was highest in March, with 3,809 wage earners, and lowest in August when there were 3,376. In 1923 the average number of persons employed was 3,787. The total amount paid to employees was \$4,416,572, an increase of \$114,503 above the amount in 1923.

In the 114 tanneries the number of days in operation was 32,166, and the number of days idle was 2,490. The number of hours worked per day was 1,030 and per week 6,004. The average of days in operation for all tanneries was 282.1, the average number of hours per day was 9.0 and the average number of hours per week was 52.6. These figures are also given for each province.

The total value of imports of products of the leather industry (unmanufactured) for the year ending March 31, 1925, was \$3,954,482, a decline of \$216,146 from the previous year. Of the total, 83.2 per cent were from the United States; 15.2 per cent from the United Kingdom, and the remainder from other countries. The value of exports of products of the Canadian leather industry (unmanufactured) for the year ending March 31, 1925, was \$7,383,888, an increase of \$1,750,307 above the value for the previous year. The exports to the United States included 71.9 per cent of the

total; those to the United Kingdom included 22.4 per cent, while the remainder went to other countries.

Leather Boot and Shoe Industry in 1924

The number of pairs of boots, shoes and slippers manufactured during the year was 17,729,421, a decrease of 2 per cent from 1923. The value of the products was \$42,003,668 compared with \$45,596,012 in 1923. There were 183 establishments operating in 1924, which was three less than in the previous year, there being five each in Nova Scotia and New Brunswick, 103 in Quebec, 64 in Ontario and six in British Columbia. The total value of the capital investment was \$30,835,479, an increase of \$301,888. The average number of employees was 14,225, of whom 12,921 were wage earners and 1,304 salaried. The total amount paid to employees was \$13,772,451. The number of persons shows an increase of 182 and the amount paid in salaries and wages a decrease of \$178,993. There were also employed in 1924, 283 outside piece-workers earning \$40,888.

The number of days the 183 establishments were in operation during the year, on full or part time, was 52,109, with 3,467 days idle. The number of hours worked per week was 9,395. The number of wage earners in month of highest employment by hours of work was as follows: 3,615 working 8 hours per day or less; 6,329 working 9 hours; 4,117 working 10 hours and 784 working over 10 hours. The highest employment by months was shown in March and the lowest in September.

The value of footwear imported during the year ending March 31, 1925, was \$2,111,083, of which \$1,217,234 came from the United Kingdom and \$823,809 from the United States

Co-operative Medical Service in Alberta

The principles of co-operation have been applied in Alberta to secure medical attendance at reduced cost. The "Edgerton District Medical Board" consists of householders of the district, and the services of a physician have been enlisted, who receives as salary \$1.25 per member per month, payable in advance. This payment entitles the member and all members of his family under 21 years of age to medical attendance, when necessary. The fee covers ordinary medical treatment and minor surgery. Special fees, much below those charged ordinarily, are arranged for major surgery and midwifery. In cases where it is necessary for the doctor to attend patients at their homes the only extra charge is for conveyance. The medical man may engage in private practice, but it must not interfere with the duties he is called upon to perform under the contract.

PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1925

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight. The family budget in terms of retail prices advanced somewhat, due to seasonal influences, while the Dominion Bureau of Statistics index number of wholesale prices also showed a minor advance.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.89 at the beginning of October, as compared with \$10.81 for September; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. Besides substantial seasonal advances in the prices of eggs, milk and butter there were less important advances in the prices of veal, mutton, salt pork and bacon, but these increases were partly offset by declines in the prices of potatoes, flour, sirloin steak, bread, beans, evaporated apples, sugar, tea and coffee. Including the cost of fuel and rent with that of foods, the total budget averaged \$21.11 at the beginning of October as compared with \$21.02 for September; \$20.67 for October, 1924; \$21.16 for October, 1923; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, showed a fractional advance to 156.6 for October, as compared with 156.5 for September; 157.0 for October, 1924; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; and 256.7 for May, 1920 (the peak). Forty-seven prices quotations were higher, forty-eight were lower and one hundred and forty-three were unchanged.

In the grouping according to chief component material, two of the eight main groups were higher, five were lower, while one was practically unchanged. The Animals and their Products group and the Non-Ferrous Metals group both advanced, the former because of higher prices for butter, cheese and eggs and the latter because of advances in the prices of tin and zinc. The groups which declined were: Vegetables and their Products due to lower prices for grains, flour and other milled pro-

ducts, bread and sugar; Textiles and Textile Products due to lower prices for raw cotton and cotton fabrics which declines more than offset the advances in wool, silk and jute; Iron and its Products due mainly to a decline in the prices of steel bars; Wood and Wood Products because of lower prices for spruce; and Non-Metallic Minerals due to a fall in the price of glass. The Chemicals and Allied Products group was unchanged.

In the grouping according to purpose consumers' goods advanced substantially, while producers' goods were lower. The advance in the former group was due to higher prices for butter, cheese, eggs, potatoes, tea and foreign fruits which more than offset the lower prices for breadstuffs, meat and sugar. In producers' goods building and construction materials were lower because of declines in the prices of spruce, linseed oil and glass. Materials for the textile and clothing industries, for the meat packing industries, for the milling industries as well as miscellaneous producers' materials were also substantially lower.

In the grouping according to origin, raw or partly manufactured goods advanced, declines in grains, livestock, cotton and copper being more than offset by increases in eggs, potatoes, fruits, tea, fresh fish, wool, jute, silk, rubber, tin and spelter. Fully or chiefly manufactured goods declined, due to lower prices for flour and other milled products, bread, sugar, cotton fabrics, copper products and glass which more than offset the advances in the prices of butter, cheese and zinc products. Domestic farm products and articles of marine origin were higher, while articles of forest origin and articles of mineral origin declined.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, declined to 146 for September as compared with 150 for August; 148 for July and 145 for September, 1924. Grouped by stage of manufacture both raw materials and consumers' goods were lower, while producers' goods were unchanged. Grouped by origin domestic goods declined while imported goods were unchanged. Export goods were lower.

The Canadian Bank of Commerce index of exports fell from 155.52 for September to 155.45 for October, while that for imports rose from 160.25 to 164.21. The combined index

of both exports and imports rose from 157.88 for September to 159.83 for October.

Professor Mitchell's index number of forty articles, with prices during 1900 to 1909 as 100, rose from 177.0 for September to 178.0 for October. Foodstuffs advanced from 188.9 to 190.6 and manufacturers' goods from 165.0 to 165.3.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of October of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively

occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Prices of beef were lower in most localities, sirloin steak being down from an average of 29.2 cents per pound in September to 28.4 cents in October, rib roast from 21.6 cents per pound in September to 21.2 cents in

(Continued on page 1144)

(Continued from page 1135)

October, and shoulder roast from 15.3 cents per pound in September to 15.1 cents in October. Veal was slightly higher, averaging 18.3 cents per pound. Mutton rose from an average of 28.8 cents per pound in September to 29.2 cents in October. Increases were reported from most localities. Fresh pork was slightly lower, averaging 29.1 cents per pound, while salt pork advanced somewhat, averaging 26.7 cents per pound in October and 26.3 cents in September. Bacon was up from 40.8 cents per pound to 41.6 cents. Boiled ham was unchanged. In fresh fish cod steak averaged lower while halibut and whitefish were higher. Salt cod was slightly higher. Lard was unchanged in the average.

Eggs showed a general advance, fresh averaging 48.2 cents per dozen in October as compared with 43.3 cents in September and 40.8 cents in August, and cooking averaging 43 cents per dozen in October as compared with 39.2 cents in September and 37.1 cents in August. Milk was up from an average of 11.5 cents per quart in September to 11.8 cents in October. Higher prices were reported from New Glasgow, St. John, N.B., St. Hyacinthe, Montreal, Oshawa, Sudbury, Regina, Medicine Hat, Edmonton, Calgary and Lethbridge. Dairy butter showed a general advance, averaging 41.7 cents per pound in October and 38.8 cents in September. Creamery showed about the same general advance as dairy, averaging 47.7 cents per pound in October as compared with 44.2 cents in September. Cheese advanced from a naverage of 31.8 cents per pound to 32.3 cents.

Bread was slightly lower, averaging 7.8 cents per pound as compared with 7.9 cents in September. Lower prices were reported from Sherbrooke, St. Hyacinthe, Winnipeg, Prince Albert, Saskatoon, New Westminster and Vancouver. Flour was down from an average of 5.7 cents per pound in September to 5.4 cents in October. Lower prices were reported from most localities. Rolled oats were unchanged in the average. Rice and tapioca were slightly lower. Canned vegetables declined, tomatoes averaging 19.3 cents per tin in October as compared with 19.8 cents in September, peas 18.6 cents per tin in October and 18.9 cents in September, and corn 19.5 cents per tin in October and 20 cents in September. Beans were slightly lower, averaging 8.2 cents per pound. Onions declined from 7.2 cents per pound in September to 5.3 cents in October. Potatoes fell from an average of \$1.64 per ninety pounds in September to \$1.49 in October. Most localities in the Maritime Provinces

and in the West reported lower prices, while higher prices were reported from Quebec and eastern Ontario. Evaporated apples fell from an average of 20.5 cents per pound in September to 20.2 cents in October. Prunes were slightly lower, averaging 15.7 cents per pound. Raisins and currants were slightly lower. Sugar continued to decline, granulated averaging 8 cents per pound as compared with 8.2 cents in September, and yellow averaging 7.6 cents per pound as compared with 7.8 cents in September. Coffee and tea were slightly lower.

Anthracite coal rose from an average of \$16.68 per ton in September to \$16.77 in October. Increases in price were reported from Halifax, Fredericton, Quebec, Montreal, Belleville, Peterborough, Brantford, Stratford, Sarnia and Cobalt. Bituminous coal was up from an average of \$10.11 per ton in September to \$10.26 in October. Wood prices were practically unchanged, hard wood averaging \$12.19 per cord and soft wood averaging \$8.90 per cord.

A decline in rent was reported from Charlottetown and St. Hyacinthe.

Wholesale Prices

The following is a statement of price changes during the month issued by the Dominion Bureau of Statistics.

Grain prices continued to decline. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged \$1.27 per bushel in October as compared with \$1.37½ in September. The low price of \$1.18½ per bushel was reached near the beginning of the month, and the high of \$1.37 toward the end. The marketing of the Canadian crop and the apathy of foreign buyers tended to keep prices down during the greater part of the month, but toward the end bad weather conditions in western Canada and less optimistic reports from Australia, and from Russia and other European countries caused an advance in prices. Coarse grains fluctuated in sympathy with wheat. Western barley declined from 65½ cents per bushel to 63½ cents, western oats from 49 cents per bushel to 48 cents, flaxseed from \$2.36½ per bushel to \$2.33½, American corn from \$1.06½ to 96 cents. Flour at Toronto was down from \$8.65½ per barrel in September to \$8 in October. Oatmeal declined from \$5.25 per 98-pound sack to \$4.35. Bread at both Winnipeg and Vancouver fell from 7 cents per pound to 6 cents. Sugar prices continued to decline, raw at Toronto being down from \$3.84 per hundred to \$3.46, and granulated from \$6.12½ to \$5.84½. Prices of tea advanced. Raisins at Montreal rose from 11½ cents per pound to 14½ cents. The increase was said

to be due to the higher tariff. Lemons at Toronto advanced from \$5-\$5.75 per box to \$5.75-\$6.50. Bananas at Montreal were up from \$3.50 per bunch to \$4, and oranges from \$8.50 per case to \$9. Potatoes advanced substantially due to foreign demand. At Montreal the price advanced from 97½ cents per ninety pounds to \$1.48, and at Toronto the price advanced from \$1.30-\$1.40 per bag to \$1.71½. Linseed oil was down from \$1.16 per gallon to \$1.10. Ceylon rubber advanced from 89 cents per pound to 97¼ cents. Choice steers at Toronto fell from \$7.25 per hundred to \$6.97½. Hog prices were again lower, being down at Toronto from \$13.38 per hundred in September to \$12.68 in October. Beef, dressed, hindquarters at Toronto declined from \$16 per hundred to \$14.40, while dressed hogs were down from \$17.50 per hundred to \$17.30. Whitefish were up from 17 cents per pound to 20 cents while halibut declined 1 cent per pound to 12 cents. Creamery butter at Montreal rose from 42 cents per pound to 46 cents, creamery prints at Toronto from

44 cents per pound to 49 cents, and dairy prints from 36 cents per pound to 40½ cents. Cheese at Montreal advanced 2 cents per pound to 28 cents. The price of eggs again moved to higher levels, fresh being up from 45-48 cents per dozen to 55-60 cents. Raw cotton at New York fell from an average of 23.7 cents per pound in September to 21.9 cents in October. The increase in the official crop estimates was said to be the cause of the lower prices. Cotton fabrics also were lower, gingham being down from 17½ cents per yard to 17¼ cents, denim from 63 cents to 61 cents and shirting from 76½ cents to 75 cents per yard. Raw silk at New York advanced from \$6.85 per pound to \$6.90. Wool prices showed an advance of 2 cents to 3 cents per pound. Jute rose from \$12.46 per hundred to \$14.29, and hessians from \$12.50 per hundred to \$14.25. Ground wood pulp was slightly higher at \$26-\$32 per ton. Copper was down from \$16.55 per hundred to \$16.35. Tin was up from 59½ cents per pound to 63¼ cents and zinc from \$9.30 per hundred to \$9.85.

Vacations with Pay in Industries in New York State

A special bulletin (Number 133) issued by the Department of Labour of the State of New York, gives the results of a recent inquiry into policy of manufacturers in regard to vacations with pay.

Vacations with pay were given to office workers in 91 per cent of the plants, to foremen in 68 per cent, to production workers in 18 per cent. Certain types of production workers were in some cases excluded from vacation policies; these were in most instances piece workers. Large plants more often than small plants had vacation policies for production workers; 30 per cent of the plants having more than 500 employees as opposed to 15 per cent of those having less than 100 employees. The chemical and food industries had a large proportion of plants which had vacation policies for production workers; the textile, wood, leather, stone, clay and glass industries a small proportion.

The usual length of vacation for office workers was twice that for production workers, the majority of plants giving two weeks vacation to office workers and one week to production workers. Eligibility for vacation was based primarily upon a minimum period of employment, 60 per cent of the plants requiring that all workers, office, foreman and production, be employed a year in order to qualify for vacation. The usual basis of pay for time workers was the full weekly wage; for piece workers the average weekly wage. Vacations were almost universally given during the

summer months. A general shut down during the vacation period occurred in 17 per cent of the plants which gave vacations to production workers.

Seventeen factories or 6 per cent of the plants which had established vacation policies for production workers, had abandoned them. Of those plants which had maintained vacation policies, 98 per cent found them satisfactory.

A Course in Co-operation

The Co-operative Union of Canada strongly recommends local societies to secure copies of the "Handbook for members of Co-operative Committees" published by Professor Hall under the auspices of the British Co-Operative Union. *The Canadian Co-operator* states that the educational department of the British Co-operative Union has organized a correspondence course in co-operative committee work, in about twenty lessons, using the "Handbook for members of Co-operative Committees" as the text book. "What British Co-operators call Management Committees we refer to as Boards of Directors. While some of the instructions in the course deals with conditions peculiar to Britain, the greater part applies with equal value to this country. If any directors of our societies wish to take this course, the Co-operative Union of Canada will be pleased to take up the matter on their behalf. Hitherto the British Union has been prepared to extend its courses to students in Canada."

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

According to the latest reports available, there was no marked tendency in prices. In Great Britain and France there was a slight downward tendency due to lower prices of vegetable foods. Prices in the United States displayed an upward tendency.

Great Britain

WHOLESALE PRICES.—The *Economist* index number, on the base 1901-05=100, was 196.7 at the end of October, a decline of 2.2 points. This change was caused by a decline of 5.1 per cent in cereals and meat and one of 3.8 per cent in textiles.

The Board of Trade index number for September, on the base 1913=100, declined one point to 156.0. Foods and non-foods each declined on the whole 0.7 per cent. The only groups to show an increase were meat and fish and textiles other than cotton.

The *Statist* index number (in continuation of Sauerbeck's figures, base period, 1867-77) declined in September 1.2 per cent to 132.7. With the exception of the index for June last (131.2) this is the lowest number in any month since November, 1923. Materials showed a rise of 0.6 per cent, the decline in the general index being due to a recession of 3.8 per cent in foodstuffs.

The *Times* index number, on the base 1913=100, showed at the end of September only a slight change compared with a month earlier, standing at 158.8 as compared with 159.0.

"The feature in September was the weakness of prices of cereals, particularly wheat, the markets being influenced by the larger crops harvested in Europe and Canada. This decline, however, was largely offset by increases in the two other food groups, the index figure for all food prices being only 0.7 per cent lower than a month ago at 161.9." Industrial materials were 0.2 per cent higher than for August.

COST OF LIVING.—The index number of the Ministry of Labour showed no change at the end of October either in the total or in any of the groups.

France

WHOLESALE PRICES.—The index number of *Statistique Générale* on the base July, 1914=

100, declined 2 points in September to 567. All the food groups declined, the combined index falling 1.6 per cent. Minerals and metals and the miscellaneous group advanced slightly, and textiles remained the same. The combined index of materials rose 0.6 per cent.

COST OF LIVING.—The official index number of cost of living for Paris for the third quarter of 1925 rose 2.8 per cent to 401. All elements of the budget contributed to the rise. Foods rose 1.6 per cent; heat and light rose 8.1 per cent; rent rose 10 per cent; clothing rose 3.4 per cent, and sundries rose 2.2 per cent.

Spain

WHOLESALE PRICES.—The official index number of the Director General of Statistics, on the base 1913=100, was 185 in September, an increase of one point over the August level. Animal foods rose somewhat, vegetable foods declined and other foods showed no change, so that the index for foods was unchanged. Fuels, metals and construction materials declined, textiles and leather advanced, and the miscellaneous group showed no change. The index for the materials section rose 3 points to 180.

RETAIL PRICES.—The official index number of retail prices at Madrid, on the base prices in 1914=100, was unchanged in September at 190.

South Africa

WHOLESALE PRICES.—The official index number of the Office of Census and Statistics, published every three months, and having as base index for 1910=1000 was 1424 for July as against 1460 for April, a decline of 2.4 per cent. Advances were shown by the leather group, by dairy produce, and by meat, and declines by metals, by grains, meals, etc., and by groceries, building materials and chemicals. Other groups were practically unchanged. South African goods declined 3.7 per cent to 1296 and imported goods declined very slightly to 1720.

RETAIL PRICES.—The official index number of retail prices in nine principal towns, on the base 1910 average on nine towns=1000, showed for food only a decline in August from the previous month of 1.1 per cent to 1367. The index for food, fuel, light, rent and sundries declined very slightly to 1444.

China

WHOLESALE PRICES.—The index number of the Treasury Department (Bureau of Markets), on the base February, 1913=100, re-

mained almost unchanged in September at 160.2. Cereals, other foods, and textiles fell slightly, while metals rose considerably. In the average of the miscellaneous groups there was a decline of nearly one per cent. There was a drop of 2.6 per cent in industrial materials, and very slight declines in the remaining groups, fuels, building materials and sundries.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1913=100, was slightly lower in September, registering 159.7. There were no marked changes in the groups. Farm products declined 1.3 per cent, and building materials and house furnishing goods each rose almost one per cent. The miscellaneous group declined 2.2 per cent.

Dun's index number (showing the cost *per capita* of a year's supply of commodities) showed an increase of 1.2 per cent at November 1, reaching \$197.159. The index number figures for five of the seven groups were higher than a month previous, the exceptions being meats and clothing. The declines were each

only a little over 1 per cent, whereas there was an increase of about $6\frac{1}{2}$ per cent in dairy and garden products alone. For all foods together there was a rise of 2.4 per cent. Metals advanced 1.1 per cent and miscellaneous commodities 0.5 per cent.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was \$14.3173 on November 1. This was a gain of 1.2 per cent for the month.

Thirty-two articles advanced as against twenty-eight which declined, and forty-two which remained unchanged. Seven groups rose as against six which declined, showing that the movements within the groups were irregular. Responsibility for the ultimate rise rests practically with rubber, in active demand in the automobile manufacturing industry.

COST OF LIVING.—The index number of Special Commission of the Necessaries of Life of cost of living in Massachusetts, having as base average retail prices in 1913=100, was 163.9, only slightly below the number for the previous month (164.4). Foods and fuel and light showed no change; the clothing index increased, and shelter and sundries decreased in price.

COMPARISON OF PURCHASING POWER OF WAGES IN TERMS OF FOOD AND RENT IN CAPITAL CITIES IN VARIOUS COUNTRIES

SINCE July, 1924, the International Labour Office has maintained the record of the comparative real wages in various countries. This has been compiled and published by the British Ministry of Labour in the *Ministry of Labour Gazette* since 1923. Summaries of these figures were given in the *LABOUR GAZETTE* in August, 1923, June 1924, and December, 1924.

As before, the purpose of the calculations is to show the comparative amounts of food which can be purchased in the various cities with the wages of 'forty-eight hours' work. For this purpose index numbers were calculated by taking as 100 the amount of each article of food which 'forty-eight hours' wages in each trade would purchase in London, and then finding what ratio of 100 would represent the corresponding amount for each article of food and each trade in each other city included. These ratios or "index numbers"

were then averaged for each city for all trades included.

The International Labour Office has calculated the averages weighted according to British standards of consumption and has produced averages weighted according to standards in various groups of countries with more or less similar standards of living.

In addition by taking an average of the results according to the six standards so adopted, a general average is produced which stands as an international average by means of which the standard of living in each city can be compared to that in London.

A calculation has also been made as to the comparative purchasing power of the wages if an allowance is made for rent payments as well as for food costs and this appears in the last column of the table of index numbers.

INDEX NUMBERS OF COMPARATIVE REAL WAGES (OR COMPARATIVE PURCHASING POWER OF MONEY—WAGES) IN LONDON AND CERTAIN CITIES ABROAD AT JULY 1, 1925

(London = 100).†

City	Food only						Food and Rent	
	Index Numbers based on quantities of each kind of food consumed in						General Average index nos. (based on food only)	General Average index nos. (with allowance for rent)

Tallin.....	33	41	34	34	40	38	37	38

†Average for all occupations covered by the enquiry.

‡The figures for Lisbon, as well as those for Rome and Milan, are relatively low. This may be accounted for in part by the differences in the items of food consumption in these countries from those ordinarily consumed in most of the other countries included in the table. The budgets used in the comparisons do not make adequate allowance for the large consumption of vegetable foods in the southern European countries.

§Based on a weighted average wage. For other cities an unweighted average of wages has been used.

FUEL SUPPLIES AND STRIKE OF COAL MINERS IN THE UNITED STATES

THE circumstances leading up to the strike of anthracite coal miners in the United States on September 1, on the expiration of the agreement under which they had been working since September, 1923, at which date an increase in wages of ten per cent had been agreed on as the result of the findings of a Pennsylvania State inquiry, were outlined in the LABOUR GAZETTE for September, p. 875. During October, as during September, no events of importance transpired in connection with the dispute. Early in November the Governor of Pennsylvania, where the mines are situated, interviewed the parties concerned with a view to a resumption of negotiations and an early settlement of the dispute. There was also some discussion in the press of the possibility of action by Congress when it meets early in December if the strike were not then settled, particularly the possibility of the enactment of the legislation recommended by the Coal Commission appointed after the strike in 1922 (LABOUR GAZETTE, August, 1923, p. 873). One of the recommendations was that the President be empowered, when a suspension of anthracite mining occurs to declare a national emergency exists, to

determine the conditions of operation and to take over the operation of the mines.

Reports indicated that by the end of October supplies of anthracite coal were becoming small and were confined to pea coal and small sizes, and that in some cities prices were rising, as high as \$23 per ton being reported in New York.

In Canada no considerable increase in retail prices of anthracite coal appeared, the average price for the Dominion being \$16.77 for October as compared with \$16.68 in September, and \$16.58 in October, 1924. Figures for the various cities appear in the regular prices article. Wholesale prices of anthracite coal also rose only slightly as is usual in the summer and early autumn to meet storage and carrying charges. The market for bituminous coal and for coke has been much firmer since the strike began and coke plants are reported to have been working to capacity and prices have risen somewhat at the ovens. Furnace coke rose from \$3 per ton in August to \$4 at the end of September, and \$8.50-\$9 at the end of October. Crushed coke used for household consumption was \$1 or \$2 per ton above the furnace coke. At Toronto household coke rose from \$8.50

per ton wholesale to \$9 in September, and to \$9.50 in October. Foundry coke, being less suitable for household furnaces, was not much in demand.

It was also reported in the press that the use of substitutes was extensive, particularly fuel oil, coke and certain grades of bituminous coal. There were also extensive shipments of coal from Wales and Scotland to Canada, and to the United States.

Measures for the conservation and distribution of domestic fuel supplies have been taken in certain parts of Canada and the United States. The Dominion Fuel Board and the Federal Fuel Advisory Committee in July and in August issued warnings to the public to stock up so far as possible with supplies of whatever fuel was desired for the winter in view of the impending strike. The efforts to make an experiment, on a large scale, in the shipping of Alberta coal to Ontario, to ascertain whether the costs of transportation were too great to make such shipments practicable, were intensified to some extent by the possibility of the anthracite miners' strike, and about 20,000 tons were shipped. In Montreal and Toronto the civic authorities took steps to secure an increased supply for the relief of the destitute and others who might be

unable to secure fuel in the winter. The fuel controller for Ontario pointed out that the use of anthracite had decreased about twenty per cent since 1922, chiefly owing to the use of coke as a substitute, and the problem would not be as serious as formerly. It was also pointed out that shipments of coal from Wales had increased greatly and that there were large supplies of bituminous coal, so there would be no shortage of coke owing to scarcity of the coal for its production. It also was reported that supplies of domestic grades of bituminous coal in suitable sizes, and in low volatile and smokeless grades were plentiful.

In the New England states where the lack of anthracite coal is serious the governors of the states convened and appointed a committee under the chairmanship of Mr. John Hays Hammond, who had been chairman of the United States Coal Commission in 1923, to advise as to supplies of fuel. In Massachusetts the Special Commission on the Necessaries of Life (established in 1921) as on previous occasions, took steps to collect and forward to the state government and to municipalities information as to the fuel situation and to ensure the proper distribution of fuel available.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1925

ACCORDING to reports received by the Department of Labour, industrial accidents were responsible for a loss of 262 lives during the quarter of the year ended September 30 last. There were also twenty-five fatalities reported during that period which occurred earlier in the year and which are listed in the accompanying table. The reports showed 92 fatalities occurring in July and 85 and 87 respectively in August and September, as compared with 124 in July, 133 in August and 87 in September of 1924, or a total of 344 for the third quarter of last year. In the quarter under review, 29 fatalities occurred in the agricultural group, 4 in fishing and trapping, 16 in logging, 39 in mining, 42 in manufacturing, 39 in construction, 67 in transportation and public utilities, 8 in the public and municipal services, 3 in trade, and 16 were miscellaneous.

In only comparatively few case did the accidents result in the death of more than one person. Three deaths were caused, however, at the Welland Ship Canal when a cable snapped causing the collapse of a "blow form" inside a two-inch steel shackle. The Coroner's Jury investigating the case recommended that greater precaution should be taken and addi-

tional safety devices used to protect the lives of workmen on the construction of the Welland Ship Canal. Two men were also killed by the bursting of a water trap on a steamer and two by falling from a ladder on the side of a steamer, one man being struck by the other when he fell. In the case of a boy of 14 years employed at a sand pit in Ontario, the jury found that the owners of the pit were in error in employing the boy, as he was under the age required by the Ontario Mining Act which states (Section 157) "No male person under the age of sixteen years shall be employed in or about any mine or under the age of eighteen years below ground in any mine." In another case it was found that a trolley wire was suspended too low to guarantee safety to employees unloading cars at a rubber factory, and it was strongly recommended that all trolley wires on sidings be raised to the level required by regulations set by the Board of Railway Commissioners for Canada.

The following table has been prepared from information received from all sources available, but it does not necessarily include all the industrial accidents that may have occurred:—

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1925

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Farmer.....	St. Edwards (Lotbinière), Que.	July 3..	34	Fell on saw.
Farmer.....	Whitby, Ont.....	" 3..		Fell from mow.
Farmer.....	Cargill, Ont.....	" 6..		Struck by lightning.
Rancher.....	Kamloops, B.C.....	" 17..	45	Drowned. Drove water cart into river and horses sank in hole.
Farmer.....	Grand Valley, Ont.....	" 17..		Run over by horses.
Farmer.....	Paddockwood, Ont.....	" 18..	19	Struck by falling tree.
Thresher.....	Ayr, Ont.....	" 25..		Scalded. Water glass broke when engine backed and collided with separator.
Farmer.....	Forest, Ont.....	" 26..	16	Struck by lightning.
Farmer.....	Darlington, P.E.I.....	" 29..		Struck by lightning.
Farmer.....	Saskatoon, Sask.....	" 31..		Buried when well caved in.
Farmer.....	Grantham Township, Ont.	Aug. 11..		Fell from mow.
Farmer.....	Ste. Dorothée, Que.....	" 13..	38	Fell in front of binder.
Thresher.....	Brantford, Ont.....	" 14..	65	Tractor overturned in creek.
Farmer.....	Darlington, P.E.I.....	" 25..	40	Thrown from wagon.
Farmer.....	Near Milton, Ont.....	" 27..	87	Struck by falling bag of wheat used on trip rope to speed up drawing.
Farmer.....	St. Agapit, Que.....	Sept. 5..	47	Struck by stray bullet.
Farmer.....	Harrison, Ont.....	" 14..		Run over by binder.
Farmer.....	Hamiota, Man.....	" 14..		Caught in belt.
Farmer.....	Domremy, B.C.....	" 14..		Pulled into tractor when rope about neck caught in rod.
Farmer.....	Chesterville, Ont.....	" 18..		Struck by train.
Farmer.....	Prince Albert, Sask.....	" 15..		Thrown from tractor and caught in binder rope.
Thresher.....	Carrievale, Sask.....	" 16..		Crushed between engine and separator.
Thresher.....	Swift Current, Sask.....	" 21..	36	Drawn into wheel while placing belt on machine.
Harvester.....	Belleville, Ont.....	" 21..	18	Kicked by horse.
Farmer.....	Listowel, Ont.....	" 21..	70	Struck by train.
Farmer.....	Near Delhi, Que.....	" 25..	87	Struck by train at farm crossing.
Engineer on tractor.....	Vancouver, B.C.....	" 25..		Fell under tractor.
Farmer.....	St. Tite des Caps, Que.....	" 29..	Over 21	Shot when taken for moose.
Farmer.....	Lucky Lake, Sask.....	" 28..		Fell from wagon when horses became restless.
FISHING AND TRAPPING—				
Fisherman.....	Prince Rupert, B.C.....	July 31..		Drowned.
Fisherman.....	Skeena River, B.C.....	" ..		Drowned when boat was struck by schooner.
Fisherman.....	Queensport Harbour, N.S.	Aug. 21..		Fell overboard—drowned.
Fisherman.....	New Westminster, B.C.	Sept. 23..		Drowned.
LOGGING—				
Logger.....	McNabb Creek, B.C.....	July 3..		Struck by stone from blast.
Sawyer.....	Montreal, Que.....	" 9..	68	Struck by saw.
Logger.....	Duncan, B.C.....	" 10..		Struck by falling limb.
Labourer.....	Ashland, Wis., U.S.A.....	" 12..		Drowned.
Logger.....	Quatsino, B.C.....	" 15..		Struck by falling concrete block.
Logger.....	Hayden Lake, B.C.....	" 20..	45	Struck by tree which was leaning against one being felled.
Labourer.....	Shelter Bay, Que.....	" 28..	50	Struck by log.
Logger.....	Vancouver, B.C.....	" 28..		Crushed by falling tree.
Engineer.....	Allanwater, Ont.....	" 28..		Drowned.
Fire fighter.....	Stillwater, B.C.....	" 29..	52	Struck by tree.
Signalman.....	Port McNeill, B.C.....	Aug. 5..	18	Log being hauled struck boomstick causing it to swing and strike workman.
Labourer.....	Byng Inlet, Ont.....	" 8..		Struck by saw.
Driver.....	Whitefish Falls, Ont.....	" 12..	24	Drowned.
Labourer.....	Elk Lake, Ont.....	" 22..		Drowned.
River driver.....	Peterboro, Ont.....	" 28..		Slipped from log boom—drowned.
Logger.....	Edgewood, B.C.....	Sept. 9..	27	Tree being felled struck another tree which broke and fell on workman.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1925 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, SMELTING AND QUARRYING				
<i>Metaliferous mining—</i>				
Miner.....	Britannia Beach, B.C.	July 14..		Fell through grizzly over chute to muck-pile below.
Miner.....	Granby, B.C.	" 14..		Caught and squeezed by trip loaded cars.
Fireboss.....	Cassidy, B.C.	" 14..		Attempted to jump from car in motion—run over.
Miner.....	Gowganda, Ont.	Aug. 7..	23	Struck by blocking falling down shaft.
Miner.....	Kimberley, B.C.	" 3..	42	Buried under ore when roof of slope fell.
Labourer.....	Frood Mine, Ont.	" 1..		Crushed by hoist.
Miner.....	Sardis, B.C.	" 8..		Fell down mine shaft.
Employee.....	Frood Mine, Ont.	" 9..		Crushed when cage jammed in shaft.
Scaler.....	Galetta, Ont.	" 10..	34	Buried under cave-in of rock in slope.
Miner.....	Timmins, Ont.	" 15..		Crushed by steel in cage.
Shift boss.....	Timmins, Ont.	" 15..		Carried down with ore run in mine.
Engineer.....	Levack, Ont.	" 25..		Collision between jitney and railway engine.
Miners (2).....	North Cobalt, Ont.	Sept. 5..	35, 27	Bucket dropped down shaft.
Blaster.....	Timmins, Ont.	" 5..		Explosion of dynamite underground.
Miner.....	Boston Creek, Ont.	" 25..	35	Premature blast.
<i>Coal mining—</i>				
Miner.....	Coalhurst, Alta.	July 3..	49	Fall of rock from roof.
Miner.....	Nanaimo, B.C.	" 6..	38	Struck by rail on coal car.
Miner.....	Coleman, Alta.	" 9..		Crushed by fall of coal.
Miner.....	Drumheller, Alta.	" 10..		Struck by plank which fell down shaft.
Carpenter.....	Cumberland, B.C.	" 12..		Drowned in colliery flume.
Miner.....	Edmonton, Alta.	Aug. 12..		Struck by falling debris.
Miner.....	Hillcrest, Alta.	" 17..		Struck by falling coal.
Miner.....	Bellevue, Alta.	" 18..		Crushed by fall of coal.
Foreman.....	Sydney, N.S.	" 26..		Struck by empty coal car.
Miner.....	Minto, N.B.	Sept. 11..		Crushed by falling rock.
Miner.....	Nanaimo, B.C.	" 10..	Over 21	Struck by fall of rock.
<i>Non-metallic mineral mining and quarrying:</i>				
Electrician.....	Thetford Mines, Que.	July 2..	29	Electrocuted.
Employee at gravel pit.	Porteau, B.C.	" 6..	24	Run over by car.
Driller.....	Asbestos, Que.	" 6..	36	Drill exploded.
Driller.....	Asbestos, Que.	" 8..	36	Struck by handle of land derrick.
Chore boy at sand pit.	Mount Dennis, Ont.	" 11..	14	Crushed under cave-in.*
Workman at sand pit.	Stamford Tsp., Ont.	" 24..		Deaf man was buried when bank gave way.
Drill helper at quarry.	Hagersville, Ont.	" 29..		Electrocuted by grasping lines connected with a drill.
Teamster.....	Jonquiere, Que.	" 29..	13	Buried under fall of ground in sand pit.
Miner.....	Thetford Mines, Que.	Aug. 7..	39	Struck by hanging chain forgotten on a running shaft.
Driller.....	Coleraine, Que.	Sept. 4..		Fall of rock from side of open cast pit.
Brakeman.....	Asbestos, Que.	" 10..		Caught between bars when coupling cars.
<i>Clay products and structural materials:</i>				
Brickworker....	Edmonton, Alta.	Aug. 4..	over 21	Caught in wheel.
MANUFACTURING—				
<i>Vegetable foods, drink and tobacco:</i>				
Employee at sugar refinery.	Halifax, N.S.	July 6..	72	Fell down elevator shaft.
Salesman with bread company.	Elsmted, Ont.	Sept. 11..	23	Struck by train.
Employee at sugar refinery.	Galt, Ont.	" 28..	21	Thrown to pavement when rope broke.
Employee at pickle factory.	Chatham, Ont.	" 13..	22	Scalded when kettle burst.

*Jury found that boy was under the age required by the Ontario Mining Act.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1925 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—				
Con.				
<i>Animal edible products:</i>				
Driver for dairy..	Hamilton, Ont.....	July 29..		Struck by car.
<i>Textiles:</i>				
Employees of silk plant. (3)	Cornwall, Ont.....	July 14..	42, 23, 57	Asphyxiated by gas in a vat under repairs.
<i>Rubber goods:</i>				
Employee at rubber plant.	Kitchener, Ont.....	Sept. 26..		Electrocuted while unloading coal.*
<i>Pulp, paper and paper goods:</i>				
Employee at pulp mill.	Temiskaming, Ont.....	July 15..	34	No particulars.
Employee at paper mill.	Three Rivers, Que.....	" 17..		Fell on circular saw.
Employee at paper mill.	Port Arthur, Ont.....	Aug. 9..	23	Stepped on shaft driving conveyor.
Employee at paper mill.	Iroquois Falls, Ont.....	Sept. 5..		Slipped into conveyor.
Employee at paper mill.	Donnacona, Que.....	" 14..		Caught on shaft.
Employee at pulp mill.	Quebec, Que.....	" 15..	38	Electrocuted.
Labourer at paper mill.	Cornwall, Ont.....	" 22..	20	Caught by load which slid from sling into hold of boat.
<i>Wood products:</i>				
Woodworker....	Galt, Ont.....	July 24..	68	Caught in saw while reaching across.
Employee at broom factory.	Sherbrooke, Que.....	Aug 21..	26	Struck by falling iron—blood poisoning.
<i>Saw and planing mill:</i>				
Employee at saw-mill.	Tamworth, Ont.....	July 10..		Crushed between scantling and drive shaft
Foreman at saw-mill.	Sioux Lookout, Ont....	13..	45	Kicked by a horse.
Employee at saw-mill.	Northumberland, N.B..	Aug. 13..	34	Struck by deal from edger.
Employee of mill.	Hintonburg, Ont.....	" 13..	64	Crushed between wagon and lumber when team took fright.
Employee of mill.	Victoria, B.C.....	" 19..		Struck by falling smoke stack.
Employee of mill.	Oshawa, Ont.....	" 24..		Struck by knife of shaping machine.
Employee at mill.	Lake Figuery, Que.....	Sept. 2..		Struck by saw which flew from machine.
Employee of mill.	St. Henedine, Que.....	" 2..	26	Struck by board thrown from saw.
Labourer.....	Callender, Ont.....	" 15..		Caught in roller of machine.
<i>Iron, steel and products:</i>				
Operator at forging plant.	Swansea, Ont.....	July 6..	32	Hernia.
Car repairer.....	Fort Erie, Ont.....	" 12..	52	Crushed by truck.
Labourer at railway shop.	Montreal, Que.....	" 13..	68	Crushed between cars.
Machinist.....	Norwood, Ont.....	" 24..		Caught in belt.
Boilermaker's helper.	Hamilton, Ont.....	Aug. 15..	54	Poisoned by fumes from torch.
Employee at steel plant.	Sydney, N.S.....	" 27..	65	Hit by car in yard of steel plant.
Labourer.....	Anyox, B.C.....	" 18..	33	Struck by bar while barring skip.
Painter at railway shop.	Montreal, Que.....	" 31..	52	Pinned beneath scoop of snowplough while shunting.
Foreman at motor corporation.	Oshawa, Ont.....	Sept. 2..	38	Struck by knife which broke from shaping machine.
Blacksmith.....	Tatamagouche, Que....	" 6..	57	Struck by lightning.
Fitter at steel plant.	Hamilton, Ont.....	" 10..		Fell off car roof.
Pipefitter's helper	Humboldt, Sask.....	" 11..	62	Struck by pipe which fell when rope broke.
Labourer at smelter.	Welland South, Ont....	" 18..	42	Electrocuted.

*The coroner's jury found that a trolley wire was suspended too low to guarantee safety to employees unloading cars and it was recommended that all trolley wires on sidings be raised to the level required by regulations set by the Dominion Board of Railway Commissioners.

<i>Chemical and allied products:</i>				
Employee of alcohol factory.	Montreal, Que.....	Aug. 25..	36	Electrocuted when pipe used to test molasses in car touched overhead wire.
Employee at industrial alcohol factory.	Corbyville, Ont.....	Sept. 9..	57	Fainted in elevator and caught between elevator and floor.
CONSTRUCTION—				
<i>Buildings:</i>				
Bricklayer's helper.	Montreal, Que.....	July 8..		Fell off scaffold.
Carpenter.....	Beauharnois, Que.....	" 16..	23	Fell off scaffold.
Labourer.....	New Toronto, Ont.....	Aug. 6..	25	Fell from hoist when crosspiece broke.
Labourer.....	London, Ont.....	" 10..	44	Fell off beam.
Carpenter.....	Scarboro, Ont.....	" 14..		Fell off saw bench.
Builder.....	Toronto, Ont.....	" 24..	56	Fell from roof.
Labourer.....	Toronto, Ont.....	Sept. 4..		Fell into excavation under drain-digging machine.
Labourer.....	Vancouver, B.C.....	" 15..		Struck by automobile which ran down incline when brakes failed to hold.
Labourer.....	Quebec, Que.....	" 16..	Over 21	Fell from third storey.
Roofer.....	Toronto, Ont.....	" 26..		Fell from ladder.
Labourer.....	Wallaceburg, Ont.....	" 26..	21	Fall caused by breaking of cable.
<i>Railways:</i>				
Labourer.....	London, Ont.....	Sept. 4..	46	Cut finger—infection.
Workman.....	St. Maurice, Que.....	" 25..	24	Fell from scaffold.
<i>Miscellaneous:</i>				
Bridge painter....	St. Thomas, Ont.....	July 8..	42	Fell from bridge.
Employee at road work.	Irricana, Alta.....	" 10..	19	Thrown from road scraper and run over.
Painter.....	Lake St. Jean, Que.....	" 12..		Fell off scaffold.
Employee at road work.	Prescott, Ont.....	" 12..	17	Crushed by stone crusher.
Carpenter.....	Toronto, Ont.....	" 22..		Blow on face—strain.
Sub-contractor...	Blenheim, Ont.....	" 22..		Electrocuted. Took hold of iron pipe—while using axe on pillar through which ground wire ran.
Labourer.....	Island Falls, Ont.....	" 27..	26	Leg broken.
Labourer.....	Merritton, Ont.....	" 31..	33	Run over by train.
Employees at canal construction (3).	Thorold, Ont.....	Aug. 1..	52	Crushed by cement. Cable snapped causing collapse of "blow form."*
Labourer.....	New Toronto, Ont.....	" 6..	25	Crushed by hoist.
Labourer.....	Hull, Que.....	" 12..		Struck by cement chute which fell.
Labourer at elevator construction.	Owen Sound, Ont.....	" 15..	24	Struck by bucket.
Painter.....	Montreal, Que.....	" 17..	55	Fell on scissors.
Driller.....	Humberstone, Ont.....	" 18..		Struck by train.
Painter.....	Toronto, Ont.....	" 20..		Lead poisoning.
Labourer at paving work.	St. John, (Near London) Ont.	" 21..		Crushed by cement mixer.
Aqueduct foreman.	Montreal, Que.....	" 29..		Valve fell breaking legs and pneumonia developed.
Carpenter.....	Richard's Landing, Ont.	Sept. 10..	46	Fractured skull.
Iron work at dock	Port Arthur, Ont.....	" 14..	31	Fell off bridge.
Labourer.....	Nome, Alta.....	" 21..		Crushed in revolving screen of dredge.
Labourer.....	Hamilton, Ont.....	" 23..	36	Crushed by pipe.
Labourer.....	St. Catharines, Ont.....	" 24..	38	Struck by falling rock.
Contractor.....	Thorold, Ont.....	" 24..		Train struck truck.
Pipe layer.....	Edmonton, Alta.....	" 29..		Cave-in of ditch.

*The jury recommended "that every precaution should be taken and additional safety devices used to protect the lives of workmen on the construction of the Welland Ship Canal."

Labourer.....	Montreal, Que.....	" 24..	43	Electrocuted.
Engineering class student.....	Edmonton, Alta.....	" 28..	under 21	Hit by iron bar which caught in fly wheel.
Labourer.....	Montreal, Que.....	" 29..	52	Caught in shaft.

*The jury in rendering its verdict expressed the belief that men of the experience of the deceased, working in close proximity to such exposed electrical hazards, should not be allowed to do such work alone and should always have with them an experienced man.

Supplementary List of Fatal Industrial Accidents occurring during the First and Second Quarters of 1925

Trade or Industry	Locality	Date	Age	Cause of Fatality
MISCELLANEOUS—				
Labourer with lumber company.	Black River, Que.....	Jan. 29..	40	Crushed under sleigh.
Logger.....	Pantledge, B.C.....	Feb. 21..	31	Getting slab wood out for logging road, slipped and fell from pile.
Labourer.....	So. Westminster, B.C...	Mar. 13..	30	Tetanus. Foot went into hole on log deck and rolling log broke leg.
Logger.....	Drayney Inlet, B.C.....	Apr. 1..	17	Hand caught in straw line around drum throwing head against crank.
Labourer.....	Huntsville, Ont.....	" 24..	58	Fell off scaffold.
Timberman.....	Schumacher, Ont.....	" 27..	43	Struck by rock.
Brakeman.....	Allico, B.C.....	" 30..	33	Fell from logging railway.
Mucker.....	Quesnel, B.C.....	May 7..	30	Struck by material from roof.
Stream driver....	Northumberland Co., N.B.	" 6..	18	Fell into river.
Labourer.....	Courtenay, B.C.....	" 16..	38	Struck by lumber which rebounded from saw.
Labourer.....	Ottawa, Ont.....	" 13..	74	Crushed by wagon.
Labourer.....	Sargent Pass, B.C.....	" 30..	38	Drowned—working on boom.
Riverman.....	Bull River, B.C.....	" 22..	45	Boat upset while releasing log jam.
Messenger.....	Vancouver, B.C.....	" 29..	17	Collision with automobile while riding bicycle.
Logger.....	Merry's Spur, B.C.....	June 1..	57	Struck by rolling log.
Teamster.....	Port Haney, B.C.....	" 4..	50	Struck by falling tree.
Employee of lumber company.	Pembroke, Ont.....	" 6..	62	Run over by yard train.
Handyman.....	Harrison Lake, B.C.....	" 8..	24	Fell from boom-stick—drowned.
Labourer.....	York Co., N.B.....	" 11..	14	Struck by flying rock from blast.
Logger.....	Dove Creek, B.C.....	" 11..	47	Crushed by falling tree.
Logger.....	Port Renfrew, B.C.....	" 11..	35	Struck by log that broke in two.
Employee of coal and wood firm.	Sault Ste. Marie, Ont...	" 17..	38	Electrocuted while moving electric coal loader.
Logger.....	Jervis Inlet, B.C.....	" 22..	26	Struck by line which rebounded when jack strap broke.
Patrolman.....	Picton, Ont.....	" 27..	63	Leg fractured.
Employee of paper mill.	Ottawa, Ont.....	" 27..	Burned when transformer blew out.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Picketing to Injure a Man in his Trade Held Unlawful

THE Appellate Division of the Supreme Court of Alberta, in a judgment handed down on October 10, dismissed an appeal against the conviction by a police magistrate at Calgary of two men charged with picketing the Palace Theatre. The facts of this case are stated in the judgment, as follows:—

The two defendants were employed to distribute and did distribute printed handbills reading as follows: "Locked out; Union Employees: Palace Theatre does not use Union Musicians, moving picture operators or state employees. Union men will not patronize; others are asked not to."

The distribution was made by the two defendants, one operating on each side of the front of the Palace Theatre for a distance up and down the street, the handbills being

handed to persons apparently prospective customers of the theatre. These men were employed by an organization called the Calgary Theatrical Federation which procured for each of them a license from the city of Calgary to distribute circulars on the streets. The two defendants were in their operations acting under the personal direction of two men, apparently members of the federation, and at all events acting on its behalf. The federation was a "Union."

A contract made between the federation and the manager of the Palace Theatre contained schedules of rates of wages. Briefly it bound the theatre to employ only union men and to pay the wages set forth in the schedule.

"The object of the distribution of the handbills, the judgment states, was clearly to endeavour to lessen the number of persons at-

tending the theatre, and the motive for this was that the theatre had refused to employ union men at the wages stated in the agreement and had employed a non-union man as organist; the organ only being played and no orchestra being engaged. There was some question raised as to whether the theatre was really acting in breach of the contract, but, in my view, that question is not material to the decision of the present case.

"The provision of the Criminal Code, under which these charges were laid, is section 501 reading as follows:—

Everyone is guilty of an offence * * * who, wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful right to do, or to do anything from which he has a lawful right to abstain.

(f) besets or watches the house or other place where such other person resides or works, or carries on business or happens to be."

"This section 501 of the Criminal Code is substantially a copy of section 7 of the English Conspiracy and Protection of Property Act, 1875, chapter 82. Of the several listed acts set out in the section all are acts which are obviously wrongful unless some question can be raised with regard to the one case of besetting or watching, but I think the intention of the section is to put acts of this class in the same category as the others.

"There is good ground for this view apart from the inference to be drawn from this act being listed along with the others, which are obviously wrongful.

"It is set down in 27 *Halsbury title 'Trade and Trade Unions,'* section 1025, page 525:—

It is the general principle of the common-law that a man is entitled to exercise any lawful trade as and where he wills; and the law has always regarded jealously any interference with trade, even at the risk of interference with freedom of contract, as it is public policy to oppose all restraints upon liberty of individual action which are injurious to the interests of the State.

"For this proposition numerous cases are cited.

"In the case of *Sorrell versus Smith*, 1925, A.C. 700 (House of Lords), it was held that a 'combination of two or more persons for the purpose of injuring a man in his trade is unlawful and, if it results in damage to him, is actionable.' As to whether combination or conspiracy is an essential was left undecided.

"The question of lawful authority is clearly a question of defence, that is, a question of showing that something which done without lawful authority is wrongful has in fact, in the particular case been done with lawful authority.

"I think that the evidence shows a besetting and a watching; I think, too, that the

evidence shows that the purpose of the defendants, as representing their employers, was to compel the theatre to abstain from employing non-union musicians and to employ union musicians. Then had the theatre a lawful right to employ non-union musicians or to abstain from employing union musicians?

"As a matter of general law unaffected by contract, the theatre undoubtedly had this right.

"Then did the fact that their contract with the federation oblige them to employ only union men, assuming that to be its effect, take away this lawful right as that expression is intended in this enactment? I think it was never intended that persons who do any of the things listed in section 501 should be entitled to make the rightness or wrongfulness, the lawfulness or unlawfulness, of those acts dependent upon the construction or effect of any contract whatever.

"In *Rex versus Wall* (1907) 21 Cox C.C. 401, the defendants were convicted, though the purpose was to bring about the reinstatement of a dismissed employee. It would be an intolerable thing that in such case the question of the right of the employer to dismiss under his contract of hiring should be admitted as open for consideration on the question of the lawful right of the employer to engage or dismiss whom he chose.

"For similar reasons I think that such a contract cannot constitute lawful authority for committing any of the listed acts. The question of the validity and effect of any such contract is a question to be determined, if necessary, in a civil action between the parties to it.

"In the case of *Sorrell versus Smith*, already referred to, it is true that it was held as stated in the headnote that, if the real purpose of the combination is not to injure another, but to forward or defend the trade of those who enter into it, then no wrong is committed and no action will lie, although damage to another ensues, provided that the purpose is not effected by illegal means.

"On that case I would remark: (1) That it was a civil case; (2) That the proviso, with which the headnote concludes, makes it inapplicable to the case of a wrongful act; (3) That the judgments expressly 'put on one side the law as applied to disputes between employers and workmen and between Trades Unions and others, the law on such questions being regulated to a great extent, by special statutory enactment' (per Lord Dunedin); and (4) That what was there held to be excuse for interference with the plaintiffs' trade was a similar general legal right recognized in the defendants in respect to their trade.

"In the view I have expressed I have dealt with all the questions calling for consideration and the result, in my opinion, is that the conviction was right and consequently that the appeal should be dismissed, with costs.

(*Alberta—Rex ex rel Barron versus Blach-sawl and Rex ex rel Barron versus Hangsjaa*)

Servant may be Dismissed by Master for Incompetence without Notice

The general manager of a lumber milling company was dismissed by the company on the ground that his alleged negligence and incompetence were calculated to injure the business. The company paid into court two months' salary and a further sum of \$37.94 which they admitted had been paid out by the manager on their behalf. The employee brought action against the company to recover the amount of his wages to the end of the year at the rate of \$375 per month, together with damages for wrongful dismissal, and for repayment of \$276 alleged to have been paid out by him for the company. The court found that the dismissal was justified, and denied the plaintiff's claim for wages beyond two months, and also his claim for damages. The defendants, however, were ordered to refund to the plaintiff the amount he had paid out for them, and to pay also the plaintiff's costs in the action, except the costs in the claim for damages.

(*Ontario—Lusignan versus Temagami Timber Company.*)

Loss of Eye is Fully Compensable Though Eye was Defective

An employee of a bridge and iron company at Chicago sustained an accident causing the loss of 90 per cent of the vision of one eye, and received compensation for the injury. On returning to work he met with a second accident by which he entirely lost the sight of the same eye. The employer contended that because only 10 per cent of vision remained when the second accident occurred its liability was limited to a payment for the loss of that fraction of vision. The Supreme Court of Illinois held, on the contrary, that "it is impossible for any human agency to measure the value to an individual of the last ten per cent of vision remaining in his eyes. Whether the defect in vision is caused by disease or accident, or is natural, the reduced amount of vision is all the vision the individual has, and when it is destroyed the use of his eye is destroyed. The legislature has fixed an arbitrary amount to be paid as compensation, and that amount is due whenever a functioning eye is lost."

An Incorporated Company is not Entitled to Exemption from the Lord's Day Act on the Ground of Religious Belief

An incorporated company composed of Jewish shareholders carried on business at Montreal on Sunday, remaining closed from sundown on Friday until sundown on Saturday, this being the Sabbath observance by orthodox Jews. They were summoned by the city police on the charge of contravening the Lord's Day Act (Revised Statutes of Canada, 1906, Chapter 153) which provides in section 5:—

It shall not be lawful for any person on the Lord's Day, except as provided herein, or in any provincial Act or law now or hereafter in force, to sell or offer for sale or purchase any goods, chattels, or other personal property, or any real estate, or to carry on or transact any business of his ordinary calling, or in connection with such calling, or for gain to do, or employ any other person to do, on that day, any work, business, or labour.

The defendants pleaded that they had complied with the intention of the Act by observing the Jewish Sabbath, citing article 4471 of the Revised Statutes of the Province of Quebec 1909 (Lord's Day Act) which reads:—

Notwithstanding anything contained in this section, whosoever conscientiously and habitually observes the seventh day of the week as the Sabbath day and actually abstains from work on that day, shall not be punishable for having worked on the first day of the week, if such work does not disturb other persons in the observance of the first day of the week as a holy day, and if the place where such work is done is not open for trade on that day.

The recorder of Montreal, who tried the case, found that the words "seventh day of the week," as used in the Quebec Statute, meant the period between midnight on Friday and midnight on Saturday, and that as the defendants admitted that they did business before midnight on Saturday they could not claim the benefit of the provision permitting the observance of the seventh day instead of Sunday. He therefore found the defendants guilty and imposed a fine of \$50.

On appeal being taken, the Court of King's Bench at Montreal sustained the judgment of the Recorder, not however on the ground upon which that judgment was based, but because the defendants were a corporation, and as such were not entitled to the benefit of the exception made in favour of individual adherents of the Jewish religion.

—(*Quebec—Rex versus Poyamers, Inc.*)

Municipalities are Subject to Workmen's Compensation Act in Quebec

A night watchman employed by a city corporation to guard a concrete mixer and other material required in the construction of a sidewalk left his post in order to inform the fore-

man that he required more oil for the lanterns. On leaving the foreman's house he slipped on the threshold sustaining a fracture of the thigh. He had lost his foot as the result of a former accident, so that in consequence of the two accidents he was left with a disability amounting to 80 per cent of his earning capacity, and on this basis he claimed \$3,400 from the city corporation under the Workmen's Compensation Act. This claim was denied by the Superior Court at Three Rivers on the ground that the city corporation had no liability under the act, and that even if it had, the claimant had no justification in the present case as the accident did not occur in the course of his regular work for the city. The Court of King's Bench, at Quebec, in appeal, reversed the decision of the lower court, holding that a municipal corporation is subject to the Compensation Act in connection with the work carried on by the city,* and that a workman continues in employment when carrying out an operation arising out of his regular work. The claimant's appeal was allowed, and his claim granted to the extent of \$1,159.80.

—(*Quebec—Ferron versus the City of Shawinigan.*)

Another case involving the question of the liability of a city corporation under the Workmen's Compensation Act of Quebec concerned a workman who sustained injuries to his leg while engaged in city work. The city denied liability on the ground that the workman had failed to comply with the provisions of the Cities and Towns Act, 1922, section 611, requiring that persons claiming damages from a municipality for injuries are not entitled to damages unless they have filed their claims within six months after the date of the accident. The Superior Court at Quebec ruled that this provision did not apply in cases of accidents to men working under a contract of employment with the city.

—(*Quebec—Lemieux versus the Municipality of Lauzon.*)

United States Minimum Wage Laws held Unconstitutional

Some further judgments have been given recently in the question of the constitutionality of the acts passed by various States in the United States providing for the fixing of minimum wages for female employees. These acts had been challenged in consequence of the recent judgment of the Supreme Court of

the United States in holding the minimum wage law of the District of Columbia unconstitutional in its application to adult women.

The Supreme Court of Kansas has now ruled that a State enactment of this type would be void as conflicting with the fourteenth amendment. Congress acts for the District of Columbia with the same limitations as a legislature for a State; and if it could not enact a valid law of this type for the District of Columbia, "the necessary conclusion is the legislature for the State of Kansas possesses no such power."

During October the United States Supreme Court held the Arizona minimum wage law for women unconstitutional in a second test brought before it. The majority opinion was that the District of Columbia law was set aside because it violated the right of contract; that every worker has the "ethical right" to a living wage; and that "in principle there can be no difference between the case of selling labour and the case of selling goods." The court declared that while the physical differences of woman must be recognized in certain cases, and laws regulating hours and working conditions may be upheld, "we cannot accept the doctrine that women of mature age require or may be subjected to restrictions upon their liberty of contract which could not lawfully be imposed in the case of men under similar circumstances."

In dissenting from this opinion, Chief Justice Taft practically charged his colleagues with basing opinions on their economic views. "It is not," he said, "the function of this court to hold congressional acts invalid simply because they are passed to carry out economic views which the court believes to be unwise or unsound."

Injunctions in Labour Disputes

The legislature of Illinois at its late session enacted a law limiting the issue of injunctions in labour disputes. The essential section of the act is as follows:—

No restraining order or injunction shall be granted by any court of this State or by a judge or judges thereof, in any case involving or growing out of a dispute concerning terms or conditions of employment, or enjoining or restraining any person or persons, either singly or in concert, from terminating any relation of employment, or from ceasing to perform any work or labour, or from peaceably and without threats or intimidation, recommending, advising, or persuading others so to do, or from being peaceably and without threats or intimidation upon any public street or thoroughfares or highway for the purpose of obtaining or communicating information or to peaceably and without threats and intimidation, persuade any person or persons to work or to abstain from working, or to employ or to peaceably and without threats or intimidation, cease to employ any party to a labour dispute, or to recommend, advise, or persuade others so to do.

* An amendment was made to the Act in 1920 providing that "whenever a municipal corporation undertakes or executes public works itself, under such conditions as would render a contractor liable under the provisions of this Act, it shall become liable itself."

DEPARTMENT OF LABOUR

CANADA

Minister (Acting)—THE HONOURABLE J. H. KING
Deputy Minister—H. H. WARD

Functions of the Department

Industrial Disputes Investigation Act, 1907.—The administration of the Industrial Disputes Investigation Act, 1907, which provides for the establishment of Boards of Conciliation and Investigation in cases of disputes affecting mines and public utilities.

Conciliation.—The maintenance of a staff of officers at various points whose services are utilized in the adjustment of labour disputes.

Fair Wages.—The administration of Fair Wages policy of the Government of Canada which provides for the observance of the current wages rates and hours of the district on Government contracts and on railway construction towards which financial aid has been voted by Parliament.

Labour Statistics and Information.—The collection, compilation and publication of statistics of wages, hours, prices, cost of living, strikes and lockouts, industrial accidents and industrial agreements; also of labour organization and organization in industry, commerce and the professions; the conduct of investigational and research work bearing on industrial relations and labour conditions; the publication of bulletins of information on these subjects.

Labour Gazette.—The monthly publication of the "Labour Gazette" containing a review of the industrial situation throughout Canada, a record of proceedings under the Industrial Disputes Investigation Act, statistics of wages and hours, wholesale and retail prices in Canada and other countries, strikes and lockouts, industrial accidents, summaries of laws and legal decisions affecting labour and other information on current matters of industrial and labour interest.

Labour Legislation in Canada.—The compilation and publication of reports containing the texts of the labour laws of the Dominion Parliament and of the Provincial Legislatures.

Library.—The maintenance of a library of publications on labour and economic subjects.

Employment Service of Canada.—The administration of the Employment Offices' Co-ordination Act under which, in co-operation with various provincial governments free public employment offices are maintained in 66 centres; statistical information relative to employment conditions is also collected and published.

International Labour Organization (League of Nations).—The collection and transmission of information required by the International Labour Conference and Office; correspondence with Federal and Provincial Government departments and with organizations of employers and employees relative thereto; the representation of Canada at the International Labour Conference and on the Governing Body of the International Labour Office.

Technical Education.—The administration of the Technical Education Act which provides for grants to the provinces for the purpose of promoting technical education; the collection and publication of information in the form of bulletins and otherwise.

Canadian Government Annuities.—The administration of the Government Annuities Act, 1908, whereby provision may be made for old age by the purchase of annuities by individuals, or associations on behalf of their members, or by employers on behalf of their employees.

Combines Investigation Act, 1923.—The administration of the Combines Investigation Act, 1923, which provides means for investigation of alleged combines.

THE LABOUR GAZETTE

*The Official Journal of the Department
of Labour of Canada*

PUBLISHED MONTHLY, in English and French.

SUBSCRIPTION RATES—Canada, United States, and Mexico, 20 cents per annum, postage prepaid; all other countries \$1.00 per annum, postage prepaid. All subscriptions payable in advance. Single copies 3 cents each.

CHANGE OF ADDRESS—When a change of address is ordered both the new and the old address must be given. The notice should be sent to the Circulation Manager, Department of Labour, Ottawa.

BOUND VOLUMES—Bound volumes of the Labour Gazette, containing the monthly issues for the year 1924, are available at \$2.00 per copy. Bound volumes for earlier years are also obtainable.

HOW TO REMIT—Remittances should be sent by Postal Note or Money-Order, payable to the order of the Labour Gazette. Cash should be sent in Registered Letter. Remittances must not be made in postage stamps.

LETTERS should be sent to The Editor if in reference to the subject matter of the publication, and to the Circulation Manager if in reference to subscription, the address in each case being the Labour Gazette, The Department of Labour, Ottawa. Such communications, if addressed in care of the Deputy Minister may be sent post free from any part of the Dominion.

DECEMBER, 1925

[NUMBER 12

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A MARKED decline, due to seasonal causes, was noted in the level of employment in Canada at the beginning of November, as compared with the previous month, but the general situation was considerably better than at the same date last year. The Employment Service of Canada reported a decrease in the number of placements in regular or casual employment during October, the demand for harvest workers in the Prairie Provinces having slackened from the high level of the previous month. Vacancies and placements, however, were considerably above the corresponding figure for October, 1924. At the beginning of November the percentage of unemployment among members of trade unions was 5.1 as compared with percentages of 5.7 at the beginning of October and with 6.6 at the beginning of November, 1924. This figure is based upon reports received from 1,503 local trade unions, with 146,559 members. Reports received by the Dominion Bureau of Statistics from 5,876 employers in industries other than fishing and agriculture showed that they were employing 797,790 workpeople on November 1, as compared with 807,371 workpeople on October 1. The employment index number, based on the numbers employed in the same industries in January, 1920, as 100, stood 97.1 on November 1, as compared with 98.3 on October 1, and with 90.2 on November 1, 1924.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.23 at the beginning of November as compared with \$10.89 for October; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 advanced to 161.1 for November as compared with 156.6 for October; 157.7 for November, 1924; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.5 for Novem-

ber, 1920; and 256.7 for May, 1920 (the peak).

The time loss caused by industrial disputes in November was greater than in the previous month or in November, 1924. Nine disputes were in progress at some time during the month, involving 3,594 employees and causing a loss in working time of 34,832 days. Corresponding figures for October were as follows:—eleven disputes, 732 workpeople, and 12,533 working days; and for November, 1924, three disputes, 353 workpeople, and 5,148 working days.

Apprenticeship in the building industry

On another page of this issue will be found the report of a joint committee of employers and employees in the building industry at Vancouver, containing the terms of an agreement that has been reached for the establishment of an apprenticeship system for carpenters. The report is in line with the recommendations of the Joint Conference of the Building and Construction Industries in Canada, held at Ottawa in May, 1921. The report of the Joint Conference was published as a supplement to the *LABOUR GAZETTE* for May, 1921, and contained the scheme of a National Apprenticeship Council, with local Apprenticeship Councils in various localities, the functions of the National Council to be advisory except in respect to matters referred to it for decision. The Joint Conference also laid down certain rules and regulations which should govern such Councils, and published a standard form of apprenticeship, prescribing in general terms the relations which should exist between apprentice, guardian, employer, and local council, the details of such indentures to be fixed by local councils. The National Conference was convened on invitation of the Government of Canada, in accordance with a request received from the National Joint Conference Board of the Building and Construction Industries in Canada. Thirty-two delegates were in attendance on behalf of the employers, selected by the Canadian Association of Building and Construction Industries, and an equal number of delegates

on behalf of the employees, selected by the labour organizations in the building trades which are represented on the National Joint Conference Board. Unanimous resolutions based on committee reports were adopted by the Conference on all of the five items of the agenda, relating respectively to (1) existing conditions in the industry; (2) apprenticeship and craftsmanship; (3) costs and production; (4) conditions of employment; (5) development of Joint Industrial Councils.

The apprenticeship system now adopted for carpenters in Vancouver follows the lines that were laid down by the Joint Conference in 1921, in so far as the plans of the latter body were applicable to local councils. If the example of Vancouver is followed by the employers and employees in other important centres of the building industry throughout Canada, it is possible that full effect may yet be given to the proposals of the National Joint Conference.

Industrial Disputes Act in British Columbia

An Act has been passed by the Legislature of British Columbia making the provisions of the Federal Industrial Disputes Investigation Act applicable to industrial disputes otherwise within the exclusive legislative authority of the province. The Dominion Act was amended at the last session of Parliament as the result of a judgment of the Judicial Committee of the Privy Council. This judgment declared the statute to be *ultra vires* of Parliament in regard to certain sections which dealt with matters coming properly within provincial jurisdiction. The amendment of the last session declared that such matters might be dealt with under the federal statute provided legislation to this effect was passed by the province concerned.

The new British Columbia Act accordingly declares that the provisions of the Dominion Industrial Disputes Investigation Act are to apply to disputes which would otherwise be subject to the exclusive jurisdiction of the province.

In Saskatchewan a bill containing similar provisions was introduced on December 11, during the present session of the Provincial legislature.

Advisory Employment Council in Alberta

The Hon. Alexander Ross, Minister of Labour of Alberta, proposes to revive the advisory council which is provided for by the Alberta Government Employment Bureau Act (Revised Statutes of Alberta, 1922, Chapter 179). The Act provides

that "The Lieutenant-Governor in Council may appoint an advisory council representative of employers and employees, whose duty it shall be to advise the Minister in directing the policy of the Bureau," and may "divide the Province into such employment districts as may be deemed advisable; and establish an employment office in each and appoint officials and staff to manage same, and may appoint an advisory committee representative of employees and employers, to assist the official in charge in the discharge of his duties and in co-operating with the advisory council in the work of applying the national employment policy to the industries of the province."

An advisory council was established soon after the Act was passed in 1919, but was discontinued later. A number of organizations in the province recently suggested that they should be revived, and the Minister has been in communication with various Trades and Labour Councils, Boards of Trade, War Veterans' Associations and Farmers' organizations, in order to secure representatives from these bodies to act on the proposed council. Mr. Ross states that the objects of the advisory council, will be: (1) To secure the co-operation of employer and employees in the use of the employment service; (2) to give consideration to the question of providing suitable work for handicapped workmen; (3) to make recommendations to the minister which, in the opinion of the council, will promote efficiency in the employment service; (4) to investigate complaints and report thereon.

The Minister pays a tribute to the increased efficiency of the Employment Service in recent years. Placements have increased by 54 per cent over a period of a few years, while the cost of administration has decreased 41 per cent.

The Employment Bureau Act of Manitoba also provides for the appointment, by order in council, of an advisory board of five members serving without remuneration, one member to be selected from each of the following bodies:—The Trades and Labour Council; the Organized Farmers and the employers of non-agricultural labour; and the fourth member to be the secretary of the Provincial Bureau of Labour. No order in council, however, has yet been issued for the establishment of such a board.

Dominion Board of Trade organized

A Board of Trade for Canada was established by a "National Economic Conference" of Boards of Trade, held at Winnipeg in November. Details of the organization of the first Dominion Board are being arranged by

a committee composed of representatives of the Boards of Trade of London (Ontario), Hamilton (Ontario), Montreal (Quebec), and Toronto (Ontario). In the meantime the new Board will function through the agency of the Ottawa Board of Trade. It is proposed to divide the Dominion into three regions, the maritime, central and western divisions, and when a suitable basis of representation has been adopted the Board will hold a meeting for the purpose of electing officers and appointing a permanent staff.

The Dominion Board will perform functions similar to those of the United States Chamber of Commerce. It will reflect the views of the various Boards of Trade throughout Canada, and take the necessary measures to bring the proposals of the members before the Government. Mr. A. O. Dawson, president of the Montreal Chamber of Commerce, suggested after the conference that "some of the questions that our Dominion Board of Trade could consider and pronounce upon embrace tariff, taxation, trust legislation, merchant marine, railway legislation, national budget, industrial relations, unemployment, and many other matters of paramount importance." In the course of time, Mr. Dawson continued, "it would be expected that the Board would organize a research department which would give attention to the needs of the businessman, watch the passage of all bills submitted to Parliament, and keep the members of the various boards posted on the progress of matters before Parliament. An educational service bureau would be established, which would take an active interest in the development of individual efficiency, school systems, teacher training, health and physical education, educational laws and their administration. Housing and city planning would be given attention, departments formed to deal with problems of immigration, domestic distribution, natural resources and a large number of other matters coming within the sphere of national concern."

Disabled veterans and unemployment

The Department of Soldiers' Civil Re-establishment announced during November a modification in the existing regulation governing the payment of relief to disabled veterans in distressed circumstances. Such relief was previously given to all veterans so situated, irrespective of their degree of disability. The new regulation limited the granting of relief to veterans who are under a disability of at least 20 per cent. After this change was announced many protests were received by the Department, especially from municipal bodies and soldiers' organi-

zations, and the Minister of Soldiers' Civil Re-establishment after consultation with the officials of his Department, announced in December that instructions would be sent out to the effect that any pensioner who, after investigation, is found to be unable to engage in employment because of his pensionable disability, would be granted unemployment relief. This, it is hoped, will relieve all cases of hardship. In addition to this, the Minister directed that all returned men entitled to pay and allowances were to receive the same on December 22 instead of January 1. This was done with a view to affording pecuniary assistance before the holidays.

University Courses for civil servants

During the past year the Professional Institute of the Civil Service of Canada has been considering the possibility of arranging for the provision of graduate and post-graduate university courses for the benefit of employees of the Dominion Government. Promises of co-operation in this work have already been received from McGill University, Montreal, Toronto University, and Queen's University, Kingston. The Dominion Government is to be asked to support this movement for university extension courses, which it is believed would increase the efficiency of the civil service. The proposed courses would include arts, as well as engineering and other technical subjects, and the training would be provided at minimum cost to civil servants. The method of instruction would be either by summer courses at a university, or by post-graduate teaching conducted by correspondence or with minimum requirements as to attendance at the university. A census is to be taken by the Professional Institute to ascertain the number of civil servants who would avail themselves of the privilege of university courses.

Proposed reforms in school system

The survey of the school system of British Columbia, noted on another page of this issue, was undertaken last year by the Provincial Department of Education at the suggestion of the British Columbia Federation of Teachers. The movement begun by the teachers in 1922 was strongly supported by the Provincial Trustees' Association, the Parent Teacher Federation, and other bodies. The Teachers' Federation later undertook a comprehensive study of the educational system of British Columbia with a view to lending concrete assistance to the Commissioners in the discharge of their duties. Committees were appointed to investigate specific problems under the direction of

a central executive, which crystallized the conclusions submitted in the form of a report to the Commission. Systematic action of a similar nature was also undertaken by the other organizations mentioned, and the Commission gratefully records its appreciation of the many helpful suggestions and constructive criticisms offered for its consideration.

The Report of the Commissioners gives the results of an exhaustive study of the whole field of education in British Columbia and contains information and suggestions which should be equally serviceable in the other Provinces of Canada. The Commissioners note a lack of definite aim in the existing educational system. The aim or direction of education should, they believe, be determined by the social and industrial opportunities that are open to the pupils in the several provinces. For this reason an educational survey is not complete without an industrial, social, economic and occupational survey.

"Up to the present," the report states, "our secondary schools have given pre-vocational training to favoured classes—those planning to enter the so-called learned professions, including those connected with applied science. In proof of this you may go into any high school in Canada and question the graduating classes. Out of any number of pupils you will find not less than ninety per cent of boys and perhaps more than fifty per cent of girls who are ready to tell you that they are to teach, take law or medicine or engineering or banking or nursing. They are definitely started on a career and are taking the work that is basic for that career. We have now reached a stage where the secondary school, if it is to realize its social aims, must broaden its programme of pre-vocational training. So far it has been a class-institution with a mathematical and literary bias. As an instrument of general and popular social worth it must offer a pre-vocational programme for all young people whose natural ability and command of leisure from fifteen to eighteen years make attendance possible."

The Commissioners consider that it would be highly desirable that statistical data should be collected by a Canadian bureau, acting in an advisory capacity, if such a bureau could be established by private foundation. There is a real need, for instance, for the ascertaining of Canadian "norms" in the field of standardized tests; to collect, evaluate, and organize the results of the various studies made along experimental lines in education; to institute a depository of educational information and studies which should be available to students of education or to other interested citizens.

Railways co-operate in immigration

On November 15 effect was given to an agreement made on September 1 between the Department of Immigration and Colonization and the two railway systems of Canada, its purpose being to encourage the movement into Canada of men and women of the agricultural and domestic classes in certain European countries, namely, Germany, Poland, Czechoslovakia, Jugo-Slavia, Hungary, Austria, Roumania, Russia, Lithuania, Latvia and Esthonia. The Department, while retaining full control of this class of emigration, will avail itself of the services of agents of the railway organizations to determine at the point of origin the fitness of the prospective emigrants for farm and home work in Canada. This arrangement will remove the causes of frequent delays in the admission of desirable settlers, and ensure that they will be placed in positions soon after their arrival.

The railways have appointed accredited agents to represent them in the countries to which the agreement applies. These agents will issue certificates of occupation to approved emigrants, without charge, each certificate being also a guarantee of employment. The certificates will be carried by the emigrants and presented to the examining officers of the Department of Immigration at the ports of embarkation, where they will be collected when the passport *visa* is given.

Unemployment insurance and emigration

The British Secretary of State for Dominion Affairs has appointed an inter-departmental Committee to consider how far the existing provision for old age pensions and for national health and unemployment insurance tends to discourage migration from this country with a view to settlement in the Empire overseas, and how far any such tendency will be accentuated by the Widows', Orphans', and Old Age Contributory Pensions Act, 1925, and in what manner any adverse effect resulting from such legislation can best be counteracted.

The *Ministry of Labour Gazette* for November estimates the number of insured persons in Great Britain at the beginning of July, 1925, as approximately 11,626,000, including all persons who were insured against unemployment and were either in insured employment (including those temporarily away through sickness or recognized holidays), or were included within certain categories of insured workers whose unemployment books were lodged at Employment Exchanges.

Workmen's compensation in Quebec

The Minister of Public Works and Labour of the Province of Quebec stated in a recent interview that important labour legislation would be brought forward at the session of the Provincial Legislature which will open on January 7. Foremost among the proposed measures will be an act amending the Workmen's Compensation Act on the lines of the report of the special commission on this subject. The report of this commission was outlined in the February issue of the *LABOUR GAZETTE*. The minister was not in a position to state whether or not the government contemplated the establishment of a Workmen's Compensation Board, as desired by the labour representatives on the commission, or would propose to continue the existing system under which the claims of injured workmen for compensation or indemnities are referred to the civil courts. It is stated that the proposed amending act will enlarge the classes of workmen covered by the provisions of the Workmen's Compensation Act, and increase the amount of the indemnities fixed by the existing scale of compensation. The cost of medical care will also be included among the benefits allowed as compensation for injuries.

Encouragement for small logging operations

By a recent Order in Council issued by the Dominion Government on the recommendation of the Minister of the Interior an important amendment was made in the existing regulations governing licenses for logging operations in the western provinces. The amendment permits the granting of "permit berths" at public auction for isolated tracts of timber under 160 acres in extent. Formerly persons wishing to cut timber were obliged to invest large sums of money in order to avail themselves of the privileges carried by the licenses under which they were required to operate. It is anticipated that the new rules will benefit settlers who are looking for employment during the winter months, and will result in a large increase in hand logging operations during the present winter. The regulations apply to Dominion lands in Manitoba, Saskatchewan, Alberta, the railway belt in British Columbia, and the tract of three and a half million acres controlled by the Government of the Dominion in the Peace River District in British Columbia. The amendment will be of particular benefit to the latter province, and meets the wishes of the Kamloops Board of Trade and other local organizations interested in logging operations.

The amended regulations provide that before a berth is offered for sale it shall be cruised by an official of the Department of the Interior in order to ascertain the quantity and quality of the timber, the time required for advertising the sale being 15 days, or 30 days if the quantity exceeds three million feet board measure. The rates of Dominion dues differ in the territories of the various agencies. The tenure of a berth is one year, with the privilege of renewal up to five years.

Closing hours of stores in Montreal

The Committee of the Montreal City Council who had been studying a proposal to repeal the Early Closing By-law, are reported to have decided at their final meeting to recommend the Council to retain the by-law in its present form. Another report by the same Committee describing the practice in various cities in Canada in regard to hours of closing of stores, was outlined in the *LABOUR GAZETTE* for October. The by-law in question provides that stores in the City of Montreal shall be closed at 7 p.m. on Monday, Tuesday, Wednesday and Thursday of each week, at 9 p.m. on Friday and at 11 p.m. on Saturday. Tailors, merchant tailors, milliners and women dealing in novelties and needlework, are allowed to keep open their shops until 9 p.m. on Monday provided that the services of no employee are retained between 7 p.m. and 9 p.m. The proposed repeal of the by-law was strongly opposed by the Retail Employees' Association.

Benefits of winter painting

The National Painters' and Decorators' Joint Council of Great Britain published in November an appeal to the public to change the existing practice of postponing all interior decorative work until spring. "At this period of the year," they say, "there is invariably distress in the painting trade, and at the present time there are approximately ten thousand painters unemployed. This state of affairs arises solely from the habit which the public has acquired, of putting in hand decorative work at one time of the year only. When spring arrives, there will be acute competition for the services of painters who are now walking the streets solely because of a habit of mind on the part of the average house-wife. There is no sound reason why painting work cannot be done in the winter months. We submit that there are many very good reasons why it should, among them the following: (a) The householder who puts work in hand in the slack season gets the

best men, and hence the west work. (b) The master decorator has time to give individual attention and supervision, which is not possible during the "rush" season. (c) The state of business must inevitably have an effect upon estimates to the advantage of the householder who places work in the winter."

Minimum wages in the United States

Considerable interest attaches to new Minimum Wage legislation in Wisconsin, intended to meet the situation created

throughout the United States by the decision of the United States Supreme Court in 1923, which declared unconstitutional the minimum wage law in the District of Columbia. The result of the decision has been to nullify the minimum wage legislation in certain States in which it was challenged, in so far as such legislation affects adult employees (LABOUR GAZETTE, November, 1925, and previous issues). The State legislatures, under the decision, may continue to regulate the wages and hours of minors, who are considered to be wards of the several States.

So far the situation created by the Supreme Court's decision has been dealt with only in the State of Wisconsin, which has passed an act designed to make minimum wage legislation still effective. This is done, firstly, by continuing the operation of the existing law in so far as it affects minors, and, secondly, by adding the following section:

"No wage paid or agreed to be paid by any employer to any adult female employee shall be oppressive. Any wage lower than a reasonable and adequate compensation for the services rendered shall be deemed oppressive and is hereby prohibited."

The Wisconsin Industrial Commission is to enforce this general prohibition by determining what constitutes oppressive and unjust wages within the meaning of the section, and by issuing orders accordingly.

Employers' associations for accident prevention

The pulp and paper manufacturers of Ontario have recently formed an Employers' Committee, under section 102 of the Workmen's Compensation Act of

the Province, this being the only committee of the kind that has been formed during the ten years that the act has been in force. The Act permits the employers in any of the classes included in "Schedule I" to form themselves into an association for accident prevention, the rules made by a representative association to be binding on all employers in the class. Section 102 of the act is as follows:—

102. (1) The employers in any of the classes for the time being included in Schedule 1 may appoint a committee of themselves, consisting of not more than five employers, to watch over their interests in matters to which this part relates.

(2) Where a claim is for compensation for an injury for which the employers in any such class would be liable, if the Board is of the opinion that the committee sufficiently represents such employers, and the committee certifies to the Board that it is satisfied that the claim should be allowed, the Board may act on the certificate and may also act upon the certificate of the committee as to the proper sum to be awarded for compensation if the workman or dependent is satisfied with the sum named in the certificate.

(3) The committee may be the medium of communication on the part of the class with the Board.

An employers' committee for the pulp and paper industry composed of five members was formed last April, when the manufacturers held a meeting at Toronto, followed by subsequent meetings in May, June and September. The *Pulp and Paper Magazine* states that the new committee will work in the closest co-operation with the Ontario Pulp and Paper Makers' Safety Association, whose function is the successful carrying out of accident prevention policies, and its objective will be the reduction of the cost of compensation by the elimination of accidents. Letters have been sent to all companies in the industry outlining the aims of the Committee and requesting the full support of all companies in the effort to reduce accidents in pulp and paper mills. Encouraging responses have been received in reply to this letter, and it is hoped that by the hearty co-operation of all concerned a yearly saving of \$200,000 in reduced compensation assessments will be effected.

The Compensation Acts of Nova Scotia and New Brunswick also recognize employers' associations for accident prevention, provided that the Board is satisfied that they are representative of the industry in the class represented, and the rules made by such associations, when approved by the Board, are held to be binding on all employers in the class concerned. The Nova Scotia Accident Prevention Association, which was formed under the provisions of the Provincial Act enables the employers to discuss not only the best means for the prevention of accidents, but also to consider all matters directly affecting them in connection with the general administration of the act. The *Industrial Safety News*, the official organ of the Association, in a recent issue said: "Since our Association came into being, we have been in almost constant touch with the Administrative Board and have been successful in ironing out many difficulties and misunderstandings. Of course, it was not to be expected that we could always see eye to eye with it, and therefore a number of matters have yet to be dealt with to our entire satisfaction."

Social legislation in Australia

An outline of legislation for the present session of the Australian Commonwealth Parliament was given by the Governor General in his

opening speech as follows:—

"Steps have been taken to re-organize the Institute of Science and Industry, in order to secure complete co-operation with the States and to enable the Bureau effectively to carry out investigations and research.

"A Bill will be submitted for the purpose of diminishing conflicts between federal and state jurisdiction, to secure observance of awards of the Court and to increase the efficiency of the machinery for the settlement of industrial disputes.

"The first reports of the Royal Commission on National Insurance, dealing with casual sickness, permanent invalidity, maternity and old age, have been received. The recommendations of the Commission will be considered in connection with the subsequent reports dealing with unemployment and other phases of these problems with a view to legislation. Proposals will be submitted for safeguarding effectively the health of the people."

Alberta has the distinction of being the first province in Canada to establish a research council, with laboratories and a staff under its own control. The present members of the council are: Chairman, H. Greenfield, premier of the province; Dr. H. M. Tory, Professor J. A. Allan, J. T. Stirling, Professor N. C. Pitcher, Dean R. W. Boyle, and Professor Edgar Stansfield, honorary secretary. The two main problems under study have been coal and road materials. Much work has already been accomplished in the determination and correlation of coal seams. Some 700 samples have been received since the formation of the council, but only the last 500 of these have been analyzed in the council's laboratories.

Every employee on the pay-roll of the Peninsular and Oriental Steam Navigation Company and associated companies is invited in a circular to invest his or her savings in the companies. The scheme has been drawn up by Lord Inchcape, the chairman of the companies. The directors state that deposits should be made in sums of £10 or multiples of £10. The deposits will bear interest at 5 per cent per annum, together with an additional 2 per cent when the dividend paid by the Peninsular and Oriental Company on its deferred stock is 5 per cent per annum or over, or 2½ per cent when the dividend is 10 per cent or over.

The Secretary of State for the Dominions announced recently in the British House of Commons that an inter-department committee has been named to consider old age pensions, health and unemployment insurance in their relation to emigration. This committee is to study a proposal by the Trade Union Congress for the payment of old age pensions to prospective settlers leaving Great Britain to join their families in overseas Dominions.

The Canadian Pacific Railway Company offers to apprentices and other employees enrolled on the permanent staff of the company and under 21 years of age, and to minor sons of employees, subject to competitive examination, three free scholarships, covering four years' tuition in architecture, chemical, civil, mechanical or electrical engineering at McGill University.

The competitive examination is the same as the regular entrance matriculation examination for McGill University, held at Montreal and at other centres throughout Canada in June of each year.

The Ontario Workmen's Compensation Board awarded during the month of November \$469,162.91 in benefits, \$404,011.06 of this being compensation and \$65,151.85 medical aid. The accidents reported during the month numbered 5,062, of which 33 were fatal, as compared with 5,761 during October, of which 40 were fatal. The year 1925 shows an increase of 656 over the year 1924 in number of accidents reported to date; the figures for the eleven months of 1925 being 54,805, as compared with 54,149 during the same period last year. The number of death cases, however, have decreased from 361 in 1924 to 317 in 1925. The benefits awarded during the eleven months of 1925 totalled \$5,061,399.65, as compared with \$5,672,216.60 during the same period of 1924.

Under the terms of a proposed agreement between the City of Hamilton and the Hamilton Street Railway Company, to become effective on January 2, 1926, subject to ratification by a vote of the municipal electors in December, the regulation contained in the existing agreement that there shall be not less than two men in charge of each car is declared to be no longer binding on the company, and the company may operate such numbers of cars operated by one employee as may be suitable to the system.

The St. John Board of Trade is considering a proposal for the formation of an industrial advisory board for the Province of New Brunswick.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THERE was a seasonal decline in employment in industries other than agriculture and fishing at the beginning of November, but the situation was better than at the same time last year, although the curtailment then, owing to the finer weather, was somewhat less extensive.

The employment situation as reported by the local superintendents of the Employment Service of Canada at the end of November was as follows:—

In Nova Scotia farm demands for workers were very small as the season's work was practically complete. Inclement weather was seriously interfering with fishing operations. Although the prospects for the logging industry were good, and although a fair demand for men was reported, this industry had not increased as yet to its maximum. The coal mining industry was good, with a fair production, and nearly full time was being worked. The iron and steel industries were favourable. Manufacturing in seasonal lines was good. Construction activity was at a low ebb. Carriers reported freight as heavy.

As in Nova Scotia, the fishing industry in New Brunswick was being hindered by stormy weather. A lack of snow had been holding up the operations in the woods for some little time, but with a fair demand for men and with prospects of a considerable increase in this demand as soon as the weather was more seasonable, the outlook was rather bright. Manufacturing in lumber and allied lines, as well as in seasonal lines, was favourable. Other factories were working normal time for the most part. Construction was inactive. The opening of the winter port season at St. John served to increase business at that centre.

From the province of Quebec reports indicated that the seasonal trends in employment were scarcely different this year from preceding years. Agriculture was quiet, while lumbering, which had been increasing in momentum during the month of November, slackened in its demands for workers towards the end of the month; building construction, taking into consideration the time of the year, was busy. In manufacturing lines in the city of Montreal, the boot and shoe industry was practically the only one reported as quiet. From the city of Quebec, while the fur and clothing industries were busy, an industrial dispute was seriously interfering with the leather trades. An improvement, due to the approaching holiday business, was reported by the trade group. Orders for domestic workers continued to be numerous, exceeding

the supply. Generally speaking, conditions in this province were favourable.

While fairly consistent demands for winter farm hands were being received at each of the employment offices in Ontario, the vacancies would not appear to be in such numbers that filling them constituted any problem. Although some of the larger centres reported that considerable construction work would proceed during the winter period, this industry, generally speaking, was experiencing the usual rapid seasonal decline. Logging, reported as not so busy as during the preceding year, was still absorbing a number of workers. The manufacturing industries appeared to be satisfactorily maintaining their levels of production, and consequently showed little change in employment. Generally speaking, conditions in the southern part of this province, where manufacturing predominates, were satisfactory for the season, and while unemployment was increasing to some extent, it was not doing so at a rate which appeared alarming. In the northern part of the province, however, while the mining industry was satisfactory, conditions generally were not any too favourable, due in no small measure to less than the usual activity in logging.

Manitoba superintendents reported that there were not a great many calls for winter farm workers, while practically no shortage of applicants, willing to accept the jobs, existed. In the logging industry a somewhat similar experience to that of the Maritime Provinces had been encountered, namely, that bush work was being held up by reason of their being little, or no snow. It was reported from Winnipeg that practically no construction work was in progress. The demands for women domestic workers continued to be rather heavy.

Some belated threshing was being finished up in Saskatchewan. For winter farm hands the demands were only fair, and plenty of applicants, anxious to take the work, were registering at practically every point. The construction industry was quiet. Some small demands for bush workers were being received at different offices. Domestic workers were scarce in some places, although the demands were not heavy. The numbers of unplaced applicants reported from the employment offices in different centres showed somewhat substantial increases.

As in Manitoba and Saskatchewan, the demands for winter farm help in Alberta were fair, but applicants willing to take the work were quite sufficient. Taking into considera-

tion the lateness of the season, the construction industry was continuing to give considerable employment. The demands for workers for logging, which had been anticipated, were rather slow in coming in. Work in and around the coal mines was fair, and some extra workers were being employed, although a surplus of this class of labour existed at some points. Generally speaking, the employment situation reflected the usual seasonal tendency—placements decreasing while applicants were increasing.

In British Columbia logging and lumber-

ing industries were rather dull, and hence not many workers were being sought for the different operations in these lines. In this province metal mining has been rather active and few skilled men are unemployed. Manufacturing was fair in most centres, but not many men were being taken on, although quite a number were looking for work in this industry. Though unemployment among residents of the province had not attained serious proportions, the usual winter phenomenon of many transients seeking work at each of the employment offices was again in evidence.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

EMPLOYERS'
REPORTS.

Employment on November 1 showed a seasonal decline that was rather greater than the loss reported on the same date of 1924. The index number, however, continued to be higher than in the corresponding month of last year. All provinces shared in the downward movement, but Quebec showed the greatest absolute reduction. In the Maritime Provinces there were considerable seasonal decreases in sawmills, supplementing moderate curtailment in transportation and railway construction. On the other hand, rolling mills, trade and highway construction were more active. In Quebec employment was lower in lumber mills and some other branches of manufacturing and also in construction. Logging camps, trade and shipping, however, recorded improvement. In Ontario heavy seasonal losses in lumber and canning factories and in construction were partly offset by large increases in logging, trade, steam railway operation and textile works. In the Prairie Provinces manufacturing, construction, services and railway operation registered curtailment, but logging, mining and trade were decidedly busier. In British Columbia, there were declines in canneries, lumber mills, tin can factories, highway and railway construction, while the only pronounced gains were in logging.

Of the eight cities for which separate tabulations are made, only two—Montreal and Winnipeg—registered increases, in Toronto the situation was unchanged, and in Quebec, Ottawa, Hamilton, Windsor and other Border cities and Vancouver there was curtailment. In Montreal, employment showed a further though slight gain, on account of improvement in shipping and trade, but there were large declines in manufacturing and construction. In Quebec, manufacturing and transportation were slack, while building made rather small increases. In Toronto, there was no change in the general situation; trade was decidedly more active, construction was seasonally dull and manufactures remained stationary. In Ottawa, lumber mills, construction and hotels afforded less employment, but trade showed improvement. In Hamilton, construction registered a moderate, seasonal contraction, while little change on the whole took place in other groups. In Windsor and the other Border cities, iron and steel and stone works afforded less employment. In Winnipeg, manufacturing and trade were decidedly busier. In Vancouver, there were seasonal losses in lumber, canning and tin can factories, while shipping and construction were slightly more active.

There were pronounced seasonal contractions in lumber mills and canneries; rubber,

iron and steel works also reported moderately large declines. On the other hand, textile and some other factories were much more fully employed. Logging camps provided work for many more men than in the preceding month. Coal and metallic ore mining showed improvement, but in quarries there were reductions. Communications were quieter. Shipping and stevedoring was much more active, but other branches of transportation reported a smaller personnel. Construction registered further seasonal losses, as did also, the service group, hotels releasing a considerable number of workers. Trade reported important improvement.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of November.

TRADE UNION
REPORTS

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades or who are idle because of illness or as a direct result of strikes or lock-outs are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Statements tabulated from 1,503 local trade unions representing 146,559 members indicated slight improvement at the end of October, the percentage of idleness standing at 5.1 at the end of the month as compared with percentages of 5.7 at the close of the previous month and 6.8 on October 31, 1924. Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia unions were better employed than in September, and in the remaining provinces there were slight contractions. In comparison with the returns for October last year, improvement was indicated in all provinces except Nova Scotia and Quebec. Unions in the manufacturing division reported a smaller percentage of idleness than in the preceding month, the garment trades especially being busier. Tradesmen in the iron and steel, printing, textile, hat and cap, glass, and cigar and tobacco groups also registered a better situation. Metal polishers and wood workers on the other hand, were somewhat slack. In the Nova Scotia coal mines employment increased, but in Alberta there was less activity and the British Columbia situation remained unchanged. Asbestos miners in Quebec and quarry workers in Nova Scotia were fully engaged. In the building trades slightly more unemployment was registered than in September.

ber as was shown by returns tabulated from 156 unions, with an aggregate membership of 11,621 persons. Of these 1,319 or a percentage of 11.4 were unemployed as compared with percentages of 10.5 in September and 13.1 in October last year. The situation among steam shovel and dredgemen, bridge and structural iron workers, granite and stonecutters, painters, decorators and paperhangers, tile layers, lathers and roofers, and hod carriers was more favourable than in the previous month, and in the remaining trades employment declined somewhat. A slightly larger percentage of idleness was registered in the transportation group. The steam railways and navigation trades reported less activity but practically no change occurred in the street railway division. Fishermen were slacker than in September, while lumber workers and loggers registered no unemployment. Hotel and restaurant employees, barbers and stationary engineers and firemen were not as actively engaged as in September, but the situation for theatre and stage employees showed some improvement.

EMPLOYMENT 1925, the offices of the Employment Service of Canada referred 40,811 workers to positions and effected a total of 39,379 placements. Of these the placements in regular employment were 23,322 of which 24,677 were of men and 3,645 of women. The placements in casual work numbered 11,057. Employers notified the service of 42,230 vacancies of which 32,527 were for men and 9,703 for women. Applications for work were received at the offices from 39,040 men and 11,172 women, a total of 50,212. A marked decline is noted in the volume of business transacted when the above figures are compared with those of the preceding month, but a substantial increase is shown in the records when compared with those of October last year. The reports for September, 1925, showing 75,312 vacancies offered, 77,436 applications made and 68,637 placements effected, while in October, 1924, there were recorded 40,310 vacancies, 50,982 applications for work and 37,008 placements in regular and casual employment. A report in detail of the work of the offices for the month of October, 1925, may be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES Some figures indicating the movement of trade and industry in November and in previous months are given in the table on page 1169.

The Dominion Bureau of Statistics reports that the production of pig iron in Canada in

October was 74,013 tons in October, more than double the 34,609 tons of September, and marked the maximum output in any month since May, 1924. The increase, while general in all grades, was principally in basic pig iron which rose 140 per cent to 61,379 tons as compared with 25,579 tons in the preceding month. Foundry iron rose slightly to 9,381 tons from 9,030 tons. There was also a production of 3,253 tons of malleable iron whereas none of this grade was reported in September. Of the total output, 84 per cent was made for the further use of the reporting firms and the balance, or 16 per cent, was intended for sale. Ontario produced 65 per cent of the tonnage and the remainder or 35 per cent was made in Nova Scotia. For the ten months ending October, the cumulative production was 446,973 tons or 18 per cent under 547,486 tons made during the same ten months of last year. This year's output to date consisted of 344,809 tons of basic pig iron, 74,420 tons of foundry iron and 27,744 tons of malleable iron. Furnace charges in October consisted of 120,100 long tons of imported iron ore, 84,977 short tons of coke and 45,846 short tons of limestone. For each long ton of pig iron made the furnace charges were 3,635 pounds of imported iron ore, 2,296 pounds of coke and 1,239 pounds of limestone. During the month two additional furnaces were blown in, one at Hamilton, Ont., and one at Sydney, N.S., resulting in seven furnaces being in blast on October 31. The active furnaces having a daily capacity of 2,675 long tons or about 53 per cent of the total capacity of all blast furnaces in Canada were located: 3 at Sydney, N.S., 2 at Hamilton, Ont., and 2 at Sault Ste. Marie, Ont. Ferro-alloys at 2,041 tons showed little change from the 2,046 tons of October and consisted mostly of the grade having a high manganese content. Small quantities of ferro-silicon were also produced to make the total output of 20,607 tons of ferro-alloys for the ten months ending October.

Steel ingots and castings in Canada at 108,868 tons in October reflected the higher output of pig iron by almost trebling the September production of 37,094 tons. This increase in tonnage was accounted for by the greater quantity of steel ingots made for the further use of the producers, which amounted to 107,195 tons marking an advance of 199 per cent over 35,833 tons of the preceding month. Direct steel castings at 1,673 tons showed a total slightly above the 1,261 tons of September. For the ten months ending October, the total steel production was 617,137 tons, an increase of 3 per cent over the 601,707 tons reported for the same period of last year. Although steel castings at 15,476 tons showed

a drop from the 24,163 tons of 1924, the loss was more than offset by steel ingots advancing to 601,661 tons as against 577,544 tons for the same ten months of a year ago.

Pig iron prices were unchanged in October, No. 1 foundry at Toronto still being quoted at \$25.35 and No. 2 foundry at \$24.85 per ton. The Montreal price for both grades was again \$27.25. Basic pig iron at mill remained at \$21. The Bureau's index number for Iron and Its Products (1913 prices=100) fell from 149.9 to 148.8, due mainly to a decline in the price of steel merchant bars.

In the United States the October output of coke pig iron exceeded three million tons for the first time since last April and was about one-half million tons greater than the October production of a year ago. The average daily rate showed an increase of 6,655 tons over the daily rate of September which in turn was 3,632 tons per day over August. There was a net gain of six active furnaces in October, thirteen having been blown in and seven blown out or banked during the month.

Full statistics of coal production during October are not yet available. The output of coal from Canadian mines during September was 20 per cent greater than the production for the preceding month, but was 10 per cent below the average for September in the past five years. The figures were 1,191,081 tons in September as against 988,824 tons in August, and an average for the month during the five preceding years of 1,312,448 tons.

Production in September showed a considerable gain over August in Nova Scotia and Saskatchewan, but slightly lower figures for Alberta, British Columbia and New Brunswick than in the preceding month. Of the five coal-producing provinces, Saskatchewan and Nova Scotia were the only provinces which reported a greater output in September than the average tonnage for the month in the five preceding years. The total number of men employed in the coal mines of Canada during September was 26,174, of whom 19,886 worked underground and 6,288 on surface, as compared with a total of 22,654 in August, of whom 16,841 worked underground and 5,813 on surface. Production per man was 45.5 tons in September as against 43.5 tons per man in August. During September, the production per man-day was 2.3 tons, as compared with 2.2 tons in August. The tonnage lost (Table No. 5) was largely due to "lack of orders" and "other causes."

Eighteen cars containing approximately 1,321,156 pounds of silver ore were shipped from the Cobalt Camp during the month of

November; this compares with fifteen cars of silver ore containing 1,199,183 pounds shipped in the previous month.

The Nipissing Mines shipped 264 bars containing 302,917.18 ounces of silver, and The Mining Corporation of Canada shipped 304 bars containing 303,715.61 ounces of silver, making a total of 568 bars containing 606,632.79 ounces of silver shipped during the month of November. This compares with 431 bars containing 456,291.16 ounces of silver shipped in the month of October.

A report from the British Columbia Forestry Branch shows that 219,600,213 feet of timber board measure, was scaled in the province in October. The total amount of timber scaled in the province during the first ten months is given as 1,832,138,944 feet board measure.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, amounted to \$27,175,821 in October, 1925, as compared with \$22,830,698 in October, 1924. The gross earnings for the first ten months of the year are given as \$196,444,081, as compared with \$195,325,323, in the same period last year.

The gross earnings of the Canadian Pacific Railway Company as given in a preliminary statement, were \$19,569,188 in October, 1925, as compared with \$19,352,340 in October, 1924. The gross earnings for the first ten months of 1925, were \$144,243,276 as compared with \$148,711,039 in the first ten months of 1924.

BUILDING PERMITS

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty cities during the month of October showed an increase of 11.4 per cent as compared with the previous month. In comparison, however, with the same month last year, a decline of 6.4 per cent was shown. The total value for October, 1925, was \$11,059,697; for September, 1925, \$9,931,968, and for October, 1924, \$11,817,189.

The *Maclean Building Review* estimates the total value of the contracts awarded in November as \$46,972,800 as compared with \$29,647,500 in October, and \$24,614,200 in November, 1924. Of the contemplated new construction in Canada in November, 1925, \$16,215,800 was for residential building; \$6,270,200 for business building; \$5,792,800 for industrial building, and \$9,270,400 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). Contemplated new work in November aggregated \$37,549,200 as against \$36,253,300 for November, 1924. The activity was distributed among the provinces

as follows:—Quebec, 53.9 per cent; Ontario, 39.9 per cent; Prairie Provinces, 3.7 per cent; British Columbia, 1.8 per cent, and the Maritime provinces, .7 per cent.

EXTERNAL TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in October, 1925, the merchandise entered for consumption amounted to \$80,799,757, as compared with \$68,183,615 in October, 1924. The domestic merchandise exported amounted to \$143,548,112 in October, 1925, as compared with \$108,497,911 in September, 1925, and \$103,292,462 in October, 1924. Foreign merchandise exported amounted to \$917,807 in October, 1925, and \$1,023,719 in October, 1924.

The chief imports in October, 1925, were: Fibres, textiles and textile products, \$15,365,267; iron and its products, \$14,942,698, and non-metallic minerals and products, \$12,228,561.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$70,556,466; wood, wood products and paper, \$24,898,877, and animals and animal products, \$20,981,135. In the seven months ending October, 1925, exports of agricultural and vegetable products, mainly foods, were valued at \$267,294,018, and wood, wood products and paper, \$162,463,292.

Strikes and Lockouts

The time loss due to industrial disputes in November was greater than in either October, 1925, or November, 1924. There were in existence during the month nine disputes, involving 3,594 employees, and resulting in a time loss of 34,832 working days, as compared with eleven disputes in October, involving 732 workpeople and resulting in a time loss of 12,533 working days. In November, 1924, there were recorded three disputes, involving 353 employees and a time loss of 5,148 working days. Five new strikes and lockouts commenced during November with a time loss of 28,958 working days. One of the strikes and lockouts commencing prior to November, and two of the strikes and lockouts commencing during November, terminated during the month. At the end of the month, therefore, there were seven strikes and lockouts affecting 1,726 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices continued to advance due mainly to higher prices for potatoes, eggs and butter. The cost per week of a list of twenty-

nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.23 for November as compared with \$10.89 for October; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. Besides the substantial advances in the prices of potatoes, eggs and butter there were less important advances in the prices of milk, cheese, lard and salt pork. Slight declines occurred in the prices of flour, bread, rolled oats, beef, mutton, sugar, beans and prunes. Including the cost of fuel and rent with that of foods, the total budget averaged \$21.51 at the beginning of November as compared with \$21.11 for October; \$20.81 for November, 1924; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.13 for November, 1920; \$26.92 for July, 1920 (the peak); \$21.61 for November, 1918, and \$14.36 for November, 1914. In fuel both coal and wood prices advanced slightly. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics showed a substantial advance to 161.1 as compared with 156.6 for October; 157.7 for November, 1924; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.5 for November, 1920; and 256.7 for May, 1920 (the peak). In the grouping according to chief component material five of the eight main groups were higher, two were lower and one was unchanged. The groups which advanced were: Vegetables and Their Products due to higher prices for grains, flour and other milled products and potatoes; Animals and their Products due to higher prices for eggs and cheese which more than offset the declines in prices of hogs, sheep and meats; Wood, Wood Products and Paper because of higher prices for spruce lumber; Non-Ferrous Metals due to increased prices for copper, silver, tin and solder; and Chemicals and Allied Products. Fibres, Textiles and Textile Products declined mainly because of lower prices for raw cotton and cotton yarn. Iron and its Products was lower because of lower prices for tin plate, round and square steel bars and black steel sheets which more than offset the advances in pig iron and iron scrap. Non-Metallic Minerals and Their Products were unchanged.

The Legislature of New South Wales has passed a bill providing for the introduction of a forty-four hour working week throughout the state.

NOVA SCOTIA COAL COMMISSION

THE Commission appointed by the Government of Nova Scotia to inquire into the coal mining industry following the cessation of work in the principal mines from March 6 to August 9, held its first session on November 3. The constitution of the Commission and the matters to be inquired into were given in the *LABOUR GAZETTE* for November, pp. 1076-7. The appointment of the Commission was one of the provisions in the terms of settlement of the dispute proposed by the Government of Nova Scotia and accepted by the parties to the dispute, including an interim contract for six months.

Between November 3 and November 11 the Commission visited the mines and mining districts in Cape Breton Island, and began public hearings on November 11. It was arranged that the Commission would issue each day a report on the proceedings and the press was requested not to publish other information. Later it was arranged that the Canadian Press would co-operate with the Commission in preparing these statements.

The secretary of the Commission was Mr. T. J. Brown, Deputy Minister of Works and Mines for the Province of Nova Scotia, and the attorney and assistant secretary of the Commission was Mr. Claude S. Richardson. The Technical Advisor of the Commission was Mr. W. T. Armour who accompanied the chairman from England.

The miners were represented by the district officers, President J. W. McLeod; Vice-President Joseph Nearing; Secretary A. A. Mackay, and International board member William Hayes, and by A. D. Campbell, solicitor. The employers were represented by certain of the officers and staff of the British Empire Steel Corporation, president Roy Wolvin; vice-president J. E. McLurg; general superintendent of mines, Alex. S. McNeil; general manager of the Dominion Coal Company, H. J. McCann; the engineer for the Corporation, Walter Herd, and by F. H. Markey, K.C., and the Honourable F. H. Phippen, K.C., solicitors.

Mr. Tom Moore, President of the Trades and Labour Congress of Canada, and Mr. John L. Lewis, International President of the United Mine Workers of America were not present as anticipated.

The first witnesses were those for the miners, including the District President and miners, who gave information as to working and living conditions. These were followed by Messrs. Silby Barrett and Robert Baxter, Ex-Presidents of the District, and by Mr. J. B. McLachlan, ex-editor of the *Maritime Labour Herald*, and Secretary of the District

from its first organization to 1923. The chairman announced November 25, that any member of the general public might be heard if the secretary were notified, but none applied.

On November 26, the president of the Steel Corporation began his evidence and was followed by the other officers and staff, giving information as to the organization of the Corporation and as to the condition of the constituent companies. Private hearings of the Commission were held for certain evidence and statements from the companies' books were given the Commission whose accountant also examined the books and documents in the offices of the constituent companies.

On November 28, evidence was given by Mr. J. C. Watters, President of the Trades and Labour Congress of Canada from 1911 to 1918, adviser to the Fuel Controller, and organizer for certain bodies in Nova Scotia after that date.

It had been arranged that cross-examination of witnesses would be by the officers of the Miners and of the Corporation, but not by counsel.

Early in December it was announced that the Commission would take further evidence at Halifax, later at Montreal and again at Halifax as to mines in Pictou and Cumberland, and on behalf of the public.

Compensation in the Fishing Industry

The Nova Scotia Accident Prevention Association recently appointed a committee to consider the problems of the fishing industry in regard to the Provincial Workmen's Compensation Act, and to devise means for securing better conditions of work. Practically all the men engaged in fishing are partners in the industry, making it in a sense a co-operative venture, the vessel owners taking half the proceeds of the catch and the crew sharing the other half. The owners therefore consider it unfair that while they fit out the schooners, pay half of all expenses, and receive only half the proceeds of the venture they are compelled to pay the entire compensation assessment. They contend that this item of compensation should be charged to general expenses, and that the vessel owners and the sharesmen should bear an equal proportion of the assessment.

In regard to compensation, fishermen injured on the Newfoundland banks are taken to a port in that country, and receive no compensation; and there is a feeling among those engaged in the industry that despite the high rate of assessment adequate protection is not provided.

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1925

THE number of strikes and lockouts during November was nine, as compared with 11 in October. The time loss for the month was greater than during November, 1924, being 34,832 working days, as compared with 5,148 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
November, 1925.....	9	3,594	34,832
September, 1925.....	11	732	12,533
November, 1924.....	3	353	5,148

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Five disputes, involving 250 employees, were carried over from October. One of the strikes and lockouts commencing prior to November, and one commencing during November, terminated during the month. At the end of November, therefore, there were on record seven strikes and lockouts as follows: coal miners, Drumheller and Wayne, Alberta; clothing workers at Toronto; hat and cap makers at Toronto; fur workers at Montreal; printing compositors and stereotyper at Edmonton; moulders at Owen Sound, and boiler-makers and pipefitters at Victoria, British Columbia.

The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet called them off. Information is available as to six such disputes, namely, cigarmakers at Montreal, commencing March 24, 1925; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Hamilton, January 30, 1925; moulders at Sarnia, March, 3, 1925, and street railway employees at St. John, N.B., June 29, 1921.

Of the disputes which began during November, three were for increased wages and one was against a reduction in wages. Of the strikes and lockouts which terminated during November one was in favour of employees, and one was indefinite pending a final settlement by a Board of Arbitration.

Information has been received as to a dispute about wages in a coal mine at Canmore, Alberta, which was reported to have caused a cessation of work for three weeks, work being resumed November 26, after an arrangement to have the dispute settled by the pit committee and the mine manager. Further particulars have not been received.

The following notes give particulars in regard to certain disputes in addition to information given in the tabular statement.

COAL MINERS, DRUMHELLER AND WAYNE, ALBERTA.—A strike of 1,465 coal miners for an increase in wages for drivers from \$4.90 a day to \$5.40 a day occurred on November 30, and remained unsettled.

CLOTHING WORKERS, MONTREAL, QUE.—This strike for an alleged violation of the agreement commencing October 2, involving 18 employees was reported in the November issue without full particulars. After negotiations the employer agreed to abide by the agreement and work was resumed November 23.

CLOTHING WORKERS, TORONTO, ONT.—Nine clothing workers employed by one firm went on strike November 16, for increased rates on piece-work. This strike remained unsettled at the end of the month.

BOOT FACTORY EMPLOYEES, QUEBEC, QUE.—A dispute involving 2,100 employees, approximately 1,500 men and 600 women, in 14 boot and shoe factories, occurred at Quebec on November 16, in regard to a reduction in wages. The employers had proposed a new contract with the union providing for a wage scale said to be 20 per cent or more lower, and new working rules. During the negotiations carried on previous to the cessation of work the union agreed to the changes in working conditions, but not to the changes in wages. After being out of work for two weeks the Administrator of the Archdiocese of Quebec was successful in getting the two parties to agree to settle the dispute as to wages by resuming work pending arbitration, work being resumed under the new factory rules on November 30. Arrangements for the arbitration had not been made at the end of the month.

UPHOLSTERERS, MONTREAL, QUE.—In the strike of upholsterers at Montreal which began June 27, against alleged bad working conditions, the workers have from time to time secured work elsewhere, and at the end of November none were receiving strike pay, but the union has not called off the strike.

BOILERMAKERS AND PIPEFITTERS, VICTORIA, B.C.—Twenty boilermakers and helpers called pipefitters went on strike November 26, for increased wages from \$6.20 and \$4.80 respectively per day, to \$7.20 and \$6.40 per day. This strike remained unsettled at the end of the month.

STRIKES AND LOCKOUTS DURING NOVEMBER, 1925.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to November, 1925.			
MANUFACTURING—			
<i>Clothing, including knitted goods:</i>			
Clothing workers, Montreal, Que.	18	306	Commenced October 2, against alleged violation of agreement. Settled by negotiations and work resumed November 23; in favour of employees. Commenced June 16, for recognition of the union. Terminated.
Hat and cap makers, Toronto, Ont.	10	240	Commenced June 16, for recognition of the union. Terminated.
<i>Fur and leather products, other than boots and shoes:</i>			
Fur workers, Montreal, Que..	200	4,800	Commenced April 1, failure to renew agreements and proposed substitution of individual agreements. Terminated.
Fur workers, Toronto, Ont....			Commenced February 20, for recognition of the union. Information received indicates employment conditions no longer affected.
<i>Printing and publishing:</i>			
Printing compositors and stereotypers, Edmonton, Alta.	13	312	Commenced June 19, against reduction in wages. Terminated.
<i>Iron, steel and products:</i>			
Moulders, Owen Sound, Ont..	9	216	Commenced January 19, against a reduction in wages. Terminated.
<i>Miscellaneous:</i>			
Upholsterers, Montreal, Que..			Commenced June 27, for improved working conditions. Information received indicates employment conditions no longer affected.
(b) Strikes and lockouts commencing during November, 1925.			
MINING, NON-FERROUS, SMELTING AND QUARRYING—			
Coal miners, Drumheller and Wayne, Alta.	1,465	1,465	Commenced November 30, for increased wages. Terminated.
MANUFACTURING—			
<i>Clothing, including knitted goods:</i>			
Clothing workers, Toronto, Ont.	9	113	Commenced November 16, for increased rates for piece work. Terminated.
<i>Boots and shoes (other than rubber and felt):</i>			
Boot factory employees, Quebec, Que.	2,100	27,300	Commenced November 16, against a reduction in wages. Settled through the mediation of the Bishop of Quebec and work resumed November 30, pending final settlement by a Board of Arbitration.
CONSTRUCTION—			
<i>Buildings and structures:</i>			
Boilermakers and pipefitters, Victoria, B.C.	20	80	Commenced November 26, for increased wages. Terminated.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Proceedings at First Meeting

THE first meeting of the Canadian National Railways Employees' Board of Adjustment No. 2, was held in Montreal, on November 17 to 19 inclusive. The establishment of this Board was noted in the last issue of the *LABOUR GAZETTE*. It deals with disputes arising between the management of the railways and the clerks and certain other office and station employees who are named in the schedule of rules governing these classes contained in the existing agreement between the Railways and the Canadian Brotherhood of Railway Employees. The procedure followed by the new Board is similar to that of the Canadian Railway Board of Adjustment No. 1 (*LABOUR GAZETTE* August, 1925, and previous issues), which deals with disputes arising between the various railway companies and the members of the railway Brotherhoods.

Board of Adjustment No. 2 is composed of the following members:—

Representing the railway—Mr. H. Morton, Moncton, N.B.; J. F. Aichison, Toronto, Ontario; D. Turney, Toronto, Ontario; W. A. Kirkpatrick, Saskatoon, Sask.

Representing the employees—Mr. A. R. Mosher, Ottawa, Ont.; M. M. Maclean, Ottawa, Ont.; N. L. Preston, Winnipeg, Man.; and C. H. Minchin, Calgary, Alta.

All members of the Board were present at the first meeting excepting Mr. Kirkpatrick, whose place was filled by his substitute, Mr. A. E. Crilly, Chief of the Wage Bureau, Montreal. The Board adjusted differences in nine cases, which are outlined below.

Case No. 1.—Traffic Department, Atlantic Region.

A stenographer in the General Baggage Agent's Office, Moncton, N.B., submitted a claim for the maximum apprentice rate of pay as of February 22, 1925, to July, 1925, the date on which she was promoted to another position. The employees' contention was that having served more than two years as a clerk, she was entitled to maximum apprenticeship rate from a date forty-five days previous to the date on which claim was filed, until transferred to another position, as per Article 14, Rule D of schedule. No written statement was submitted by the Railway nor oral evidence given in rebuttal of the claim.

The Board sustained the claim of the employees.

Case No. 2.—Traffic Department, Atlantic Region.

Another employee in the same office filling a position covered by item 2 of Article 2 of the schedule, claimed the rate of \$45 per month, the maximum rate for such employees as of February 22, 1925. The employees contended that this employee having served more than two years in a position as above stated was entitled to the maximum rate for such position, \$45 per month from a date forty-five days previous to the date on which claim was filed, as per Article 14, Rule D of the schedule. No written statement was submitted by the Railway nor oral evidence given in the rebuttal of the claim.

The Board sustained the claim of the employees.

Case No. 3.—Traffic Department, Atlantic Region.

This case was similar to Case No. 1.

Case No. 4.—Traffic Department, Atlantic Region.

A clerk in the same office submitted a claim for maximum apprentice rate of pay as of February 22, 1925. The employees contended that this employee having served more than two years as a clerk, was entitled to the maximum apprenticeship rate of \$87.50 per month as per Article 13 of the schedule, from a date forty-five days previous to the date on which claim was made for the rate, to the General Baggage Agent. No written statement was submitted by the Railway nor oral evidence given in rebuttal of the claim.

The Board sustained the claim of the employees.

Case No. 5.—Sleeping, Dining and Parlour Car Department.

This case concerned the interpretation of Article 25, Rule A. "Detention" Schedule Sleeping, Dining and Parlour Car Department. The employees asked for interpretation of the above rule and instanced two specific cases of detention for which they contended the employees should have been paid thereunder.

A steward and his crew left Montreal on June 25 on their regular assignment and arrived in Winnipeg on June 27. They left Winnipeg on the return trip June 28 and arrived in Beachburg, near Ottawa, about 3.30 a.m. on June 30. Their car was cut off the eastbound train at that point and returned

to Winnipeg, arriving there on July 1. They left Winnipeg, July 2 and arrived in Montreal on July 4, four days after the date they were due to arrive on the first trip mentioned.

Another steward and his crew left Montreal on their regular assignment, May 17, and arrived in Winnipeg May 20, twenty-four hours late. Instead of being returned to Montreal on their regular train they were ordered through to Edmonton, from which point they returned to Winnipeg. From Winnipeg they were returned to Montreal on the Winnipeg train, arriving in Montreal on May 27, five days later than the date they would have arrived had they not been sent through Edmonton.

The employees contended that these stewards and their crews should be paid detention time as per Article 25, Rule A. The contention of the Railways was that they should be paid for loss of layover under Article 25, Rule B of the schedule.

The decision of the Board was that on the question of interpretation of Article 25, Rule A (compensation for detention) in all cases where a crew is late in arriving at any terminal (either home or distant) for any reason except when required to double back, they shall be paid in accordance with Rule A of Article 25. Where called upon to double back either out of a terminal or en route, they shall be paid for loss of layover in accordance with Rule B of Article 25, and the claim of the two stewards and their crews are to be settled on that basis.

Case No. 6.—Sleeping, Dining and Parlour Car Department.

The employees submitted a claim to have sleeping car conductors placed on sleeping cars operating between Halifax, N.S., and St. John, N.B., on trains numbers 1, 411, 8 and 20 in accordance with Article 14 of the Rules for Sleeping and Dining Car Employees, effective October 1, 1920, which reads as follows:—"Regular passenger trains between Halifax and St. John six days per week—three regular conductors and porters."

At the time the schedule was agreed to there was a through passenger train operating between Halifax and St. John. Since that date the through passenger train has been discontinued, but as a sleeping car has been operated between the above mentioned stations on the four trains indicated the employees contended that so far as the sleeping car department was concerned regular passenger trains were being operated six days per week and that sleeping car conductors should be employed. They further contended that if the present service was regarded as a

new run the Railway should have conferred with the employees' General Committee as to the manning of the sleeping cars operated thereon. The Railways contended that the regular passenger trains Nos. 9 and 10 operating between Halifax and St. John were discontinued on September 26, 1924, and that the new service did not constitute a similar service to that covered by Clause 4 of Article 14 of the schedule, also that there was not sufficient work to be done on this run to justify sleeping car conductors being used in addition to porters.

The decision of the Board was as follows:—"As apparently Article 14 of the schedule has not been complied with in the manning of this service since the withdrawal of through passenger night trains by the abolition of trains 9 and 10, the Board decided that the case be referred back to the parties concerned who should promptly confer and endeavour to arrive at a settlement. Failing a settlement the case is to be referred back to the Board within thirty days of this date."

Case No. 7.—Accounting Department, Montreal.

An employee submitted a claim for the position of local rates checker. On July 20, 1925, a position classified as Local Rates Checker, rated at \$160 per month, in the Auditor of Freight Accounts Department (Rates Department) was bulletined. The position was awarded to another employee who had approximately six months' less service in the Railway than the claimant. The employees contended that the senior applicant was entitled to the promotion. The Railways contended that the claimant being employed in the Investigation Department had no experience in the Rates Department and was therefore not capable of filling the position bulletined. In addition to considering the written statement containing the contention of the employees and the Railways, the employees appeared before the Board and submitted oral argument. Evidence of other employees as to the qualifications of the claimant for the position was also heard and it developed that the position in question was that of second in charge of a staff of about sixty-five clerks.

The Board denied the employees' claim.

Case No. 8.—Accounting Department, Moncton, N.B.

The employees submitted a claim to have the position of Material Distribution Clerk in the Auditor of Disbursements Office, Moncton, bulletined in accordance with schedule effective September 16, 1924. The employees

contended that the position of Material Distribution Clerk, having become vacant July 1, 1925, by reason of the previous occupant being granted leave of absence for six months dating from January 1, 1925, the position should have been bulletined as at the former date and the position awarded to the senior qualified applicant. The contention of the Railways was that this position was previously covered by schedule under "Auditor of Stores and Mechanical Accounts," and being subsequently merged with the Auditor of Disbursements Office had lost its identity as a separate unit, and that the vacant positions in the latter Department not having been bulletined prior to January 3, 1925, the Department was not called upon to bulletin such position, the same having become vacant they claimed on January 1, 1925, the date the former occupant retired from the service and not July 1 as claimed by the employees.

The Board decided that the rate as shown for the position when in the Office of Stores and Mechanical Accounts having been re-established the position should now be bulletined.

Case No. 9.—Accounting Department, Moncton, N.B.

The employees submitted a claim for the continuation of schedule rates for the position of Labour Distribution Clerk, Material Distribution Clerk, Assistant Labour Distribution Clerk, Clerk Assistant Mechanical Pay-rolls, Timekeeper Mechanical Pay-rolls and Wahl Operator. The employees contended

that the Railways were insisting upon reductions of rates for these schedule positions contrary to the agreement between the Railways and Employees' Committee that there would not be any reduction in rates of pay, and that the rates of pay for these positions in the Auditor of Disbursements' Office, Moncton, should continue as set forth in the schedule effective February 16, 1923, and that employees filling such positions should receive the rates as shown in the said schedule. The Railways contended that because of the merger of a part of the staff of the Auditor of Stores and Mechanical Accounts with the Auditor of Disbursements Office the duties incidental to these positions were not the same, but that no reduction had been made with the exception of the position of Material Distribution Clerk.

The Board's decision was as follows:—
"Whereas the position of Material Distribution Clerk, as established in the Auditor of Disbursements Office, did not carry with it the entire duties of the position as when in the Office of Auditor of Stores and Mechanical Accounts, it is decided that inasmuch as no change was made in the rate at the time the position was merged with the Auditor of Disbursements Office the rate of \$158 per month as previously shown in the schedule for this position should be re-established. In view of the fact that no reduction has actually taken place in the rates for the other six positions enumerated in this case, it is decided that such claims are not a matter for consideration by the Board."

Vacations with Pay in Industries in New York State

A special bulletin (Number 138) issued by the Department of Labour of the State of New York, gives the results of a recent inquiry into the policy of manufacturers in regard to vacations with pay.

Vacations with pay were given to office workers in 91 per cent of the plants, to foremen in 68 per cent, to production workers in 18 per cent. Certain types of production workers were in some cases excluded from vacation policies; these were in most instances piece workers. Large plants more often than small plants had vacation policies for production workers; 30 per cent of the plants having more than 500 employees as opposed to 15 per cent of those having less than 100 employees. The chemical and food industries had a large proportion of plants which had vacation policies for production workers; the textile, wood, leather, stone, clay and glass industries a small proportion.

The usual length of vacation for office work-

ers was twice that for production workers, the majority of plants giving two weeks' vacation to office workers and one week to production workers. Eligibility for vacation was based primarily upon a minimum period of employment, 60 per cent of the plants requiring that all workers, office, foreman and production, be employed a year in order to qualify for vacation. The usual basis of pay for time workers was the full weekly wage; for piece workers the average weekly wage. Vacations were almost universally given during the summer months. A general shut down during the vacation period occurred in 17 per cent of the plants which gave vacations to production workers.

Seventeen factories or 6 per cent of the plants which had established vacation policies for production workers, had abandoned them. Of those plants which had maintained vacation policies, 98 per cent found them satisfactory.

JOINT COUNCIL IN THE PULP AND PAPER INDUSTRY

Work of Laurentide Council during Three Years

ABOUT three years ago the Laurentide Company, Limited, of Grand'Mère in the Province of Quebec, organized a joint industrial council under the title of the Laurentide Council. This company manufactures pulp and paper, and employs about twelve hundred workpeople. The purposes of joint councils in industry were outlined in a supplement to the *LABOUR GAZETTE* for February, 1921. This form of industrial co-operation was brought into prominence by the report of the Royal Commission on Industrial Relations which in their report (*LABOUR GAZETTE*, July, 1919, *Supplement*) recommended that the organization of such councils should be encouraged as a "means for insuring that industrial conditions affecting relations between employers and employees shall be reviewed from time to time by those concerned, with a view to improving conditions in the future." At the same time the Commissioners declared themselves to be "under no illusion as to industrial councils constituting a universal panacea for all industrial troubles. Their usefulness will depend upon the spirit with which they are adopted. We believe, however, that nothing but good can possibly result from their establishment in all industries where a considerable number of people are employed."

The Laurentide Council

Three years ago no organization existed among the employees of the Laurentide Company through which negotiations with the management could be conducted. The Laurentide Council was therefore organized as a connecting link between the Company and its staff to deal with all complaints or suggestions on the part of the employees and to make known the policies and plans of the management. Its purposes are stated in the Rules and By-laws as follows:—

✓ "The Laurentide Council is formed for the purpose of furnishing a means whereby the ideas, suggestions or criticisms of the employees of the Laurentide Company may be brought before the management of the Company in a way that will assure the management that such ideas, suggestions or criticisms are those held by a majority of the employees, and have been duly considered before being presented, and also in order that the general policies of the Company, as decided upon by the Management, may be properly presented and explained to the employees.

"It is not proposed that the Council shall have any powers to enforce its decisions either upon the employees or the management, but that any question brought before it as to the successful operation of the Company's mills, may be fully discussed and carefully considered from all points of view, and the decisions reached may then be presented both to the employees and the management in any way that the Council may see fit."

The Rules further provide that "there shall be no discrimination under this plan against any employee because of race, political or religious affiliation, or membership in any labour or other organization" and that "every representative shall be wholly free in his performance of duties as such and shall not be discriminated against on account of any action taken by him in good faith in his capacity as representative."

✓ The Council consists of twenty-five members, eighteen elected by the workmen and seven appointed by the management. The preliminary work on grievances and minor cases that come up is handled by an executive committee of five men, elected by the Council from its own membership, which meets every Monday afternoon unless there is no business to come before it. Any cases which it is able to settle to the satisfaction of all parties concerned are considered closed without being brought before the general council. The latter ✓ meets regularly once a month; though special meetings may be called at any time necessary. Under a recent amendment to the Rules the employees elect their representatives according to parliamentary methods.

The Rules and By-laws fix the basis of representation as follows:—

Ten representatives are elected from the paper mill, finishing and shipping department, beater room, cutter room and core room.

One representative from paper mill repairs and cleaners.

One representative from sulphite mill (digester house and acid plant, screen room, day gang and repairs).

One representative from groundwood mill (grinder room, screen room and repairs).

One representative from steam plant and railway department.

One representative from wood preparing departments (logs to mill, barker room and chipper room).

Two representatives from machine shop, blacksmith shop, millwrights, electricians (No.

1 and No. 2 payrolls), pattern shop, pipe fitters, painters and tinsmiths.

One representative from general mills (policemen and watchmen, etc.), mill supply, village, stables, labourers, roads and yards.

There are thus eighteen representatives of the workmen on the Council. Each voting group has entire freedom to determine the method it will elect its representatives to the Council. The term of office of the Council is one year.

During the three years of its existence the Laurentide Council has successfully dealt with all cases in regard to wages, working conditions, etc., which have come before it; and has in addition originated three schemes of considerable importance to the employees, the "Stock Purchasing Plan," the "Employees' Saving Plan" and the "Vacation Plan."

Stock Purchasing Plan.—Under the Stock Purchasing Plan, which went into effect in 1923, a block of 2,000 shares of Laurentide stock was sold to the employees on the instalment plan, payment being made at the rate of \$1 per share or more, on each pay day. In addition to the regular dividends on this stock the Company pays an annual bonus of from \$1 to \$5 a share, according to the subscriber's length of service, for a period of five years from the date of subscription, provided the subscriber holds the stock and remains in the Company's service. These bonuses cost about \$7,300 during the past year. Payments on

the last of the outstanding subscriptions will be completed about the end of the year, after which the Council are in hopes of securing another issue as soon as conditions warrant it. There were 591 subscribers to the plan out of a total payroll of about 1,100.

Employees' Saving Plan.—The Employees' Saving Plan, originally thought of as a temporary means of enabling those who had completed payments on their stock subscriptions to continue their savings, has proved unexpectedly popular since the beginning, and has attracted a considerable number of men who did not go in for the original "Stock Purchasing Plan." Under its provisions any employee may have any part of his pay up to a maximum of 20 per cent deducted from his pay cheque and held by the Company to the credit of his account. Interest on credit balances at the rate of 6 per cent per annum is allowed, and credited to each man's account on January 1, and July 1, each year. It is expected that if and when a new stock issue is brought out, most of the credits accumulated by the men will be applied in payment of their stock.

Vacation Plan.—The "Vacation Plan" which has now been in effect for two years is still regarded as being more or less on trial. It provides that every employee of more than five years' service shall have one week's vacation with pay each year.

Success of Co-operation Plan in C.N.R. Shops at Winnipeg

The *Alberta Labour News*, in an article by Robert Hewitt on the Co-operation Plan in the shops on the Canadian National Railways system, states that good results have followed already from joint management in the Winnipeg shops. The establishment of the "Baltimore and Ohio plan" throughout the Canadian National Railway system was noted in the September issue of the *LABOUR GAZETTE*, and in previous issues.

"Conditions in the shops are already more safe, more sanitary and more convenient. The work goes on in many instances with less exertion, less suspicion, and less antagonism. Material formerly secured from outside non-union firms where it was produced under sweat-shop conditions, is gradually being manufactured in our own shops, under union conditions and at a lower cost to the company. Schedule violations are becoming fewer, and are more speedily adjusted, while at the same time the stabilization of employment as well as the gradual elimination of the very obnoxious, individual bonus system

found in some large eastern shops are due in no small measure to the introduction of this co-operative method of shop management.

"There has at times been a suspicion in the minds of some of us that the introduction of the co-operative method might have a tendency to lessen our interest in our trade unions. I am free to admit that I was one of those who was inclined to be sceptical, but I find to-day that as far as Winnipeg is concerned, that all of the C.N.R. shop trades are now holding more meetings, and larger meetings than formerly. The co-operative method of management is the main centre of interest in their meetings, membership is increasing, as well as interest and enthusiasm.

"To one who knows the Winnipeg shopmen as I have known them, to have been absent for some months during the installation of the co-operative method, and to return again to get in touch with them, the changed relations between employer and employee, the changed mental attitude of both, and the renewed interest in their organizations on the part of

the men, is perhaps more apparent than it would be to one who has been in constant touch with the situation.

"On the future possibilities of co-operation we can only theorise. But to me it seems only logical to assume that it will soon apply as a system institution rather than to individual shops only. Other railway organizations are already making enquiries regarding it, so that it is quite within the bounds of possibility, that as time goes on we will

come to workers' participation in the management, not only of the shops here and there, but also in the mechanical and operating departments of the entire system." It is my earnest hope that in the not far distant future, we shall have equal representation on every body of management up to and including the Board of Directors which to me ranks equal in importance to having workers representation on any governing body in the country, whether Federal, Provincial or Municipal."

INSURANCE OF WAGE-EARNERS AGAINST SICKNESS

THE International Labour Office, in a memorandum on the number of wage-earners compulsorily insured against sickness in various countries, points out that the remarkable progress of compulsory sickness insurance during the last forty years is illustrated by the fact that since 1883, the year when Germany made sickness insurance compulsory for the great majority of its industrial wage-earners, as many as twenty-two States have introduced compulsory sickness insurance schemes, varying somewhat in scope, for their wage-earners. At the end of 1924, there were in Europe more than fifty million wage-earners of various occupations compulsorily enrolled in sickness insurance organizations.

General Workers' Sickness Insurance

Of the twenty-two States which have instituted compulsory insurance, not less than twelve have adopted, either at the outset or in stages, the principle of general workers' insurance, whereby compulsion to insure is applied to every person living by the proceeds of his labour in a situation of economic dependence.

In the following countries, compulsory insurance applies to the whole of the wage-earning population: Austria (1888); Bulgaria (1924); Chile (1924); Czechoslovakia (1888); Germany (1911); Great Britain (1911); Irish Free State (1911); Norway (1915); Poland (1920); Portugal (1919); Russia (1922); Serb-Croat-Slovene Kingdom (1922). The accompanying table gives information taken from official sources, concerning the number of wage-earners actually insured in eight of these countries, Austria, Czechoslovakia, Germany, Great Britain, Norway, Poland, Russia, Serb-Croat-Slovene Kingdom. Compared with the most recent census figures for the total population, and, where available, for the total wage-earning population, these figures indicate what proportions of these two

totals respectively are covered by compulsory sickness insurance.

NUMBER OF INSURED PERSONS, TOTAL POPULATION AND TOTAL WAGE-EARNING POPULATION IN EIGHT STATES POSSESSING GENERAL WORKERS' SICKNESS INSURANCE

Country	Number of insured persons	Fraction of total population per cent ¹	Fraction of total wage-earning population per cent ¹
Austria.....	1,620,000 (end of 1922)	25	75
Czecho-slovakia..	2,136,600 (end of 1922)	17	75
Germany.....	20,180,500 (end of 1922)	31	84
Great Britain....	15,037,000 (end of 1924)	35	86
Norway.....	592,135 (end of 1922)	22	75
Poland.....	1,725,800 (end of 1924)	6 ²	—
Russia.....	5,735,000 (end of 1924)	6	—
Serb-Croat Slovene Kingdom..	471,232 (end of 1924)	4	—

¹ The figures are approximate, and vary in accuracy according as the general or occupational census was more or less recent.

² 17% if family insurance, which is compulsory in Poland, is taken into account.

³ No figures available.

The table shows that Great Britain is the country in which the highest proportion of the population is insured (86 per cent); it is closely followed by Germany (84 per cent). Then come Austria, Czechoslovakia and Norway with 75 per cent. These five States had already instituted before the war an insurance system covering the whole country. The other countries in the table, ranged in the order of the density of their insured population, are as follows: Poland, Russia, Serb-Croat-Slovene Kingdom.

In the remaining four countries which have adopted general workers' sickness insurance, the scheme has not been applied (Bulgaria, Chile, Portugal) while for the fourth, no recent figures are available (Irish Free State).

Limited Workers' Insurance

In several other countries compulsory insurance, although introduced into the system of labour legislation, does not cover the whole wage-earning population, but only persons employed as manual and non-manual workers in commercial and industrial undertakings. The following countries fall into this group: Esthonia: Labour Code of 1911; Greece: Decree-Act of 8 November, 1923; Hungary: Act No. XIX of 1907; Japan: Act of 22 April 1922; Latvia: Codification of 1922; Luxemburg: Act of 31 July, 1901; Roumania: Act of 25 June, 1912.

For two of these countries official figures are available for the number of insured: Luxemburg (47-174 or 18 per cent of the total population at the end of 1923); Hungary (647-875 or 8 per cent of the total population at the end of 1922).

In the case of three countries, Esthonia, Latvia and Roumania, unofficial estimates are available, while in Greece and Japan the sickness insurance Act has not yet been put into force.

In two great industrial countries, namely France and Italy, compulsory workers' insurance is confined not to certain occupations, but to certain areas. In both these countries compulsory insurance exists only in the territories attached to these countries in virtue of the Peace Treaty.

In the Departments of the Upper-Rhine, the Lower-Rhine and the Moselle the number of insured persons amounted to 413,383 at the end of 1922.

In the new Italian provinces there were at the end of 1922, 92,116 insured persons, not including those insured with the Seamen's General Sickness Fund and the Fiume Sickness Fund.

In Switzerland, compulsion to insure against sickness has been introduced for certain classes of the population by the two Cantons of Appenzell, the Canton of Bâle-Ville and the Canton of St. Gall, in virtue of the Federal Act of 13 June, 1911.

In several States which have not made sickness insurance compulsory, the wage-earning population has the opportunity to join sickness funds of friendly societies set up by private initiative (Argentina, Belgium, Denmark, Finland, France, Italy, Spain, Sweden, Switzerland).

NUMBER OF MEMBERS OF SICKNESS FUNDS OR FRIENDLY SOCIETIES IN THE VARIOUS COUNTRIES

Country	Members of sickness funds or friendly Societies	Fraction of the total population (approximate) per cent
Belgium.....	710,000 (1923)	0
Denmark.....	1,351,357 (1922)	39
Finland.....	100,940 (1922)	3
France (without Alsace-Lorraine).....	2,745,999 (1921)	7
Sweden.....	727,999 (1921)	12
Switzerland.....	1841,196 (1923)	22

¹ Adults only.

As voluntary sickness funds do not prepare statistics of membership by occupation, it is not possible to determine what proportion of the wage-earning population is voluntarily insured against sickness. Certain conclusions may, however, be drawn: there is no doubt that in Denmark, where the fraction of the population insured is highest (39 per cent), the great majority of wage-earners are members of sickness funds. Moreover, in Belgium, Sweden and Switzerland, a considerable proportion of the wage-earners appear to be affiliated to sickness funds.

Finally, a large number of countries, while generally keeping to the principle of voluntary insurance, have introduced one or more special schemes of compulsory insurance for wage-earners employed in certain kinds of undertakings, generally industrial or transport undertakings which are highly organized and offer special risks to wage-earners engaged in them.

Fatalities in United States Coal Mines in September

Accidents at coal mines in the United States in September, 1925, resulted in the loss of 142 lives, according to information furnished by state mine inspectors to the United States Bureau of Mines. All of the fatalities were at bituminous mines, as work at the anthracite mines was suspended during September. No major disasters were reported during the month.

During the first nine months of the present year, 1,612 men have been killed by accidents at the coal mines throughout the United States, a death rate per million tons of 3.76 as compared with 4.48 for the same period last year. Reports for bituminous mines alone showed a nine-months fatality rate of 3.35 as against 4.28 for the corresponding months last year, a reduction of 22 per cent during the present year.

APPRENTICESHIP SYSTEM IN THE BUILDING CONSTRUCTION INDUSTRY AT VANCOUVER, B.C.

A JOINT committee of the General Contractors' Association, the Associated Contractors of British Columbia and the Building Trades Council of Vancouver, B.C., reached an agreement during November under which a system of apprenticeship will be established for carpenters. When this scheme is found to be operating successfully the Joint Committee will endeavour to establish a similar arrangement with regard to bricklayers and masons, and the other crafts represented on the Vancouver Building Trades Council, namely, plumbers, painters, sheet metal workers, structural iron workers, electricians, plasterers and plasterers' labourers,

mill and factory workers, and steam and operating engineers.

The members of the Joint Committee are as follows: Referee, J. K. Macrae; labour representatives, William Watts and William Dunn; contractors' representatives, J. P. Hodgson and W. W. Bailey.

According to reports in the press the Joint Committee expected to complete a preliminary survey of the apprenticeship situation on January 1, when active work under the plan will commence.

The report of the Committee, containing the Articles of Apprenticeship agreed upon, is as follows:—

Report of Committee appointed to enquire into question of instituting an Apprenticeship System in the Local Building Construction Industries

To the President and Members
of the General Contractors' Association:

Your Committee appointed early this year to enquire into the above begs to report as follows:—

During the time that has elapsed since the appointment of this Committee, correspondence has been maintained with the Secretary of the Association of Canadian Building & Construction Industries, Ottawa, as well as with the Masons' Construction Association of the United States and Canada and considerable information has been gathered from this correspondence and the collection of various articles which have been prepared under their authority, as well as those from the Department of Labour in Canada and the Federal Board for Vocational Education at Washington, U.S.A., which would take too long to mention in detail in this report.

Summarizing the Progress which has been made in Canada

A conference was held in 1921 under the auspices of the Department of Labour, at which time it was proposed to institute a scheme of national apprenticeship for the building and construction industries with subsidiary local councils at various points. This scheme, while worked out in detail, has never been put into operation, mainly, we gather, because dependence was placed on the funds for this operation being provided by either the Dominion or Provincial Governments, who failed to provide said funds.

Another proposal made was that funds for Ontario be provided by the levying of an additional assessment by the Workmen's

Compensation Board to take care of the expenses involved. This has not so far been done. Progress has already been made in several cities in Ontario, largely owing to the efforts of Mr. Piggot, who has been instrumental in securing the apprenticeship of a considerable number to learn the trades of carpenter and bricklayer under various local contractors, but without much co-ordination of effort.

The consensus of opinion seems to be that in any workable scheme of apprenticeship, a local council should be set up, composed of members of the Contractors' Association, members of the Trades and Labour Council, and one independent, who select from themselves a Chairman and appoint a Secretary.

The young men desiring to enter a trade are apprenticed to an individual contractor but are subject to the supervision, and, to a certain extent, the authority of the Local Council who act as a means of assuring continuity of employment by switching the apprentice from one contractor to another as work is available.

After careful consideration, we beg to submit for your consideration the following proposal:—

(1) That a Local Council, to be known as the "Vancouver Apprenticeship Council" shall be set up and operated substantially as outlined in the attached "Rules and Regulations."

(2) Such Council to be formed of five members, two appointed by the Contractors' Association, two by the Trade Council of the Building Construction Industry, and one independent member.

(3) *Finance*.—As it will be essential, in starting a scheme of this sort, to employ a part-time paid Secretary, provision of a fund sufficient to continue operations for the first year must be provided; this will probably amount to between \$500 and \$1,000, which we propose should be raised by voluntary subscriptions from members of this Association.

(4) To finance the scheme after its initial start, we proposed that each Contractor who employs an apprentice agrees to pay into the Council fund an amount equal to a small percentage of the apprentice's wages as set out in Clause (9) of this Report, not to exceed 10 per cent.

(5) The apprentice shall attend evening school during the winter months as arranged by the Apprenticeship Council. The apprentice will receive payment of wages when sick, provided that the sickness does not last for longer than one month in any one year, and only on the presentation of a medical certificate.

(6) At the discretion of the Council no apprentice shall start his apprenticeship before the age of sixteen nor after the age of twenty-one years. The apprentice shall if requested produce a medical certificate of good health when indentured to a contractor.

(7) Provision should be made for switching the apprentice from the contractor to whom he is bound, in the event of said contractor not having suitable work on which to place him, to another contractor who is able to furnish suitable work, as set forth by Clause (4) of the Indenture attached hereto. This being a temporary arrangement only until his own employer is able to give him the necessary work.

(8) The apprenticeship should be for a period not less than four years.

(9) Wages to be as follows:—

First half of first year 15 per cent * of journeymen's wages in the trade.

Second half of first year 20 per cent of journeymen's wages in the trade.

First half of second year 25 per cent of journeymen's wages in the trade.

Second half of second year 30 per cent of journeymen's wages in the trade.

First half of third year 35 per cent of journeymen's wages in the trade.

Second half of third year 40 per cent of journeymen's wages in the trade.

First half of fourth year 45 per cent of journeymen's wages in the trade.

Second half of fourth year 50 per cent of journeymen's wages in the trade.

Bonus on completion of apprenticeship to be a minimum of one hundred dollars (\$100) after passing final examination, to be paid

from the funds of the Apprenticeship Council, which would no doubt be increased to those who showed special aptitude and application.

The need for some such scheme has become more apparent to your Committee as from every side has come the cry that competent "tradesmen" are becoming unobtainable, as the older mechanics largely trained under the apprenticeship systems of Europe, drop out leaving no properly trained men to take their places.

We are now assured of the co-operation of the Trades Council of the Building Construction Industry who have invited us to meet them on this question.

Now is the logical time to act. The Contractors' Association has it in their power to render a signal service to the community by providing an opportunity for some of our youth to learn a trade, thereby lessening the problem of unemployment, and at the same time, helping to solve their own problem of inefficient tradesmen.

From out this small beginning would grow the means of providing training not only in the Building Construction Industry, but in other industries which would follow the example set.

Respectfully submitted,

(Sgd.) J. G. HODGSON,

Chairman

of the Apprentice Committee.

VANCOUVER, B.C., September 26, 1925.

Rules and Regulations governing Local Apprenticeship Councils

1. This Council shall be known as the Vancouver Apprenticeship Council.

2. Regular meetings of the Council shall be held monthly when three members present shall constitute a quorum.

3. The general expenses of the Council, not including payment for time or expenses of members attending meetings or acting on behalf of the Council, shall be met by payments by the Employer of an amount calculated as a percentage of the Apprentice's wages, not to exceed 10 per cent of such wages.

4. The Council shall adopt and use the form of indenture issued by the Vancouver Apprenticeship Council, and make rules and regulations for assuring the employer and apprentice that the terms of indenture will be fully carried out in accordance with the following principles:

(a) An apprentice shall be indentured to the employer and the employer shall undertake to give every apprentice the fullest opportunity of efficiently learning the trade

in the workshop, on the job, and by attendance at vocational schools.

(b) The apprentice shall be bound to attend prescribed vocational classes.

(c) Arrangements shall be made, where possible, with the local educational authorities for classes for apprentices at hours and periods during which the apprentices shall attend.

(d) An Examination Board of not less than three members shall be established and shall conduct the examination for apprentices at stated periods.

(e) The Council, may, for cause, cancel indentures when considered desirable, or arrange for the permanent transfer of an apprentice from one employer to another.

(f) In order that apprentices working under the direction of the Council may have the best opportunity of obtaining the widest knowledge of their respective trades, it shall be open to the Council, by agreement with employers, to arrange for short periods of transfer or exchange of apprentices where it appears that by such transfer or exchange of apprentices the apprentice shall acquire special knowledge or experience.

5. The Local Council shall assume responsibility with the employer for providing appropriate facilities for the apprentice to learn all branches of his trade. It shall determine the number of apprentices which may be necessary, due regard being had to the possibilities for future expansion or contraction. It shall regulate the admission to the various trades in accordance with these conditions and subject to the trade agreements existing between the employer and employees. It shall have the right to dissolve the apprenticeship in case of serious default by either party in carrying out the provisions of the indenture.

6. The Local Council shall prescribe all conditions of apprenticeship not fixed by the standard form of indenture.

7. All complaints or disputes arising between employers and apprentices which cannot be settled between the parties, in regard to the conditions of work, discipline, wages, or other matters, shall be referred to this Council who shall have power to adjust such disputes, which shall be binding on all parties.

INDENTURE OF APPRENTICESHIP

THIS INDENTURE made in duplicate this..... day of.....192.., between.....of the City and District of....."First Party"; his minor son....."Second Party"; andhaving their principal place of business in the City of....., and herein represented by....."Third Party":

Witnesseth:

1. That the "First Party," with the consent of the "Second Party," doth hereby engage, place and bind the said "Second Party" to the said "Third Party," to learn the art and trade of....., for a period of four or more years, to be computed as and from the.....day of.....19.....

2. The said party of the "First Party," with the concurrence of the "Second Party," doth hereby covenant, promise and agree to and with the "Third Party," that during the said term of four or more years, the said "Second Party" shall well and faithfully serve the said "Third Party," his secrets keep, his lawful commands and those of his foreman and other superior officers at all times readily and cheerfully obey; that he shall give and devote to the said "Third Party" his whole time and labour, and that he shall not damage nor waste or lend unlawfully any goods belonging to the "Third Party."

3. The hours of the said "Second Party" will be forty-four each and every week of the term of this apprenticeship, excepting Sundays and the following legal holidays—New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day.

4. The said "Third Party" agrees to take the said "Second Party" as an apprentice and give him such opportunity for learning the said art and trade as may be determined by the said "Third Party," his foreman or employees to be suited to the capacity of the said "Second Party," and according to the requirements of the said "Third Party," in his business; also that if the said "Third Party" at any time or times during the said term requires the occasional services of the said "Second Party" in any department or branch of his business, other than that in which the art or trade of.....are required, it shall be lawful and competent, subject to the approval of the Local Council, or the said "Third Party" his foreman or other superior officers, to assign and appoint for the time being, the said "Second Party" for the performance of such work as may be required in such other department or branch of their business, due regard being given to local trade rules, and the "Second Party" agrees to well and faithfully perform such work.

5. The said "First Party" agrees that the "Second Party" may be required to work for any other firm engaged in a similar trade, subject to the ruling of the Local Apprenticeship Council, it being understood that all the time so spent by the "Second Party" shall count as part of the apprenticeship term.

6. The "First Party" hereby agrees that the said "Second Party" may be suspended from the service of the said "Third Party" at any time during the apprenticeship term for want of good and faithful attention to his duties, or for divulging secrets of the said "Third Party," or for his not readily or cheerfully obeying the lawful commands of the said "Third Party," his foreman or other superior officers, or for any justifiable cause whatsoever, provided such suspension shall be subject to an appeal to the Local Apprenticeship Council.

7. The foreman or other superior officer of the "Third Party" shall have the power to suspend the "Second Party" for any misconduct, neglect of duty or insubordination, or for any other just cause, the reinstatement of said "Second Party" being left to the decision of the Local Council whose decision shall be final.

8. Any time lost by the said "Second Party" during the years of his apprenticeship, at whatever time or from whatever cause arising; shall be made good to the said "Third Party" by the said "Second Party," and the year in which the said time has been lost shall be extended until it is fully made up, and the

next succeeding year of the said apprenticeship shall not be deemed to commence until the said lost time shall be deemed to have been made up in the manner aforesaid.

9. The "Second Party hereby agrees to attend evening vocational classes as designated by the Local Council and the "Second Party" agrees to attend such classes, amounting in time to not less than..... hours per year for the first two years, and not less than.....hours per year for the remaining years, and to submit to such annual examinations as may be prescribed by said Council. The "Second Party" further agrees that advancement with respect to standing in the trade and rate of pay shall depend on the passing of such annual examinations.

10. The "Third Party" agrees to pay to the "Second Party," as remuneration for services rendered during the term of apprenticeship, the amounts of money specified below, said money to be paid on the regular pay days:—

During the period of first half of first year 15 per cent of journeymen's wages in the trade.

Second half of first year 20 per cent of journeymen's wages in the trade.

First half of second year 25 per cent of journeymen's wages in the trade.

Second half of second year 30 per cent of journeymen's wages in the trade.

First half of third year 35 per cent of journeymen's wages in the trade.

Second half of third year 40 per cent of journeymen's wages in the trade.

First half of fourth year 45 per cent of journeymen's wages in the trade.

Second half of fourth year 50 per cent of journeymen's wages in the trade.

Bonus on completion of apprenticeship to be a minimum of \$100 after passing final examinations.

No wages will be paid for time lost through default of the apprentice except in case of sickness, when he shall receive pay, provided sickness does not last for longer than one month in any one year and then only on presentation of a Medical Certificate.

11. The "Third Party" may, at his discretion, increase the wages of the "Second Party" without otherwise affecting this Agreement.

12. It is understood between the parties hereto that this Agreement shall be carried out under the general supervision of the Local Apprenticeship Council of Vancouver.

In witness whereof, the said parties have hereto set their hands and seals.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Survey of British Columbia School System

The report of the commissioners appointed early in the summer of 1924 to investigate and report on educational conditions in British Columbia has been in the hands of the public for over a month. It is a large volume of interesting and instructive material which describes existing conditions and offers recommendations affecting every phase of the elementary and secondary educational systems of British Columbia.

Very little space is devoted to technical and vocational education, but the commissioners are of the opinion that more hand activities and work of a pre-vocational nature should be introduced into the schools. They recommend that a director of home economics be added to the provincial staff to organize and promote this work in elementary and secondary schools. They believe that too much emphasis is being laid upon the

technique of manual training to the detriment of the cultural value of this work. The report commends the work that is carried on in nature study and agricultural education, and recommends that teachers of agriculture should in future be required to have the same qualifications and training as the regular high school teachers. The tendency on the part of the technical schools to over-emphasize matriculation courses and neglect the special requirements of boys entering industrial life is regretted. The commissioners fail to see the need for duplicating courses which are provided in the regular high schools. The need for industrial courses in the City of Vancouver is emphasized, and it is recommended that the city and provincial governments co-operate in erecting and maintaining a complete technical institute which would serve the needs of the whole province. This school would provide a great variety of instruction covering industrial, commercial, art and home-making departments. Provision should be made for special short courses extending over a few months and for regular courses of from one to three years.

The appointment of a fully qualified vocational guidance officer for the Vancouver schools is also recommended. In this connection the report states;

"Probably fifty per cent of the adolescents who will complete the middle school course between the ages of fifteen and sixteen years will shortly afterwards be compelled to become wage-earners. Every possible effort should be made to give them preparatory courses in some form of vocational work. The regular

teachers and the school principal will need the advice of a *liaison* officer who is closely in touch with the needs of employers on the one hand and with the possibilities of vocational training on the other.

"Under our modern industrial system the great mass of workers of both sexes cannot possibly receive specific vocational training for a permanent occupation. Industrial and commercial occupations are largely arranged in a series of graduated steps. A boy of sixteen or seventeen enters on a certain level and does a certain kind of work hoping soon to do a different and more difficult work on a higher level. Often each new job requires a course of specific training. The girl of seventeen or eighteen who enters an office needs specific vocational training such as is given in the present Commercial High School. At twenty-two or twenty-three she may require a wholly different type of specific training as home-maker. Part-time courses and evening classes should be available for all industrial and business workers and a vocational officer of the right type would be most valuable in getting young people properly started. In a city like Vancouver there would probably be need for a well-trained woman to assist as adviser to girls."

The Evening Technical School

The benefits and opportunities of evening class instruction are clearly set forth in the following editorial from the *Amherst Daily News*, Nova Scotia, dated October 29, 1925:—

"We have many institutions in Amherst that are doing much for our young people and for our community life in general, but we do not know of any doing more important work in its own particular sphere than the Technical School which opens again next week. These schools were designed in the first place for the purpose of furnishing special knowledge on certain subjects for which a general knowledge may have been derived in the common schools. The word 'technical' indicates their nature. But it was also realized that there were many young people, and even older ones anxious for an improvement in their lot but who had not had the advantages of a common school education. The technical course was accordingly made broad enough to include all classes of people who are seeking to add to their information on any particular subject or subjects, and in this respect is furnishing an opportunity for a large number of people to add to their sum of knowledge.

"These schools are for the ambitious. They are for those who are not afraid of a little extra work. The ordinary person, when through with his day's work does not feel

greatly inclined to take on something new in the way of mental effort. The tendency of many people is to relaxation. The Technical School calls for concentration and for strict application to the task in hand, and the laggard or the indifferent is not likely to meet with much success there. As a matter of fact, it is neither the laggard nor the indifferent who constitute the student body at Technical Schools, but boys and girls, and young women, who realize that life has in store bigger things for them through the gateway of knowledge, and who are endeavouring to qualify themselves for the bigger positions.

"It is gratifying to know that in Amherst our people are taking an increasing interest in the work of the Technical School and that the attendance last year was one of the largest in the history of the institution. Its success was also well above the average. It is possible that there may not be as many young people to take advantage of its opportunities this season as in other years, but there is one thing certain that the opportunity is there and that the course and the teaching staff will be fully equal to any that the school has had before.

"There is no royal road to learning. To many it is a hard road, but it is probable that there is no greater happiness for the average person than to attempt a difficult mental and intellectual task, and be able to accomplish it himself. In the realm of knowledge these joys are perennial ones, and there is no period in one's life when he can say that he has arrived at the sum of knowledge, or that there is no further door to be opened that will add to one's possibilities or to his pleasures. The Technical School is but one step, but it is a very important one and many of those who have taken it can look back on it and say that it was one of the happiest inspirations of their lives. It is to be hoped that many will be saying this in connection with the Technical School opening in Amherst this year."

Doubling the Effectiveness of the Vocational School

"A vocational school without an apprenticeship programme, or a plan of co-ordination, is not yet a true vocational school" says the *Wisconsin Apprentice*. "The good work of helping young workers better to equip themselves for their present as well as future occupations is only half done if nothing is done to help them directly at their place of employment. In other words, the employer must meet the school half-way. The vocational school alone cannot make skilled workers out of its pupils, and, unless the

employer is persuaded to do his share, the efforts of the school go partly to waste. It is highly probable that the school can, in many cases, do as much for the pupil at his place of employment as it can in the classroom. This applies not only to the recognized trades, but to practically all occupations. Strictly speaking, there is no such thing as a 'blind alley' job, unless the word blind refers to those who deliberately close their eyes to the possibilities of such jobs. The employer who sends his juvenile workers to the vocational school because he can see in it some benefit for them, and not merely because it is the law, is a real asset to the school. His support and goodwill is essential if the efforts of the school are to be made effective. And there is no surer way of gaining that support than by contact between school and pupil at the place of employment."

American Association for Adult Education

A decision was reached recently in Cleveland, Ohio, at a meeting of educators from all parts of the country, to form an American Association for Adult Education. A constitution was drawn up for such an organization and was tentatively adopted. This suggests a wide-spread consciousness of the need of systematic attention to a phase of education till now left even without definition, except an "omnibus" one including everything from radio talks on cooking to university extension courses in philosophy. The Carnegie Corporation has already set out to discover just what constitutes "adult education," and will be ready in a few months to give the results of a series of studies not only of existing efforts, but also of the trend of pre-adult and part-time education now provided in many communities. These studies include an inquiry into the nature and extent of university extension instruction, either by correspondence or by direct teaching in classes, including agricultural extension work carried on through co-operation with the United States Department of Agriculture and the United States Bureau of Education. Like studies will show to what extent people are reaching after some desired cultural values or practical aids in lyceum and "Chautauqua" courses, in commercial correspondence schools and similar agencies, in the courses or other educational opportunities offered by religious or fraternal organizations, and in the activities of open forums, people's institutes, workers' colleges and social settlements. To give all these agencies the benefit of the experience of each, and continuously to study the best methods of teaching the subjects when addressed to minds that have reached the reflective age,

will be the main purpose of the association proposed at Cleveland.

The next important step in American education is to be that which prepares millions of adults, endowed with larger freedom and provided with more physical comforts, for a better use of leisure time.

Education and Industry in Great Britain

The President of the Board of Education announced in the British House of Commons on June 22 that he and the Minister of Labour had appointed a Committee of seven members "to inquire into and advise upon the public system of education in England and Wales in relation to the requirements of trade and industry, with particular reference to the adequacy of the arrangements for enabling young persons to enter into and retain suitable employment."

Mr. W. B. Wallis, Board of Education, and Mr. W. H. Lowe Watson, D.S.O., D.C.M., Ministry of Labour, are joint secretaries, and all communications should be addressed to them at the Ministry of Labour, Montagu House, Whitehall, London.

Apprenticeship in South Africa

The Cape Division Building Trades Apprenticeship Committee has been considering a suggestion designed to meet the difficulty attending apprenticeship in trades in which employment is spasmodic and subject to climatic variations. Individual employers hesitate to employ their full quota of bricklayer apprentices, since ordinarily there is not sufficient work to keep the lads continuously employed. The handicap to the employer consists in the necessity of retaining and paying the lad who is bound by contract even while he is idle. In addition, even when work is available, it is often interrupted by weather conditions. It is now proposed to indenture apprentices to an association of employers instead of to individuals, and to ensure continued employment by drafting apprentices from one employer to another according to the work in hand. The disabilities resulting from unfavourable conditions will still remain, but are not so important if the others can be removed. In considering the proposal the Committee decided that the constant changes apart from not harming the apprentices might on the contrary be expected to enrich their experience. It was decided to recommend the Master Builders' Association at Capetown to adopt the suggestion.

The possibilities of this system are being carefully watched by the Department of Labour with a view to its introduction in other areas and industries in which similar difficulties are encountered.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Programme in Pulp and Paper Mills in Ontario

AT a meeting of the directors of the Safety Association held at Toronto on November 4, the following programme for safety work in the Pulp and Paper Industry of the Province of Ontario was decided upon, according to information in the *Pulp and Paper Magazine*.

1. As it has been found that the records for compensation purposes and for accident records are kept in many different ways by the various companies, and it is also known that some companies have no particular method of handling safety work in their mills it was deemed advisable to try and develop some simple system of handling compensation records, of compiling accident data, and devising methods of doing safety work. Of course, there is no intention of asking all the mills to use the same system, but merely a suggestion, in the event of any mill wanting to use it.

It will take some time before the Association can make a definite suggestion along the above lines; but in the meantime, it strongly recommends that one man shall be designated in every mill to handle all the safety work and records, both for compensation and for information. It is believed that this will be of benefit to the plant as well as to the Association. It is not suggested that this one man should have control of, or direct, the safety work in the mill—that is a matter of decision for each mill.

2. Certain decisions were arrived at regarding the computation of accidents, etc., which will be made public later.

3. It was deemed advisable that there should be a complete and free exchange of accident data between all mills. In order to make this effective, the secretary will prepare a "graph" showing the average curve of all the mills based on hours lost per full time worker; and on the curves sent each individual mill will appear, in comparison, the record of that particular mill. This curve is intended for the executive of each company, so that he may see at a glance exactly how the company stands with the average. Later we hope to show on the same graph a curve of the accident record of the lowest mill. It is hoped that this curve will prove beneficial.

4. The main decision was to organize the mills into four groups, so as to be able to carry on intensive safety work that would be suitable to the geography of the country in which the mills were located. One group will con-

sist of the mill in Western Ontario, from Sault Ste. Marie west; the second group will consist of the mills in Northern Ontario, including Espanola, Sturgeon Falls, and Haileybury. Another group will include the mills in Eastern Ontario, such as Ottawa, Cornwall, etc., while the last group will include the mills in Southern Ontario.

It is intended that the mills in these various groups shall get together and discuss the problem of accident prevention in their particular group. This will make it possible to get a larger number of men together in a much smaller area than if we tried to cover all Ontario. It will also take into consideration the problems of safety that are affected by climatic conditions and geography, such as northern mills compared with those in Southern Ontario. In turn the accident record of these different groups will be interesting as compared with one another.

5. It is realized that unless the head executive of every plant takes an interest in this safety work, it is very difficult for men in the plant to carry on enthusiastically and effectively. It is the feeling of those who have endeavoured to try to establish safe mills that clean mills, and the proper discipline, are the forerunners of a safe plant. Consequently, the development of safety work is right along the lines of an executive's duty, and we hope that it will have the support of every executive.

6. The next point that seems desirable to develop is the main causes of accidents; and the secretary will write to every mill for what data or information it has to offer in this respect. If it is possible to get this information, it will be compiled and sent out to the mills interested.

Safety Instruction in Schools at Montreal

At a recent meeting of the executive committee of the Quebec Safety League it was reported that systematic weekly instruction on accident prevention and safety-first methods was to be introduced into schools of Montreal and district. Approval of both Catholic and Protestant school boards of Montreal had been given, and a definite syllabus of instruction was under preparation.

The chairman of the Catholic School Safety Committee announced that a safety manual was being prepared in French and English for the use of teachers in the Catholic schools of Montreal. This manual will contain a series of safety talks, and matter for compositions, essays graded for the different classes and ages of pupils.

The chairman of the Protestant School Safety Committee informed the meeting that the Protestant Board of School Commissioners of Montreal had approved recommendations passed at meetings of principals in regard to safety instruction for pupils as follows:—(1) That safety teaching in the schools of the board shall be known and referred to as "accident prevention"; (2) that a definite syllabus of instruction be formulated and taken in each class as soon as possible; (3) that accident prevention be made a topic of discussion and instruction for not less than five minutes, and not more than ten minutes each week; (4) that circular letters setting forth the objective of the schools in safety instruction, and asking for the sympathetic support of parents, be sent to the homes of the school children.

The manual of instruction being prepared for use in all schools, provides uniform guidance to the classes, and will enable the teachers and pupils to get as much as possible out of the time allotted for the subject. Danger pointers are to be clearly outlined for remembrance of pupils in all phases of their lives, so that accident prevention may be scientifically and intelligently grappled with at the outset; there will also be information on how to render first aid treatment in the event of accidents.

Proposed Safety Pledge

The "Industrial Accident Prevention Association" of Ontario has sent out to the members a leaflet, containing a "safety pledge," which, it is suggested, should be taken by them. The pledge is as follows:—

"I will help to keep down the accident record of this plant. I realize that if we can work a month without a lost-time accident, we can go two months and more, if everyone helps. I promise to report all small injuries, in order to obtain proper treatment and thus prevent infection, also to be careful at my work and to assist in the prevention of accidents, not only to myself, but to my fellow-employees."

Periodical Plant Inspection

* The Monthly Memorandum issued by the same organization describes another scheme to interest the employees in safety work. It is suggested that employers shall arrange for an inspection of the plant periodically, say every six months, by a committee of the employees, who will report on the condition of the plant and recommend such improvements as in their opinion will prevent accidents. With the Memorandum is issued a "Self-Inspection Form" to be used for the purpose of such a report. One side is arranged for the report, addressed to the manager, while the other is a sort of memorandum to aid in the compilation of the

report. It consists of 10 headings: machinery, objects that cause falls, objects that cause abrasions and bruises, objects that cause injury by falling, objects that cause burns and fires, safe clothing, eye protection, objects that cause suffocation or poisoning, objects that will frequently reduce the seriousness of an accident, objects that will prevent illness.

Under each heading are a few explanatory comments indicating the sort of things that the inspection committee must look out for. For instance, under "Machinery" the document says: "See that machinery is in good working order and properly adjusted; that there are no projecting set screws on moving parts; that there are no unguarded belts, pulleys or gears; that saws and presses are adequately guarded; that all clutches are working properly; that all safety devices are in good working order and being used; that all machinery is properly lighted."

The monthly letter expresses the opinion that such an inspection will be particularly useful as a means of educating employees in plants in Ontario in view of the frequent changes in personnel.

Accident Prevention in Small Factories

Mr. C. B. Auel, president of the National Safety Council, in a recent paper on "accident prevention in a small plant" recommends that safety work be placed under the authority of one man who should take an inventory of the work to be done, principally mechanical safeguarding. It is suggested that regular financial provision be made for safety work. In order to insure that needed inspection of machinery and other equipment takes place regularly and with sufficient frequency, an interesting device of a "safety calendar" is described. Such a calendar would list by groups all items to be inspected, indicating whether inspection is to be continuous, weekly, monthly, quarterly, semi-annually or annually. Departmental and plant safety meetings are considered an essential part of any successful effort to reduce the number of accidents.

Mining Accidents in Ontario

The 23rd annual report of the Ontario Department, contains a section on mining accidents in the province in 1923.

During the year 1923 at the mines, metallurgical works, quarries, and clay, sand, and gravel pits regulated by the Mining Act of Ontario, there were 2,148 accidents reported to the Department up to January 15, 1924. Twenty-eight of these accidents were fatal, resulting in the death of thirty men. Of these thirty fatalities, 17 were in gold mines and mills, 4 in silver mines, 3 in nickel mines and refineries, 3 in iron blast furnaces, 2 in

quarries and 1 in lead mines. Analysed by causes, 25 per cent of the fatalities were due to falls of ground, 16.66 per cent shaft accidents, 20.83 per cent explosives, 25 per cent miscellaneous underground, and 12.50 per cent surface.

Coal Mine Accidents in the United States in 1925

Accidents in the coal-mining industry of the United States in October, 1925, caused a loss of 141 lives among the employees, according to information furnished by state mine inspectors to the United States Bureau of Mines. One man was killed by fall of rock in an anthracite mine; all of the other fatalities occurred at mines producing bituminous coal. The October fatality rate for bituminous mines was 2.63 per million tons as compared with 3.03 for September, and 2.89 for October last year. The output of bituminous coal in October was 53,203,000 tons.

During the first ten months of the current year, the fatality rate per million tons for bituminous mines was 3.26 as compared with 4.12 for the same period last year; the anthracite rate was 6.30 for the present year as against 5.46.

Current records covering "major" disasters, that is, disasters in which five or more lives were lost, show 10 separate accidents with an aggregate loss of 198 lives in 1925 as compared with last year's 10-month record of 9 separate accidents with a total loss of 452 lives. The per-million-ton death rate for both anthracite and bituminous mines based exclusively on these major disasters was 0.41 this year as compared with 0.96 during the first ten months of 1924.

International Safety Investigation

A committee of experts, whose aim is to standardize and improve safety conditions and devices in every country of Europe is assisting the Safety Service of the International Labour Office of the League of Nations and has selected six definite subjects to be investigated and reported. The first investigation will include the manufacture of celluloid goods, including the manufacture and utilization of cinema films; wood working machinery, pressing and stamping machines, centrifugal machines, acetylene plants and methods of using chains and cables.

Safety Codes

The bulletins published within the past year by the United States Bureau of Labour Statistics include a "Safety Code for Mechanical Power-Transmission Apparatus," a

"Safety Code for Laundry Machinery and Operations," and a "Safety Code for Wood-working Plants." The codes are sponsored by the National Association of Mutual Casualty Companies, the Association of Government Labour Officials and employers' associations, and are approved by the American Engineering Standards Committee. On the committee which prepared the laundry code, for example, there participated representatives of laundry owners, laundry employees, manufacturers of laundry machinery, makers of safeguards, and insurance companies.

The City Council of Calgary, Alberta, is co-operating with the St. John Ambulance Association in promoting the study of First Aid among the city employees, recognizing the value of such training particularly for street railwaymen and members of the police and fire departments. It is also proposed to form a class for the members of the City Hall staff. If sufficient interest is shown by the employees the Dier Sparling Company will offer a cup to be competed for by teams picked from the employees of the city.

British Committee of Inquiry into Unemployment Insurance

The Minister of Labour of Great Britain has appointed a committee of inquiry to consider, in the light of experience gained in the working of the Unemployment Insurance Scheme, what changes in the scheme, if any, ought to be made. The Committee is constituted as follows:—Lord Blanesburgh, G.B.E., Chairman; Miss Margaret Bondfield (secretary to the Women's Section of the National Union of General and Municipal Workers); Sir James Curtis (Food Commissioner of the Midland Division from 1917 to 1921, and now Clerk to the Birmingham Board of Guardians); Professor Carless Davis (Regius Professor of Modern History at Oxford University); J. Hamilton (chairman of the York Local Employment Committee); Sir Hugo Hirst (managing director of the General Electric Company); Frank Hodges (secretary of the Miners' International Federation); A. Holmes (secretary of the Printing and Kindred Trades' Federation); Laurence Holt (chairman of the Liverpool Employment Committee and a ship owner); Sir James Lithgow (director of Lithgows, Limited, shipbuilders, and late president of the National Confederation of Employers' Organization); Sir William McIntock (chartered accountant); Sir Glynn Hamilton West (chairman of Sir W. G. Armstrong, Whitworth and Company).

NOTES ON LABOUR UNION ACTIVITIES

President Green in Canada

President William Green, of the American Federation of Labour will pay his first official visit to Canada in January, when he will open the campaign for a more thorough organization of international unions. It will be recalled that the Federation at its recent annual convention (reported in the last issue of the LABOUR GAZETTE) adopted resolutions in favour of an intensive union-label and membership campaign. Preparations to carry out these instructions have been begun in Canada, and in Toronto, for example, preliminary meetings of officials of the various international unions have been held to devise modern methods of attracting wage-earners towards trade unionism. One of the features of the campaign will be labour motion pictures depicting the progress of the Federation.

President Green calls attention to the need of a special effort to secure the organization of female workers. Writing in the *American Federationist* for November he announces that a sustained effort is to be made "to co-ordinate activity and to pool resources for the purpose of enrolling women under the banner of trade unionism. . . . The trade union movement believes that men and women employed in industries should be organized alike, and the small number of organized women is irrefutable proof that special attention must be given to organizing them."

Proposed Labour Legislation in Saskatchewan

Representatives of the Saskatchewan Executive of the Trades and Labour Congress of Canada waited on the Provincial Cabinet during November, to present their proposals in regard to labour legislation at the session of the legislature which opened on December 3. These proposals included an increase in the amount of benefits payable under the Mothers' Allowance Act; the establishment of a general limit of 8-hours for the working day in all industries; that "fair wages schedules" should be posted at all public works while in progress; that the Minimum Wage Act be amended so as to include female employees in beauty parlours.

Representatives of the Firemen's Unions of Regina and Saskatoon presented a request for legislation establishing the two-platoon system for fire fighters in all cities with a population over 10,000 persons.

Brotherhood of Railway Carmen of America

The fifteenth convention of the Brotherhood of Railway Carmen of America was held at Kansas City, Missouri, commencing September 14, President Martin F. Ryan in the chair.

Conditions in Canada.—Vice-President Frank McKenna outlined conditions in Canada as follows:—

"Carmen are organized more effectively and efficiently in Canada than they ever have been in our previous history. This is particularly true of the eastern part of the Dominion. The main shops in that territory are particularly well organized. In fact, the banner lodges of our Brotherhood are established in the city of Montreal. These lodges represent carmen employed on both the Canadian National Railways and the Canadian Pacific. Over four thousand carmen in the city mentioned are enrolled in our Brotherhood. Local Protective Boards operate with enthusiasm and a great deal of intelligence. Both the English and French languages are used in our lodges in the Province of Quebec and good fellowship and toleration are the keynotes of their success.

"In the Maritime Province and in the Province of Ontario, our lodges are always active, our membership being always represented as elsewhere in all central bodies, and on deputations that are often called upon to meet Provincial Governments in connection with legislation affecting the workers of their locality. The same can also be said of our membership in the Province of British Columbia. In these varying connections, Vice-President Beuloin and Deputy-Organizer Brother R. Hewitt have been indefatigable in their efforts.

"In the western part of Canada, a number of our lodges contain 100 per cent of the carmen employed under their jurisdiction, though a few lodges are not so fortunate. In this latter group might be mentioned lodges established in such cities as Winnipeg and Calgary. Difficulties there are traceable to the re-action following the so-called One Big Union revolt of a few years ago. It is gratifying, however, to be able to report that the members we have in such places are not at all discouraged, though sometimes disappointed. Our western membership is steadily increasing and, in the not distant future, we shall be able to report an organization in the west as nearly 100 per cent as is humanly possible.

"For nearly five years, much short time has been worked all over Canadian roads. Staffs have been seriously decreased, but, latterly, there has been some improvement in this connection. Indications point to a gradual and possibly a continuous improvement. Train Mileage on the railways referred to is gradually increasing and with an increase in train mileage, there will follow a more permanent increase in working hours and in the number of carmen employed. The reduced earning powers of our membership has made it difficult for some lodges to carry on, they being in the habit of keeping members in good standing who, for varying reasons, are financially embarrassed. This faith and trust has been, in the main, justified, though occasionally a few defaulters are brought to our notice. Officers conducting the affairs of our locals have proved themselves worthy of every commendation. The same can be said of the large number of members who have stood loyally by them. Especial reference is made to this happy condition for the reason that the last few years have proven the most difficult in our history. This being so during such a difficult period, we shall do better than ever in every direction with a return to so-called normal volume of traffic.

"Our membership continues to demonstrate an ever increasing interest in all matters that affect the welfare of themselves and their families. Many of our members occupy seats on Aldermanic Councils in many cities within the Dominion, and at least one of our members is a member of the Federal Parliament in Ottawa. All these things are a source of much gratification to our general membership and indicate an ever growing interest in all matters that go to increase the sum of human happiness, or *vice versa*.

"For many years our organization in Canada was seriously handicapped through a lack of central headquarters through which Canadian affairs could be handled. Eventually General President Ryan and the General Executive Board, realizing our need in this connection, established for the use of our Canadian membership an office in Montreal. The office has become well known and appreciated in the Canadian Labour movements and Labour delegates from abroad."

Method of Handling Grievances.—President Ryan in his opening address, explained that Division No. 4, Railway Employees' Department, of the American Federation of Labour was the agency through which the affairs of the union are handled in Canada. The present schedule in Canada is known as Wage Agreement No. 6, and is an agreement between Division No. 4 and the Railway Association of Canada (formerly the Railway

War Board). The president gave an outline of the procedure in connection with the joint settlement of grievances (reference to this method of conciliation was made in the last issue of the LABOUR GAZETTE, page 1054).

"If our membership on any railway specified in the agreement failed to agree with the management of the railroad on which they are employed on the meaning of anything within the agreement, a conference is arranged with the Railway Association. That association delegates six railroad officials to represent all the railroads involved who confer with an equal number representing Division No. 4. The latter are usually the officers of Division and members of the Executive Board. The matter under dispute is reviewed and a decision rendered. The discussions are of a candid character, all present constituting themselves as a sort of a jury, and the decision, when rendered, is in accordance with the joint opinion of the meaning of the rule or rules under dispute. Occasionally matters before the conference are somewhat apart from a schedule rule, but on which a decision must be made in the interest of the contending parties; the joint committee comprising the conference then selects one of their number to act as umpire or judge; my information is that frequently the one selected is a representative of Division No. 4, the remainder are the jury. Someone is selected to represent the employee or employees involved and a railroad officer is selected to represent the employing railroad. They appear as pleaders for their respective constituents and introduce their evidence, after which the presiding officer and jury render a decision. No outsider, as in the case of our United States Railroad Labour Board, is permitted to take any part in these deliberations and decisions rendered are accepted by contending parties. Up to date this method of settling disputes has given reasonable satisfaction and it is the general desire to continue this plan indefinitely.

"It is the opinion of our representatives in Canada that the existence of the Railway Association and of Division No. 4 gives our respective System Federations and Joint Protective Boards far greater prestige than they previously enjoyed. All railway managements understand that there is a court of appeals for these federations in the event of any road trying to misinterpret the intent and purpose of existing agreements."

Group Insurance.—The executive was instructed to investigate group insurance plans in order to ascertain which of them would best meet the needs of the union, and to refer the same to a referendum vote of the members. The convention condemned the

plan of group insurance by large corporations as being directed against the interest of unionism.

Resolutions.—Resolutions were passed by the convention as follows:—

Favouring the establishment by the union of scholarships at the trade union educational college at Brookwood, Katonah, N.Y.

Favouring one minimum rate pay for all carmen mechanics.

Asking the Senate of the United States to bring the question of a World Court to a record vote at the earliest possible date.

Favouring union management co-operation, and its extension to all railroads on the continent.

Approving the "Howard-Barkley" bill, or Railway Labour Act (for the settlement of disputes between carriers and their employees).

Giving the support of the union to the Trade Union Life Insurance Company.

Requesting President Ryan and Vice-President McKenna, already appointed for this purpose by the Trades and Labour Congress of Canada, to attend the next meeting of the British Trades Union Congress, and to make a survey of wages and working conditions in the transportation industry in Great Britain.

The following officers were elected for the ensuing term:—

General President, Martin F. Ryan.

Assistant General President, F. H. Knight.

Vice-Presidents, Frank McKenna, John

H. Spelts, Frank Paquin, J. F. McCreery,

Louis Beauloin, D. J. Collins, Irwin

Barney, S. L. Watts, A. J. Burger, and

J. M. Patterson.

General Executive Board members, John Johnson, J. S. Wilds, Chas. E. Whitlow, John Seabolt and Thomas Broad.

Ontario Federation of Barbers

The tenth annual convention of the Ontario Federation of Barbers was held on November 2, 1925, at Hamilton, Ontario, with delegates from Toronto, Ottawa, Hamilton, Peterboro, Brockville, London, St. Catharines, Windsor, Galt, Guelph, Sarnia, Brantford, Niagara Falls and several other cities in attendance. Several of the large cities were represented by two delegates.

Dominion Federation.—The convention supported the tentative "Dominion Federation of Journeymen Barbers," composed of local unions affiliated with the Journeymen Barbers' International Union. The Dominion organization was first suggested at the International convention held at Indianapolis last year. Through the new federation the local unions of Canada are expected to develop a closer

relationship than now exists and to bring about a better understanding in the barbering profession. Conventions of the Dominion Federation will be called by referendum of the affiliated locals at least once every five years, simultaneously with the International Convention, the same delegates officiating at both conventions.

Resolutions.—Among the resolutions adopted by the convention were the following:—

Calling on the Ontario Government to enact a license and sanitary law to govern barbers and barber shops, defining what constitutes a barber and the qualifications necessary to practise the profession of barber.

Calling upon the Federal Government to take necessary steps and provide relief for the unemployed during the coming winter. The resolution suggested that a conference to be immediately called by the Federal Government with the premiers of the various provinces and the representative of Labour, as well as that of Capital with a view of finding a solution to the unemployed problem and not to wait until winter is half over and then offer excuses.

Calling upon the local health officers to assist in cleaning up the "hog-pen" barber shops which are thriving at the expense of the public.

Calling upon the general membership of the Federation and on the master barbers to write to their representatives in the provincial legislature urging them to support a license and sanitary law for barbers and barber shops.

Calling upon the members to vote in the affirmative on the referendum to be held by the International Union in reference to a proposal that the International should institute, operate and maintain technical schools throughout United States and Canada wherein the many branches of the barbering profession can be scientifically taught. This resolution was favoured unanimously and in the debate as to the merits of these technical schools, the present day "college" came in for severe criticism.

Calling upon the International Union to change section 64 of the constitution amending the "three-years' apprenticeship" to read "two years for barbers and six months for hair-dressers, marcellers and wavers."

Calling upon the barbers to support union labels of all trades.

Calling upon the local unions in the various provinces to continue yearly conventions in the interest of the organization and legislation.

Opposing old age pensions as proposed by the International Union. Also opposed to a home for aged members. Both propositions were debated as impracticable.

The following officers as selected by the delegates at the convention at Indianapolis were approved:—

Dominion president, Leon Worthall, Toronto; provincial vice-presidents—Ontario, H. Gainey, Peterborough; Quebec, Z. DiMuro, Montreal; Saskatchewan, J. Vanstone, Regina; Alberta, L. A. Lemna, Medicine Hat; British Columbia, G. A. Yorkstone, New Westminster; secretary-treasurer, A. Call, St. Catharines.

The following provincial executive for Ontario was also elected: Legislative agent and chairman, Leon Worthall, Toronto; first vice-president, Thomas McPherson, Guelph; second vice-president, E. A. Armour, Hamilton; third vice-president, H. Henry, Windsor; fourth vice-president, George Lewis, Toronto. The next provincial convention will be held in Toronto, date to be set by the provincial executive.

Trade Union Membership in Great Britain

The British *Ministry of Labour Gazette* for November contains statistical tables showing the membership of trade unions in Great Britain and Northern Ireland at the end of 1924, based on information collected by the Chief Registrar for Friendly Societies, and by the Registrar of Friendly Societies for Northern Ireland, from trade unions registered under the Trade Union Acts, and by the Ministry of Labour from unregistered unions. They relate to all organisations of employees, including those of salaried and professional workers, as well as those of manual wage earners, which include among their functions that of negotiating with employers with the object of regulating the conditions of employment of their members.

(The number of members in the various groups of unions affiliated with the Trades Union Congress was given in the *LABOUR GAZETTE* for October, page 1006).

The total membership at the end of 1924 was approximately 5,531,000, as compared with 5,410,000 at the end of 1923, showing an increase of 121,000 or 2.2 per cent, the first increase since 1920. The number of male members was about 4,720,000, showing an increase of 123,000 or 2.7 per cent as compared with the previous year, and the number of female members was 811,000 showing a decrease of 2,000 or 0.2 per cent. The total of 5,531,000 includes about 30,000 members in Irish Free State branches, and 31,000 members in other overseas branches of certain unions (compared with 29,000 in Irish Free State branches and 65,000 in other overseas branches, in the previous year). It also includes a number of persons (principally teachers) who are members of more than one society, and are therefore counted more than

once in the figures. When allowance is made for these cases the net number of members in Great Britain and Northern Ireland is estimated to have been 5,450,000 at the end of 1924, as compared with about 5,300,000 at the end of 1923. Of this total, approximately 85,000 was the membership of societies or branches of societies in Northern Ireland. There was a considerable increase in "general labour," and there were also large increases in other transport (65,000, or 18 per cent), mining and quarrying (45,000 or 5 per cent), railway service (28,000 or 6 per cent), and builders' labourers (11,000 or 23 per cent). A decrease of 29,000 in the carpenters and joiners' group was entirely in its overseas membership.

The metal engineering and shipbuilding group showed a decrease of 32,000 or 5 per cent, and the group of agricultural, etc., workers a decrease of 18,000 or 23 per cent.

While the total membership of all groups showed an increase of nearly 3 per cent in 1924, the total female membership showed very little change. The female membership of the cotton group, however, which had sustained a heavy reduction during 1923, remained practically unaltered at the end of 1924. In the wool, worsted and shoddy group, and in the hosiery group, the female membership decreased by about 5 per cent.

International Trade Union Library

The International Federation of Trade Unions, with headquarters in Amsterdam, has undertaken the publication of a series of short histories of the trade union movement in various countries, to be known as "The International Trade Union Library." The first volume in this library, which has just been issued, is entitled "The Trade Union Movement in Belgium." It has been prepared by Mr. C. Mertens, General Secretary of the Belgian Trade Union Commission. As is well known, the organisation of trade unions differs widely from one country to another. The publication of this series will therefore render a useful service to those who are desirous of knowing more about trade unionism in other countries. "The Trade Union Movement in Belgium" describes the history of the movement, its struggles and successes, from the beginning of the movement to the present day, including an account of the constitution of the Belgian Trade Union Commission, which corresponds in Belgium to the British Trade Union Congress.

Railway Clerks and A. F. of L.

The decision of the American Federation of Labour in the jurisdictional dispute between

the Brotherhood of Railway Clerks and the Brotherhood of Teamsters was noted in the last issue of the LABOUR GAZETTE (page 1083). The Railway Clerks will hold a meeting on January 18 at Cleveland to decide whether they will surrender their charter within 90 days, the limit fixed by the Federation, or obey the decision and surrender to the Teamsters' Brotherhood the teamsters and chauffeurs now included in the Clerks' organization. The decision will be made by the railway clerks' grand executive council and its 200 general chairmen, who have been called to meet jointly two days before the expiration of the ultimatum.

The jurisdictional dispute between the two brotherhoods has existed for many years. Both contend that the teamsters and chauffeurs employed by express companies to haul goods to and from railway stations should be affiliated with their organization.

Effect of Jurisdictional Disputes

The Honourable James J. Davis, United States Secretary of Labour, in a recent ad-

dress to the National Board for Jurisdictional Awards in the Building Industry said: "Only the building trades are directly affected by these so-called jurisdictional disputes, but I know of nothing that has done more to hurt labour in general. In talking with the head of a great manufacturing enterprise as to why his labour was not organized, he said to me, 'We have more classifications in our industry than there are in the building trades, and if we were dealing with the several unions their jurisdictional disputes would ruin our business. In the building industry losses of that kind can be taken care of by directly taxing the people by increasing rents, and so on. But our competition is keen, and we have no way of making up losses that might result from jurisdictional disputes, and we can not take any such chances.' You see the bad effects of these disputes do not end with the building trades but reach out into other industries. In the long run they come right back and injure unionism itself."

Labour Conditions in China

The *Chinese Economic Bulletin*, for August 22, 1925, gives the following information on labour conditions in Tsinan, in the Province of Shantung, China, a city which is stated to be rapidly becoming industrialized.

At present there are about 40 industrial establishments which can claim to be more or less modern factories. These undertakings include nine flour mills employing from 60 to 120 persons, two match factories employing about 1,500 workers, one cotton mill employing 3,000 workers, and several hair-net factories employing about 3,000 people. Other factories, such as sugar, paper, iron and brass goods, soap, dye, leather, needles, cement, wine, cloth factories, etc., employ a total of about 10,000 workers.

Women and children are stated to be employed by only a few concerns, but these include the hair-net factories, cotton mills, and the needle and match factories, which together account for something like half the total factory workers employed.

Most of the factories are under Chinese management. The majority of the workers live in the factories where they are employed. Some of the factory buildings are well lighted and ventilated; a few are not. Some factories provide medical care in case of sickness. The majority of the factory workers are stated to work an eleven or twelve-hour day; a few have a ten-hour day. Wages vary from two dollars a month for unskilled child labour to

20 dollars for skilled labour. The estimated cost of living is placed at about 7.50 dollars a month for a single worker and 15 dollars for a family of five. Rents vary from 0.80 to 3 dollars a room per month, and the workers as a whole can only afford to live in crowded quarters.

In addition to the factory workers, who account for only one-sixteenth of the working population of Tsinan between the ages of 15 and 50 years, there are stated to be 10,000 rich men, 5,000 wheelbarrow men, 30,000 workers in shops which mainly sell goods, and probably as many more in the shops which chiefly make goods, 70,000 or more girls and women who work at home, and an unestimated number in the smaller occupational groups.

At the close of the year approximately 16,000 employees of the Standard Oil Company, New Jersey, will obtain full title to some 900,000 shares of the company's common stock, purchased under the company's partial-payment plan, inaugurated about five years ago, which is expected to be extended for another three years. This stock represents nearly 5 per cent of the total common stock, and has a current value of about \$40,000,000. Taken as a group, the employees will rank second to John D. Rockefeller Junior, as the largest holders of the corporation's stock.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Proceedings of the Seventh Conference

THE International Labour Office has just published the Proceedings of the Seventh Session of the International Labour Conference (Geneva, 1925). Printed in English and French in parallel columns, the documents comprise the letters of convocation, the list of delegations, committees, officers, etc., verbatim reports of the plenary sittings, texts of reports of committees, texts of resolutions, Draft Conventions and Recommendations adopted by the Conference, and the report of the Director of the Office to the Conference. The publication consists of two foolscap volumes of 1,450 pages, including a full index and a bibliography of the International Labour Organization.

The agenda of this Conference included the following subjects: workmen's compensation; equality of treatment for national and foreign workers as regards workmen's compensation for accidents and prohibition of night work in bakeries.

An article dealing with the proceedings of this Conference and including the full texts of the Draft Conventions and Recommendations appeared in the July issue of the *LABOUR GAZETTE*, pp. 695-710.

Compensation for Occupational Diseases

Another volume just published by the International Labour Office is "Compensation for Occupational Diseases," one of the technical reports submitted in proof to the Seventh Session of the Conference. It contains a study of the general problems of compensation for occupational diseases and an analysis of national laws bearing on the subject. The scope of the report has been limited to the problems peculiar to occupational diseases—nature of risk, definition of occupational disease, responsibility of employers, etc., as it has not been considered necessary to reproduce the provisions relating to the amount and nature of benefits, insurance institutions and judicial authorities, which have been described in the reports already published on compensation for industrial accidents and on sickness insurance.

Meeting of the Governing Body

A meeting of the Governing Body of the International Labour Office will be held in Warsaw, Poland, opening on January. This meeting is being held in Warsaw on the invitation of the Government of Poland.

Dr. W. A. Riddell, League of Nations Advisory Officer in Geneva, has been appointed

to attend this meeting on behalf of the Government of Canada.

Turkish Labour Code

The interest of the Turkish Government in labour matters is evinced by a Bill which has been submitted to the National Assembly at Angora for the enactment of a complete labour code. The measure in question had previously been approved by the Turkish council of ministers and is applicable to employers and workers in both public and private establishments of all kinds.

In addition to provisions for the registration of industrial establishments, with particulars of the number of workers employed and the general conditions under which they work, the Bill contains several proposals of a notable character. It prohibits the employment of children under twelve in any industry, and the employment of young persons under eighteen in the mining industry. It prescribes a maximum working day of ten hours, including at least one hour's rest, and a maximum week of sixty hours. It limits the hours of work in mines to six a day "bank to bank" and including one hour of rest. It limits overtime and requires that it shall be paid for at "time and a half." It forbids the night work of young persons under seventeen.

Although the Turkish Republic is not a member of the International Labour Organization of the League of Nations, the Government policy referred to above marks a considerable advance on existing Turkish legislation applicable to labour conditions.

Members of the Trades and Labour Council at London, Ontario, recently petitioned the local Board of Education to require that a fair wage clause should be inserted in all future contracts for building and other work. The Board suggested that the Trades and Labour Council should bring this matter before next year's Board.

The Alberta Coal Commission is understood to have practically completed its work, and will shortly issue a report on the conclusions reached. The Commission was appointed in October, 1924, in conformity with a resolution passed by the legislature at the session of that year, calling for a thorough inquiry into the industry in the Province. The constitution and terms of reference of the Commission were noted in the March issue of the *LABOUR GAZETTE*.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF NOVEMBER, 1925, AS REPORTED BY EMPLOYERS TO THE DOMINION BUREAU OF STATISTICS

EMPLOYMENT on November 1 showed a seasonal decline that rather exceeded the losses recorded on the same date of last year; since the improvement reported in recent months, however, has been more marked than it was in 1924, the situation is better than in November of that year. Statements were received from 5,876 employers, whose payrolls aggregated 797,790, as compared with 807,371 on October 1. The index number declined from 98.3 on that date to 97.1 at the beginning of November, as compared with 93.0, 98.8, 95.8 and 90.2 on November 1, 1924, 1923, 1922 and 1921, respectively. Construction, lumber mills and canneries registered pronounced seasonal reductions; the losses in construction, which following a very active season, were unusually heavy for the time of year, were probably accelerated by the inclement weather that prevailed at the beginning of November.

The course of employment since 1923 is depicted in the accompanying chart. It will be noted that the curve of employment is higher than at the same time in 1924, although it continues to be a little lower than in 1923.

Employment by Provinces

All provinces shared in the downward movement, but Quebec showed the greatest absolute decline.

Maritime Provinces.—Saw-mills reported considerable seasonal curtailment and there were moderate decreases in transportation and railway construction. On the other hand, rolling mills, trade and highway construction were more active. The result was a decline of 1,899 persons in the staffs of the 519 firms making returns, who had 63,386 employees on November 1. Slightly greater activity than at the same time last year was reported in the Maritime Provinces, the reductions then having been over twice as large.

Quebec.—Employment in Quebec showed the first contraction to be indicated since the beginning of the year; losses in lumber mills and some other branches of manufacturing and in construction accounted for the decline, while logging camps, shipping and stevedoring and trade recorded important improvement. The working forces of the 1,247 employers reporting aggregated 221,596 persons, or 3,006 less than in the preceding month. Although these reductions exceeded those registered on November 1, 1924, the index on the date under review is higher.

Ontario.—Heavy seasonal losses in lumber and canning factories and in construction in Ontario were partly offset by large increases in logging, trade, steam railway operation and in textile works and some other manufactures. The gains in bush operations were also seasonal in character. Employment continues to be much better than at the same time of last year, when very much more extensive decreases were reported. Statistics were tabulated from 2,705 firms, having 332,892 persons in their employ, as compared with 334,557 on October 1, 1925.

Prairie Provinces.—There was a rather small reduction in the payrolls of the 752 employers making returns in the Prairie Provinces, who reported 105,064 workers, or 731 less than in their last report. This decline is in contrast with the increases that were indicated on November 1, 1924; the index number then, however, was several points lower. Logging, mining, and trade were decidedly busier on the date under review than in October, 1925, but there were losses in manufacturing, construction, services and railway operation.

British Columbia.—This province registered the first general curtailment of operations shown since the beginning of January of this year; 653 firms reduced their payrolls from 77,132 persons on October 1 to 74,852 on November 1. Losses were reported in fish, fruit and vegetable canneries, lumber mills and tin can factories, highway and railway construction, but there were pronounced gains in logging and smaller increases in metallic ore mines. Somewhat smaller decreases were noted at the beginning of November last year, when the situation was much less favourable.

The following table gives index numbers of employment in the five economic areas into which the country is divided in these statistics:—

TABLE I.—EMPLOYMENT BY ECONOMIC AREAS.
(Number employed by the reporting firms in January 1920 = 100)

District	Relative weight	Nov. 1, 1925	Oct. 1, 1925	Nov. 1, 1924	Nov. 1, 1923	Nov. 1, 1922	Nov. 1, 1921
Maritime Provinces	7.9	85.1	88.1	83.7	95.2	91.7	91.4
Quebec.....	27.8	101.1	102.7	97.1	103.2	92.7	87.5
Ontario.....	41.7	93.7	94.3	90.4	96.0	94.9	87.0
Prairie Provinces	13.2	99.1	99.8	94.1	99.2	105.0	102.6
British Columbia	9.4	111.5	114.8	102.1	102.3	100.2	94.3
Canada.	100.	97.1	98.3	93.0	98.8	95.8	90.2

Employment by Cities

Of the eight cities for which separate tabulations are made, only two—Montreal and Winnipeg—registered increases, while in Toronto the situation was unchanged and in Quebec, Ottawa, Hamilton, Windsor and the other Border Cities and Vancouver there was curtailment.

Montreal.—Employment in Montreal showed a further, though slight gain; shipping and stevedoring and trade recorded marked improvement, which was largely offset by declines in manufacturing and construction. Statements were received from 678 firms, having 112,586 persons on payroll, compared with 112,484 on October 1. Conditions are much more favourable than at the beginning of November 1924, when there were considerable losses.

Quebec.—Manufacturing and transportation were slacker, while building made rather small gains. The working force of the 85 employers reporting aggregated 8,277 persons, as against 8,447 in the preceding month.

Toronto.—No general change was noted in Toronto, where 771 firms employed 96,511 persons, or nine less than at the beginning of October. Trade was decidedly more active; construction was seasonally dull and employment in manufacturing remained practically the same. Extensive gains were registered on November 1 of last year, but the index number then was slightly lower.

Ottawa.—According to returns from 124 employers in Ottawa, they reduced their staffs by 456 persons to 10,153 at the beginning of November. Lumber mills, construction and services afforded less employment, while trade reported improvement. Decreases on a rather larger scale were indicated at the same time last year.

Hamilton.—Construction showed a moderate seasonal contraction, while little change on the whole took place in other groups. A combined pay-roll of 26,728 persons was employed by the 198 firms making returns, who had 26,908 workers in the preceding month. Employment had also declined on November 1, 1924, when the index number was several points lower.

Windsor and other Border Cities.—Iron and steel and stone works in the Border Cities afforded less employment. Statistics received from 81 employers showed that their staffs stood at 10,211, as compared with 10,424 on October 1.

Winnipeg.—Continued improvement was noted in Winnipeg, where manufacturing and trade were busier, the latter in particular, showing substantial improvement. Statements were tabulated from 284 firms, having

25,804 employees; this was 806 more than in their last report. Considerable losses were registered at the same time last year, and employment then was in less volume.

Vancouver.—The trend of employment in Vancouver was downward, chiefly on account of seasonal losses in lumber, canning and tin can factories. Shipping and stevedoring and construction, on the other hand, were slightly more active. The 236 firms reporting had 24,523 employees, as compared with 25,100 at the beginning of October. Although the reductions recorded on November 1, 1924, were smaller, the index number then was much lower than on the date under review.

The following table gives index numbers of employment by cities. The column headed "Relative Weight" in this table shows the proportion that the number of employees reported in each of the indicated cities bears to the total number of employees reported in Canada by the firms making returns on November 1, 1925.

TABLE II—EMPLOYMENT BY CITIES.

City	Relative weight	Nov. 1, 1925	Oct. 1, 1925	Nov. 1, 1924	Nov. 1, 1923	Nov. 1, 1922
Montreal.....	14.1	99.3	99.4	92.4	99.1	92.6
Quebec.....	1.0	99.4	100.3	100.3
Toronto.....	12.1	89.7	89.8	87.0	89.8	92.2
Ottawa.....	1.3	96.8	101.8	94.5	103.8	100.6
Hamilton.....	3.4	87.7	88.3	79.6	89.7	88.4
Windsor.....	1.3	92.9	94.8
Winnipeg.....	3.2	92.5	89.4	84.2	88.6	99.5
Vancouver.....	3.1	112.0	113.9	103.4	98.6	94.9

Manufacturing Industries

The feature of the situation in the manufacturing industries was the pronounced seasonal contraction in lumber mills, fruit and vegetable canneries. Rubber, fish preserving, iron and steel, non-ferrous metal, mineral product and pulp and paper factories also recorded reductions in personnel. On the other hand, the textile, electrical apparatus, leather and musical instrument divisions registered improvement. The curtailment indicated on November 1, 1925, was more extensive than at the same time of last year, but the index number then was lower. Statements for the date under review were tabulated from 3,809 manufacturers, having 438,281 operatives, as compared with 448,053 in the preceding month.

Animal Products, Edible.—Fish canning, smoking and curing plants released a considerable number of workers, as is customary at the end of the season, while meat slaughtering and preserving establishments recorded increased activity. The reductions were very largely reported in British Columbia and the increases in Ontario and the Prairie Provinces.

The 169 firms making returns had 15,263 persons in their employ as compared with 15,433 on October 1. The shrinkage is much less than on November 1, 1924, when the index number was several points lower.

Leather and Products.—Further though slight improvement was noted in the leather group, chiefly in Ontario and Quebec. A combined working force of 16,534 persons was reported by the 194 manufacturers making returns, who had 16,368 employees in the preceding month. Employment in leather is on practically the same level as on November 1, 1924.

employers reporting, who had 29,256 workers on November 1. The bulk of the contractions were in Ontario and British Columbia. At the beginning of November of last year, there were somewhat smaller losses, but the situation then was less favourable.

Pulp and Paper.—There was a moderate decline in employment in pulp and paper mills, while printing and publishing establishments recorded slightly greater activity. The result was a reduction of 200 persons in the staffs of the 457 manufacturers making returns, who employed 52,403 workers. Quebec firms reported most of the shrinkage. Conditions are

Lumber and Products.—Rough and dressed lumber mills recorded large seasonal reductions, while there was moderate improvement in furniture and wooden vehicle plants. There was a net decline of 6,279 persons in the staffs of the 723 firms whose statistics were received, and who employed 49,617 workers. All provinces shares in the losses, which were on a smaller scale than on the same date of last year. The index number then was several points lower than on November 1, 1925.

Musical Instruments.—Continued increases in employment were reported in musical instrument works, 39 of which enlarged their working force from 2,954 on October 1 to 3,087 at the beginning of November. The improvement took place largely in Quebec. Additions to pay-roll of practically the same size were noted on November 1, 1924, when the index number was slightly lower.

Plant Products, Edible.—Pronounced reductions were recorded in fruit and vegetable canneries, indicating the completion of the season's work in many establishments. Biscuit factories also laid off employees, but the sugar refining, chocolate, confectionery, flour, cereal, starch and glucose divisions increased their working forces. The result was a decline of 2,583 persons in the staffs of the 322

better than on November 1, 1924, when the losses indicated affected over twice as many workers.

Rubber Products.—Employment in rubber factories showed the first falling off that has been recorded since the beginning of this year; 549 persons were laid off by the thirty firms reporting. They employed 12,584 workers. The reduction was partly due to a temporary shutdown in a large footwear mill in Quebec, to which alterations were being made. Although additions to staff were registered on November 1, 1924, the situation then was much less favourable.

Textiles.—Varying conditions in different divisions of the textile group produced a net increase of 726 in the working force of the 509 manufacturers making returns, whose staffs stood at 69,452. Cotton, hosiery and knit goods and miscellaneous textile mills increased their working forces, but garment, personal furnishing and headwear factories were slacker. The improvement took place mainly in Ontario. Expansion on a rather smaller scale was noted at the same time last year, and the index number then was about five points lower.

Tobacco, distilled and malt liquors.—This group showed moderate curtailment in Quebec

and the Prairie Provinces. Statistics were received from 102 plants, employing 11,983 workers, as compared with 12,103 in the preceding month. The index number was slightly higher than on November 1, 1924, when practically no change in the situation was shown.

Electric Current.—Further though smaller reductions were made in electric current plants, 87 of which decreased their payrolls from 12,291 on October 1 to 12,105 at the beginning of November. This contraction caused employment to be slightly below its

level on the same date last year, moderate improvement having been indicated at that time.

Electrical Apparatus.—Employment in electrical apparatus factories made a further gain, that repeats the movement shown on November 1, 1924, and is partly indicative of activity for the Christmas trade. The index number this year was higher than in 1924. The 37 manufacturers reporting increased their working force by 217 persons to 9,552 on the date under review. Ontario registered practically all the increase.

TABLE III—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES. (Jan. 1920 = 100)

Industry	* Relative weight	Nov. 1, 1925	Oct. 1, 1925	Nov. 1, 1924	Nov. 1, 1923	Nov. 1, 1922	Nov. 1, 1921
Manufacturing	55.0	89.2	91.3	84.2	91.2	87.7	81.1
Animal products—edible.....	1.9	98.9	100.5	92.3	87.2	92.2	89.4

All industries.....	100.0	97.1	98.3	93.0	98.8	95.8	90.2

* For explanation of the term "relative weight see note on page 4.

Iron and Steel.—A moderate decline was registered in the iron and steel industries at the beginning of November. Although activity had increased on the same date of 1924, the situation then was less favourable than it was in 1925. Statements were tabulated from 644 iron and steel establishments employing 114,575 persons as compared with 114,954 on October 1. There were minor declines in all except the Maritime Provinces, where rolling mills showed improvement. Agricultural implement, wire, sheet metal and machine shops and foundries also recorded heightened activity while automobile, railway car, ship-building, general machinery and boiler, engine and tank works released employees.

Non-Ferrous Metal Products.—Smelters and refineries and precious metal plants were rather busier, but tin can and other works making lead, tin, zinc and copper products released employees. An aggregate payroll of 11,466 persons was employed by the 102 firms who made returns in this group. Practically all the curtailment was in British Columbia, while elsewhere the changes were slight. The index number was several points higher than at the same time last year.

Mineral Products.—Seventy-five manufacturers of mineral products reported that they employed 9,893 persons, or 215 less than on October 1. Gas and petroleum plants in Quebec and Ontario recorded the bulk of the shrinkage. Contractions affecting practically the same number of persons were indicated on November 1, 1924.

Logging

Continued seasonal gains were reported in logging camps, to which 6,882 persons were despatched during the month ending November 1. The 224 firms reporting had 26,384 employees. Increased activity was noted in all provinces except New Brunswick, but the gains in Ontario were most extensive. Somewhat larger additions to staffs were made on the corresponding date of 1924, and the index number then was slightly higher.

Mining

Coal.—Further seasonal improvement was noted in the Western coal fields at the beginning of November; the 90 operators making returns increased their staffs from 24,567 persons on October 1 to 25,268 on the date under review. A slightly larger expansion was indicated on November 1 in the preceding year, but the index number then was a few points higher.

Metallic Ores.—This industry afforded more employment on November 1 than on October 1, according to 45 firms employing 13,354 persons, as against 13,132 on the latter date.

Practically the entire gain was in British Columbia. Very little change in the situation was shown at the beginning of November a year ago; the index number then, however, was slightly above its present level.

Non-Metallic Minerals, other than Coal.—Employment in quarries generally showed a falling off; 436 persons were released from the staffs of the 71 firms reporting, who employed 6,339 workers. The situation is rather better than at the same time last year, although the curtailment then was not so extensive.

Communication

Telegraphs and telephones registered slightly less activity, the former showing larger losses than the latter. Statements were compiled from 180 companies, whose payrolls stood at 23,564, as compared with 23,723 in the preceding month.

Transportation

Street Railways and Cartage.—Reductions in employment were reported in this group, chiefly in Quebec and Ontario. The working force of the 115 employers whose returns were received, aggregated 19,734 as compared with 20,162 on October 1. The staffs indicated were practically the same size as on November 1, 1924.

Steam Railways.—The trend of employment on steam railway operation was downward after five months of uninterrupted expansion. In Quebec and the Prairie Provinces there were comparatively large declines, while improvement was noted in Ontario. Reports were tabulated from 102 employers having 77,168 employees, or 420 less than on October 1. Increased personnel was indicated on November 1, 1924, but the index number then was very slightly lower.

Shipping and Stevedoring.—Continued improvement was noted in shipping in Quebec. The payrolls of the 59 employers reporting rose from 14,990 on October 1 to 16,067 persons on November 1. Employment was in greater volume than at the same time last year, when, in one of the fluctuations that constantly take place in this industry, there was a considerable decline in activity.

Construction and Maintenance

Building.—The first reduction in employment to be recorded since February was shown in building construction on November 1, when the 303 contractors reporting decreased their payrolls by 1,605 persons to 26,789. There were contractions in Quebec, Ontario and the Prairie Provinces, while elsewhere little change was indicated. This shrinkage affected a greater number of workers than did the losses registered on the same date

of last year; the index number stood at 140.7, as compared with 130.8 in 1924.

Highway.—Employment on highways continued to diminish, repeating the downward movement indicated at the same time in previous years. The largest decreases were in Quebec and Ontario, but there was also a falling off in the Prairie Provinces and British Columbia. An aggregate working force of 15,915 persons was employed by the 119 highway contractors making returns, who had 18,305 workers on October 1.

Railway.—The number of men employed on railway construction and maintenance declined by 4,006 to 36,496 on November 1, according to 38 employers in this division. The most marked losses were in Quebec and Ontario, but employment showed a downward tendency in all provinces. Approximately the same sized reduction was noted on November 1, 1924, and the index number then was only slightly below its present level.

Services

Hotels and restaurants, mainly in summer resorts, continued to release employees, while other divisions of the service group showed no general change. Statistics were compiled from 164 employers having 13,552 employees,

as against 14,635 in the preceding month. The bulk of the losses took place in the Prairie Provinces, Quebec and Ontario. Although this contraction exceeds that registered on November 1, 1924, the index number is now a little higher.

Trade

Important gains were noted in retail trade on November 1, the additions being the largest indicated on that date any year since the record began in 1920. All provinces shared in the gains, which were largely confined to retail trade. A combined working force of 58,879 persons was employed by the 557 establishments reporting, who had 57,043 employees at the beginning of October. The index stands over six points higher than on November 1 last year.

The accompanying table gives index numbers of employment by industries as at the first of October and November, 1925, as compared with November 1 of the last four years. The columns headed "Relative Weight" in the tables in this article showed the proportion that the number of employees reported in the indicated area or industry bears to the total number of employees reported in Canada by the firms making returns on November 1, 1925.

EMPLOYMENT OFFICE REPORTS FOR OCTOBER, 1925

THE volume of business transacted by the offices of the Employment Service of Canada during the month of October, 1925, showed a decrease of over 46 per cent in the average daily placements from that of the preceding period. This large reduction was due to the seasonal curtailment in the demand for harvest workers in the west, this demand having reached an unusually high level during September of this year, while a gain of over 6 per cent was registered when the records were compared with the average daily placements effected during the corresponding month a year ago.

The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curve of vacancies in relation to applications declined steadily throughout the month, though at the close of the period under review it was four points higher than the level attained at the close of October, 1924, while the curve of placements, though showing a decline during the first half of

the month, rose again during the latter half of the period under review, remaining on a higher level than that reached during the corresponding month a year ago. The ratio of vacancies to each 100 applications was 85.2 and 83.0 during the first and second half of October, in contrast with the ratio of 79.0 and 79.1 during the same period in 1924. The ratio of placements to each 100 applications during the period under review was 77.5 and 79.4, as compared with 73.6 and 71.6 during the corresponding month of last year.

A summary of the reports from the offices showed that the average number of applications reported during the first half of October was 1,924, as compared with 2,349 during the preceding period, and with 1,850 daily during the corresponding period in 1924. Applications for work during the latter half of the month registered 1,801 daily, in contrast with 1,924 during the latter half of October a year ago. Employers notified the Service of a daily average of 1,640 vacancies during the first half, and 1,495 during the latter half of the month under review, as compared with a daily average of 1,462 and 1,522 vacancies during the month of October, 1924. Vacancies offered to the Service during the latter half

of September, 1925, averaged 2,304 daily. The Service effected an average of 1,491 placements during the first half of October, of which 1,070 were in regular employment and 421 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,992 daily, and with 1,362 daily during the first half of the October, 1924. During the latter half of the month under review placements averaged 1,429 daily (1,030 regular and 399 casual), as compared with an average of 1,379 daily during the corresponding period a year ago.

During the month of October, 1925, the offices of the Service referred 40,811 persons to vacancies and effected a total of 39,379 placements. Of these the placements in regular employment were 28,322, of which 24,677 were of men and 3,645 of women, while the placements in casual work totalled 11,057. The number of vacancies reported by employers numbered 32,527 for men and 9,703 for women, a total of 42,230, while applications for work totalled 50,212, of which 39,040 were from men and 11,172 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements		Totals
	Regular	Casual	
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (10 months).....	275,452	91,054	366,506

MARITIME PROVINCES

Orders listed at employment offices in Nova Scotia and New Brunswick during the month of October 1925 were over 23 per cent in excess of the preceding month, but nearly four per cent less than during the corresponding month last year. Gains under both comparisons were reported by New Brunswick offices, while Nova Scotia offices reported losses. Placements by Nova Scotia offices were nearly 11 per cent higher than in September, but about 7 per cent less than in October 1924. New Brunswick offices made over 39 per cent more placements during October than in the preceding month and nearly 3 per cent more than in October 1924. Industrial groups in which most of the placements were effected in Nova Scotia were manufacturing 132, of which 98 were in the iron and steel division; logging 80; construction and maintenance 57; services 178 and trade 70 and in New Brunswick manufacturing

89; logging 114; construction and maintenance 81 and services 576. During the month of October 292 men and 65 women were placed in regular employment through Nova Scotia offices and 200 men and 84 women through offices in New Brunswick.

QUEBEC

Opportunities for employment during October were nearly 22 per cent greater than in September, and over 77 per cent in excess of October 1924. Increased demand for bush workers was mainly responsible for the improvement indicated in the former comparison, while building construction workers were also in greater demand than during October last year. Placements were over 11 per cent higher than in September and more than 52 per cent above October 1924. All industrial groups participated in the gains over October 1924, those in the manufacturing, logging and building groups being the most pronounced. Industrial groups in which most of the placements were effected during the month were manufacturing 143; logging 1,092; transportation 128; construction and maintenance 573, and services 780. Regular employment was secured for 2,125 men and 669 women.

ONTARIO

There was a nominal decline only in the number of orders received by Ontario offices during October when compared with the preceding month, but a gain of nearly 14 per cent over the corresponding month of last year was recorded. Placements were about 5 per cent lower than in September, but nearly 10 per cent higher than during October, 1924. The most important gains over October of last year occurred in manufacturing, farming, transportation and construction and maintenance, offset in part by reduced demand for bush workers. Industrial groups in which employment was secured for most workers were manufacturing 1,719; logging 2,039; farming 1,571; transportation 640; construction and maintenance 2,893; trade 455; and services 3,586, of whom 2,197 were household workers. Placements in regular employment numbered 8,045 of men and 1,264 of women.

MANITOBA

The number of orders received during October was nearly 38 per cent less than in September and over 26 per cent below October 1924. Lessened demand for farm workers owing to an earlier harvest this year was mainly responsible for the reductions under both comparisons, although this was offset somewhat in the latter comparison by an increase in orders for household workers.

The percentage of placements during October was over 21 per cent below September and nearly 2 per cent less than during October, 1924, a reduction in farm placements in the latter comparison being offset by increased placements under services and logging. Nearly all the bush placements were transfers from Winnipeg to lumber camps in the Port Arthur zone. Industrial groups in which most of the placements were effected were manufacturing 207; logging 1,506; farming 1,405;

and trade 138. During the month under review 3,490 men and 278 women were placed in regular employment.

ALBERTA

Opportunities for employment during October were nearly 35 per cent less than in September but over 2 per cent higher than in October of last year. Placements were about 25 per cent below September and over 3 per cent above October, 1924. The earlier harvest

construction and maintenance 287; services 2,320 and trade 286. There were during the month 2,563 placements of men and 569 placements of women in regular employment.

SASKATCHEWAN

During October the number of orders received was about 84 per cent less than during the preceding month, and nearly 13 per cent less than during the corresponding month of last year. Placements were about 83 per cent less than during September and nearly 16 per cent less than during October, 1924. These reductions were almost entirely due to curtailment of farm orders owing to the earlier harvest this year. Bush work, however, commenced earlier and heavy placements were made in the Prince Albert zone. Industrial groups in which employment was secured for most workers were logging 695; farming 2,204; construction and maintenance 675; services 788;

with consequent reduction in farm orders was mainly responsible for the decreased vacancies and placements when compared with the preceding month. The most noteworthy gain over October, 1924, was in construction and maintenance. Industrial groups in which most of the placements were effected were manufacturing 185; logging 300; farming 4,471; mining 376; transportation 113; construction and maintenance 928; services 828 and trade 224. Regular employment was secured for 6,168 men and 424 women during the month under review.

BRITISH COLUMBIA

There was a decrease of nearly 20 per cent in the number of orders received during October when compared with the preceding month, but an increase of over 30 per cent in comparison with October of last year. Placements were over 30 per cent less than in September, but nearly 35 per cent in excess

*10 placements effected by offices since closed.

of October, 1924. The principal reductions from September occurred in the manufacturing of lumber and its products, transportation and construction and maintenance. The most noteworthy increase over October of last year was in the construction and maintenance group with smaller gains in farming, transportation and services. Industrial groups in which most of the placements were effected during the month were manufacturing 440; logging 608; farming 226; transportation 310; construction and maintenance 794; services 1,103 and trade 181. Placements in regular employment numbered 1,794 of men and 292 of women.

Movement of Labour

During October, 1925, the offices of the Employment Service of Canada made 28,322 placements in regular employment, of which 19,593 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 3,924 were granted the Employment Service reduced transportation rate, 2,490 going to points within the same province as the despatching office and 1,434 to other provinces.

The offices in Quebec issued 502 special rate certificates, 315 provincial and 187 interprovincial. The movement was entirely toward the logging camps of Quebec and Northern Ontario, the majority going to points in the vicinity of Sault Ste. Marie and Quebec. In Ontario 867 persons were granted certificates, six of whom were for points outside the province and included five bushmen sent from Pembroke to Hull and one farm worker from Sudbury to Moose Jaw. Seven hundred and forty-three of the provincial transfers were bushmen, 108 were building, highway and railway construction labourers, three were miners, three bricklayers, two stonemasons, and two were farm workers. Manitoba offices issued certificates to 1,134 persons, 119 going to points within the province, and 1,015 going to other provinces. From Winnipeg three hotel workers and three bushmen were sent to Dauphin, one cordwood cutter, one baker, three domestics, and seven hotel workers to Brandon, one housekeeper and four hotel workers to points within the Winnipeg zone, and 65 farm labourers to various districts throughout the province. In addition Brandon transferred 31 bushmen to Dauphin. The interprovincial movement included 1,002 bushmen, one cook, and one hotel worker travelling to Port Arthur, one chambermaid to Estevan,

one kitchen maid to Regina, one farm labourer to Alberta, and eight to Saskatchewan, all of whom were despatched from Winnipeg. Saskatchewan issued 740 certificates, 529 provincial and 211 interprovincial. Of the provincial transfers 394 were bushmen, the majority going to points in the vicinity of Prince Albert, 71 were farm hands, six were miners sent from Regina to Estevan, 22 were teamsters, 16 of whom went from Saskatoon to North Battleford, and the remainder were construction labourers, hotel and household workers. The interprovincial movement included 99 sugar beet workers travelling from Estevan, Moose Jaw, Regina and Saskatoon to the Lethbridge zone, 111 bush workers from Moose Jaw, Regina, Yorkton and Saskatoon to the Prince Albert, Dauphin and Port Arthur zones, and one farm worker from Saskatoon to Calgary. The Alberta offices despatched 599 workers at the reduced rate, 585 to points within the province. Of these, 345 were harvesters, 126 were bushmen, the majority going to the Lethbridge zone, 43 were teamsters, 25 were miners sent by the Edmonton and Calgary offices to points in the Edmonton zone, seven were carpenters, five were beet pickers travelling to Lethbridge from Edmonton, and the rest were mostly domestic and hotel workers. Of the interprovincial transfers Edmonton sent one sheepherder to North Battleford and one farm worker and one housekeeper to Saskatoon, and Calgary sent two labourers, one teamster, one cook, one carpenter, and three bridgemen to Revelstoke, one cook to Swift Current and one farm worker to each of the Saskatoon and Cranbrook zones. In British Columbia the transportation certificates numbered 82, of which one was issued to a farm worker going from New Westminster to Saskatchewan, and the remainder to persons travelling to employment within the province. Forty-five of the provincial certificates were issued to bushmen, the majority going to the Prince George zone. The balance of the provincial movement included four carpenters, four miners, four engineers, seven labourers, six hotel and household workers, two powdermen, two blacksmiths, two teamsters, two farm hands, two saw-mill workers and one steel layer.

Of the 3,924 workers who benefited by the Employment Service reduced rate, 2,361 were carried by the Canadian National Railways, 1,554 by the Canadian Pacific Railway, four by the Pacific Great Eastern Railway, and five by the Temiskaming and Northern Ontario Railway.

BUILDING PERMITS ISSUED IN OCTOBER, 1925

THE building permits issued by 60 cities during October were valued at \$11,059,697, as compared with \$9,931,968 in September, 1925, and with \$11,817,189 in October of last year. There was, therefore, an increase of \$1,127,729 or 11.4 per cent in the first comparison and a decrease of \$757,492 or 6.4 per cent in the second.

Some 50 cities supplied detailed statements, showing that they had granted permits for the erection of approximately 1,200 dwellings estimated to cost about \$6,400,000, and of over 2,600 other buildings valued at more than \$2,900,000. In September, permits were granted for some 1,400 dwellings at a proposed cost in excess of \$5,800,000, and for more than 2,700 other buildings, valued at nearly \$3,600,000.

Quebec, Ontario and British Columbia registered increases in the value of the building permits issued as compared with September, that of \$922,253 or 32.7 per cent in Quebec being the largest. The remaining provinces showed declines, of which that of \$250,955 or 45.8 per cent in Manitoba was most pronounced.

As compared with the same month of last year, Saskatchewan and British Columbia re-

ported gains in the value of the building authorized; in the latter province the total for the month under review exceeded that for October, 1924, by \$1,119,365 or 132.7 per cent. Ontario recorded the greatest absolute reduction in this comparison, of \$875,174 or 16.0 per cent, but in New Brunswick there was a larger proportional loss of \$146,645 or 78.0 per cent.

Montreal and Toronto issued permits at a higher valuation than in September, 1925, but the totals were less than in October last year. In Vancouver, on the other hand, the building authorized was lower than in the preceding month, but considerably greater than in the same month of 1924. In Winnipeg, there were decreases in both comparisons, Sydney, St. John, Shawinigan Falls, Westmount, Brantford, Niagara Falls, Stratford, St. Catharines, Sarnia, York Township, Sandwich, Walkerville, Woodstock, St. Boniface, Saskatoon, New Westminster and Prince Rupert reported increases in the value of the building permits issued as compared with both September, 1925, and October, 1924.

Cumulative Record for First Ten Months, 1925.—The following table shows the aggregate value of the building authorized in 60 cities

				months.....			

during the first ten months of the last six years. The average index numbers of wholesale prices of building materials for the same months in those years are also indicated.

There was an increase during 1925 of 0.2 per cent over 1924, of 9.0 per cent over 1921, and of 1.1 per cent over 1920, but declines of 8.9 per cent and 15.5 per cent as compared with 1923 and 1922, respectively.

The accompanying table gives the value of the building permits issued in 60 cities dur-

ing September and October, 1925, and October, 1924. The 35 cities for which records are available since 1910 are marked with asterisks.

French Trade Unions as Shareholders

A certain number of railwaymen employed by the large railway companies in France and attached to the trade unions which are affiliated to the French Confederation of Christian Workers, have for some time practised what is known as "trade union shareholding" in the companies by whom they are employed. The aim is that representatives of the trade unions concerned should be allowed access to the shareholders' general meeting. For this purpose the union itself acquires a considerable number of shares in the company and sets up in its accounting branch a special service known as the shareholding fund. To this fund members are invited to entrust any securities which are productive of interest and the deposits thus secured are devoted to the purchase of railway shares. It is provided that the securities deposited by workmen may be withdrawn at will on a period of notice which varies, according to the amount withdrawn,

from a week to three months. With the annual dividends on the railway shares and the capital accruing from the repayment of shares, the trade union after deducting the sums necessary for paying a fixed rate of interest to its own shareholders (normally 5 per cent), constitutes a reserve fund for investment in securities other than railway company shares in order to guarantee and facilitate the repayment of their deposits to all those who partially or entirely withdrew the sums which they had contributed. The system would not appear to allow of the possibility, without inconvenience or opposition, of a sufficient number of shares in the companies being acquired to enable the staff to impose its will upon the general meeting of shareholders or upon the management, but at the same time it is possible in all cases to make the views of the staff heard by the other shareholders and by the management, to formulate claims and to bring them to the notice of public opinion.

Credit Unions in Canada and United States

"La Caisse Populaire" was organized at Levis, Quebec, Canada, in 1900, being modelled after the Raiffeisen rural banks and the Schultze-Delitzsch credit system used by the workers in Germany. Since that date similar credit unions have been established in twenty states of the American Union.

The purpose of a credit union is threefold: (1) To promote thrift among members of a group; (2) to create credit for them at legitimate rates, of interest, and (3) to educate them in matters having to do with the management and control of money. The groups may be rural or urban, comprising farmers, factory workers, clerks, railroaders, women's clubs, fraternal orders, etc.

Funds are accumulated by the sale of shares, generally at \$5 par. A credit union aims to help those who are least able to save, and for that reason permits of payments in weekly or monthly instalments, as low as ten and twenty-five cents. Stress is put more upon regularity of payment than upon the amount

paid. Additional funds are secured by the deposits, likewise very small, of members of the union. The success of a credit union depends largely upon the habit of saving which it creates among its members. Money thus accumulated is used in making provident loans to members exclusively.

Urban credit unions make remedial loans arising from emergencies such as sickness, operations, death and sudden unemployment. They help the small business man over temporary depressions and enable him to take advantage of gaining by cash buying. Rehabilitation loans have helped men returned from the war to re-establish themselves. There are loans for college tuitions in technical and normal schools and night courses in law, science, etc. Other loans in the form of second mortgages, aid members to purchase homes on which banks take a first mortgage. A credit union is supplemental to banks, being concerned with deposits too small for ordinary banks to handle profitably.

AGREEMENTS AS TO WAGES AND WORKING CONDITIONS IN COAL MINES IN ALBERTA

IN the issue of the LABOUR GAZETTE for October (p. 961) and in various preceding issues, reference was made to changes in wages for coal miners in Alberta since October, 1924, when a strike beginning on April 1, 1924, was terminated by a decrease in wages of about 12½ per cent. (LABOUR GAZETTE, November, 1924, p. 936). The revision of this agreement on June 17, 1925, by an agreement signed by the representatives of the United Mine Workers of America; District 18, and certain operators, members of the Red Deer Valley Coal Operators' Association, (who as members of the Western Canada Coal Operators' Association had been parties to the District Agreement) provided for a further reduction in wages of 15 per cent for contract miners and from 15 per cent to 25 per cent for day labour. This arrangement followed the severance of their connection with the Western Canada Coal Operators' Association by several of the operators belonging to it, who entered into separate agreements with their employees. The employees in turn gave up their membership in the United Mine Workers of America and either organized as independent unions or elected committees for the purpose of negotiating with the operators separately, the mines having been closed down for lack of orders by the operators on the ground that orders could not be secured at prices necessary to pay the District wage scale. (LABOUR GAZETTE, May 1925, pp. 510-514). Some operators continued under the agreement.

The revision of the District Agreement in June for the Red Deer Valley mines was subject to ratification by the members of the union and a number of these, before the vote was taken, left the United Mine Workers' Union, formed another union called the Red Deer Valley Miners' Union, and picketed the mines which were operating under the new agreement, which had in the meantime been ratified by the remaining members. Later (in September) the seceding miners also went to work under the same wages as in the new agreement, and an agreement substantially the same was signed by some of the operators and an independent union. Other labour organizations also became active in the area so that there were various unions competing for the adherence of the miners.

On November 30, a strike occurred in some of the mines (this is referred to elsewhere in this issue). The officers of the United Mine Workers of America negotiated with the

operators with whom they had an agreement and arranged for an increase in the wages of drivers in the agreement from \$4.90 per day to \$5.25.

In the Mountain Park coal area the operators, parties to the District Agreement of October 10, 1924, as members of the Western Canada Coal Operators' Association, continued operations under the agreement until it terminated on September 30, in accordance with notice given by the operators March 31, under the provisions of the agreement. The operators then entered into an agreement with independent unions or with committees of their employees, with the same wages and working conditions as the District Agreement with the Red Deer Valley operators.

The agreement of June 17, 1925, provided for amendments to the District Agreement dated October 10, 1920, which by various amendments and renewals continued in force the District Agreement dated June 10, 1920, which covered in detail wages and working conditions in force since April 1, 1920. The text of this agreement appeared in the LABOUR GAZETTE for August, 1920, page 1047. The text of the agreement in force since June 17, 1925, that is the 1920 agreement as amended June, 1925 has been received and is given herewith, but the contract rates for the various mines included are omitted.

AGREEMENT entered into between District No. 18 of the United Mine Workers of America, of the first part, and The Red Deer Valley Coal Operators' Association, of the second part, representing the following mines: [names omitted].

It is mutually understood and agreed that the following conditions and rates shall govern the parties hereto from the date hereof [June 17, 1925] to March 31, 1928, and that the parties hereto will meet in conference thirty (30) days prior to the expiration of this Agreement to discuss a renewal thereof:

Management of Mine.—The right to hire and discharge, the management of the mine and the direction of the working forces are vested exclusively in the company, and the United Mine Workers of America shall not abridge this right. However, the company agrees not to discharge employees or refuse work to applicants on account of, or because of, their affiliation with the United Mine Workers of America.

NOTE: It is not the intention of this clause that miners working under contract will be taken from their working places indefinitely to perform company work.

Check-off.—This contract is made and entered into for the sole use of the members of the United Mine Workers of America and the members of The Red Deer Valley Coal Operators' Association. All men who work in and around the mines who are eligible to become members of the United Mine Workers of

America shall join that organization and agree to sign check-off for all dues, assessments and fines, and the management of the mines agrees to forward deductions made to the secretary of the district or such other person as that official may designate. All union assessments over the sum of \$1.50 per employee per month must be approved by the secretary of District 18.

Form of Order

"I authorize and empower you to deduct and pay to the secretary of District No. 18, U.M.W. of A., or such other person as that official may designate, from my earnings from month to month the sum of Five Dollars (\$5.00) or such less amount as may be designated by the secretary of the district or such other person as he may appoint by order."

Witness..... (Signed).....

Settlement of Local and General Disputes.—(a) In case any disputes or grievances arise under this agreement or any local agreement made in connection therewith, whether the dispute or grievance is claimed to have arisen by the company, or any person or persons employed, or by the men as a whole, then the parties shall endeavour to settle the matter as hereinafter provided. But before any grievances or disputes shall be submitted to the Pit Committee, the person or persons affected shall endeavour, by personal application to the Pit Boss, Overman or Foreman in charge of the work where the dispute arises, to settle the matter, and in the event of them agreeing their decision shall be final.

(b) In case of any local dispute arising in any mine and failure to agree between the Pit Boss, Overman or Foreman in charge of the work where the dispute arises and any employee, the Pit Committee and Mine Superintendent or Mine Manager shall endeavour to settle the matter, and if they agree their decision shall be final.

(c) In the event of the failure of the Pit Committee and the Mine Superintendent or Mine Manager to settle any dispute so referred to them, as well as in the event of other disputes arising, the matter in dispute shall be referred in writing to the Commissioner of the Red Deer Valley Coal Operators' Association and the President of District No. 18, United Mine Workers of America, who shall meet as soon as practicable, and not in any event later than fourteen (14) days, with a Joint Committee of six (6) composed of the Commissioner of the Red Deer Valley Coal Operators' Association, the General Manager or General Superintendent of the mine where the dispute arose and another appointed by him, the President of District No. 18, United Mine Workers of America, the President or Secretary of the Local where the dispute arose and one other District Officer. If they agree their decision shall be binding upon both parties. In the event of their failure to agree they shall endeavour to select an independent chairman, and failing to agree upon an independent chairman the Commissioner of the Red Deer Valley Coal Operators' Association and the President of District No. 18, United Mine Workers of America, shall ask the Minister of Labour to appoint such chairman. The decision of the committee thus constituted shall be binding upon both parties.

(d) In the meantime, and in all cases while disputes are being investigated and settled, the miners, mine labourers and all other parties involved must continue to work pending investigation and until final decision has been reached; but where miner, miners, mine labourer or mine labourers has or have been discharged by the company, he or they shall not remain in the employ of the company while his or their case is being

investigated and settled. If the claim be made within five (5) days, where a man or men has or have been unjustly discharged, the case shall be dealt with according to this article, and if it is proven that he or they have been unjustly dealt with he or they shall be reinstated. If a claim is made for compensation for time lost, in cases where reinstatement has followed, it shall be left to the Joint Committee as provided for in subsection "c" to decide what amount (if any) is to be paid.

(e) Any breach of this agreement by any of the parties hereto is not to void the said agreement, but the same is to be continued in full force and effect.

(f) If the Commissioner of The Red Deer Valley Coal Operators' Association or the President of District No. 18, United Mine Workers of America, are unable, on account of sickness or absence from the district, to attend to the duties hereinbefore set out, those duties in the first instance would be assumed by either the President or Vice-President of the Red Deer Valley Coal Operators' Association, and in the second instance by either the Vice-President or Secretary of District No. 18, United Mine Workers of America. Due notice as to who would attend to these duties to be sent immediately, in the first instance to the party of the first part, and in the second instance to the party of the second part.

Duties of Pit Committee.—The Pit Committee shall be a committee of three (3) in each mine or other plant covered by this agreement, selected by the employees working at such mine or plant from among their own number, except one (1) member may be a Checkweighman or an officer of the Local Union, not necessarily an employee of the company. This member must previously have been selected as Checkweighman or officer from amongst the employees of the aforesaid mine or other plant. Due notice of such selection, properly certified in writing, shall be given to the company.

The duties of the Pit Committee shall be confined to the settlement of disputes between the Pit Boss or Foreman and any employee working in or around the mines, arising out of this agreement and all agreements made in connection therewith with the Pit Boss or Foreman and man or men having failed to agree.

The Pit Committee, in discharge of its duties, shall under no circumstances go around the mine for any cause whatever unless called by the Pit Boss or Foreman, or by a miner or dayman who may have a grievance which he has first tried to and can not settle with the Boss.

Members of the Pit Committee employed as daymen shall not leave their places of duty during working hours except by permission of the Pit Boss or Foreman, or in cases involving the stoppage of the mine.

New Work.—Whenever any new work arises a price for which has not been provided for in this agreement, on the request of the company or the miners a Joint Committee of six (6), composed of the Commissioner of The Red Deer Valley Coal Operators' Association, the General Manager or General Superintendent of the mine where the price is asked for and another appointed by him, the President of District No. 18, United Mine Workers of America, the President or Secretary of the Local where the price is asked for and one other District Officer, shall meet within fourteen (14) days. If they agree their decision shall be binding upon both parties. In the event of their failure to agree they shall endeavour to select an independent chairman, and failing to agree upon an independent chairman the Commissioner of The Red Deer Valley Coal Operators' Association and the President of District No. 18, United Mine Workers of America,

shall ask the Minister of Labour to appoint such chairman. The decision of the committee thus constituted shall be binding upon both parties.

Whenever any new system is inaugurated or radical change in the present system is made in any mine where there is a contract price fixed thereon, the company or the employee may ask for a price to be fixed on the work as "New Work"; as, for example, a change from "Longwall" to "Pillar and Stall," or vice versa, shall be considered "New Work."

In making the prices for New Work the company shall be guided by existing prices in the same mine or other mines in the neighbourhood.

Meantime, if the work is continued until such price has been arranged, all men shall be paid on the Day Waga Scale.

Employees not under Jurisdiction.—All employees connected with the management of the mine are not to be under the jurisdiction of the United Mine Workers of America or be members thereof, and shall include the following:—

Mine Manager or Superintendent, Overman or Assistant Overman, Pit Bosses, Fire Bosses, Boss Driver, Stable Boss, Master Mechanic, Electricians, Weighman, Head Carpenter, Head Blacksmith, Tipler or Breaker Foreman, Leader Boss, Night Watchman, Coke Oven Foreman, Outside Foreman, and all other Foremen, Timekeepers, Coal Inspectors, and Head Lampman.

Construction and Extensive Repairs.—It is agreed that all men working on improvements and extensive repairs are not included in the jurisdiction of the United Mine Workers of America.

The erection of head frames, tipples, breakers, washers, building, coke ovens, scales, machinery, railroad tracks and switches, etc., necessary for the completion of a plant, all being in the nature of construction work and extensive repairs or rebuilding of the same class of work, are to be considered as improvements and extensive repairs and the employees thereon are to be excluded as above when employed on such work only.

Penalty for Absence from Work.—When an employee absents himself from his work for a period of two (2) days unless through sickness or by first having properly arranged with the Pit Boss or Foreman and obtained his consent, he may be discharged. All employees whose absence would cause any stoppage of work must, before absents themselves, properly arrange with or notify the Pit Boss or Foreman for or of their absence, otherwise they may be discharged. Any employee who habitually, to the extent of five (5) days per month, absents himself from work may be discharged.

Checkweighmen and Checkmeasurers.—The Company will grant the right to the Miners to employ Checkweighers and Checkmeasurers, and will grant the said Checkweighers and Checkmeasurers every facility to enable them to render a correct account of all coal weighed or checked, and will allow the cars to be tared from time to time, and the machine to be properly tested from time to time, and will deduct from the wages of all Contract Miners such amounts as may be designated from time to time, and will pay over the same to the Checkweigher or Checkweighers, Checkmeasurer or Checkmeasurers.

Preference of Employment.—In case an employee is thrown out of employment, unless discharged or unless the employee has voluntarily withdrawn from employment, he shall be given preference over new men where vacancies occur in the same mine or in other mines in the same camp operated by the same Company.

Minimum Rate.—When a Miner's working place becomes deficient owing to any abnormal conditions or where coal in any district becomes so hard, pre-

venting him from earning the minimum wage of \$5.40 per shift, the Company shall pay him a sufficient amount to secure him the said minimum, providing he has done a fair day's work. Provided, however, regard shall be had to the pay period in which the deficiency is claimed. This shall not apply where work is performed in two separate places, one being normal and the other abnormal.

Miners taken to do Company Work.—The Company shall pay the sum of \$5.40 per day for all miners taken from contract work to do Company work.

Delivery of Material.—In accordance with the Coal Mines Regulation Act of Alberta, the Company will at all times deliver an adequate supply of suitable timber, rails, ties, planks, and sheet iron at the nearest cross-cut to the face of all raise workings, and in places where the regular pit cars go to the working face, without being handled by the miner, they shall be delivered on the cars to the working face in other places across the pitch; the timber, rails, ties, planks and sheet iron will be delivered at the mouth of the room.

Loading of Coal from Chutes.—In pitching seams, where chutes are used, the Company will handle all coal placed in the chutes by the miners.

Doctor and Hospital Arrangements.—The matter of doctor and hospital arrangements is to be arranged as provided for by the Workmen's Compensation Act of Alberta.

Store.—It shall be understood and agreed that the employees shall be at perfect liberty to purchase goods wherever they may choose to do so.

Holidays.—The following days only shall be observed as holidays: New Year's Day, Good Friday, May First, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, District and International Election Day, Christmas Day.

Funerals.—In the event of an instantaneous death by an accident in the mine or outside the mine, the miners underground and all other employees may suspend work in the seam where the accident occurred on the day of the accident, but shall resume work on the following day and continue to work till the day of the funeral, when it is optional with them whether they shall work or not.

Sub-Contracting.—No sub-contracting shall be allowed in any mine operated by the Company, but this shall not apply to the employment of Backhands.

Employees to care for Mine.—In case of either local or general suspension of mining either at the expiration of this Agreement or otherwise, the Engineers, Firemen and Pumpmen shall not suspend work, but shall, when mining is suspended, fully protect all the Company's property under their care, and operate fans and pumps, and lower and hoist such men and supplies as may be required to protect the Company's property, and any and all coal required to keep up steam at the Company's plant; but it is understood and agreed that the Company will not ask them to hoist any coal for sale on the market.

Single Shift.—The single shift system in rooms and pillars shall be adhered to as far as practicable.

Wet Places.—A working place in the mine where water drops from the roof in quantities sufficient to wet a man's clothing, or where standing water is over six inches deep, shall be considered a "wet place." The rate for wet places shall be 50 cents per day extra for all inside day wage men.

Rock Miners.—Where a man is engaged on rock work where hammer and steel are used, he shall be considered a "rock miner" and paid rock miner's wages.

If an air drill is used the driller shall be paid machine runner's wages, and the helper paid machine runner's helper's wages. The other men engaged shall be classed as "miners and labourers" as may be.

When a man is engaged on work in both rock and coal, if the amount of loose rock is greater than the

amount of loose coal he shall be classed as a "rock miner" and where the amount of loose coal is greater than the amount of loose rock he shall be classed as a "coal miner."

Brushing.—When a man is engaged on brushing, either top or bottom, using the usual drills and tools, he shall be classed as a "coal miner." If the brushing is done by hammer and steel he shall be classed as a "rock miner."

Timbermen taking out rock while engaged in retimbering or repairing shall not be classed as "rock miners."

Retirement.—Where any employee has drawn his time before the regular payday, he thereby severs his connection with the Company, and any alleged grievance he may have ceases to be a question for consideration under this agreement. The words "drawn before the regular pay-day" is satisfied by the application of the employee for, and his receipt of, his time-check before the regular pay-day.

Chinese Labour.—The United Mine Workers of America do not in any way prohibit the employment of Chinese in or around the mine, but where such labour is employed they shall be paid the scale for such work.

Oil.—Present conditions to prevail.

Pay-day.—All wages earned by any person or persons employed in or about a mine shall be paid in accordance with the Coal Mines Regulation Act of Alberta. Any employee desiring to leave the service of the Company, on his request shall be paid all moneys due him within two (2) days after his stoppage of work.

Market Restrictions.—It is agreed that District No. 18, United Mine Workers of America, will not in any way restrict or interfere with the marketing of coal or coke to any person, firm or corporation.

Turn of Cars.—The Company shall, as far as possible, supply each and every miner with an equal turn of cars.

Backhands.—The present practice of working miners either as partners or with miners and labourers, as it exists in the several camps at the present time, shall be adhered to.

On all Company work the Company shall employ such class of men as the work requires and at the rate of wages provided for in this Agreement.

Contract not to be Voided by Miners' Constitution or Rules.—This contract is in no case to be set aside because of any rule of the United Mine Workers of America now in force or which may hereafter be adopted; nor is this contract to be set aside by reason of any provision in the National, District or Local Constitutions.

Overtime.—All overtime shall be paid for at the Scale Rate per hour. Operators are hereby requested to eliminate overtime and work on Sundays and holidays as far as practicable.

Blasting.—Where in the future blasting is prohibited in the mine and it can be shown that the earnings of the miner decreased thereby, the contract rates shall be taken up as under the "New Work" clause and an equitable allowance shall be made.

Powder.—Where explosive supplies are being sold to the miners they shall be furnished at cost price, which shall include handling, transportation and insurance.

NOTE:—In case any dispute should arise under this clause with respect to selling price, it shall be determined by the Joint Committee in the same manner as is provided in Clause "C" of "Local and General Disputes."

The Western Canada Coal Operators' Association disbanded formally on November 23, 1925, most of the members having entered into separate agreements with their employees or with independent unions. A number of the latter, including some in the Red Deer Valley, united to form the Mine Workers' Union of Canada (LABOUR GAZETTE, November, page 1090).

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING November the Department received information regarding thirty-three contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by order in council for the protection of the labour to be employed. In thirty-two of these contracts the general fair wages clause is inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

The remaining contract contained a schedule of rates and hours based on the current standards of the district in these respects. This schedule is given below.

The following general labour conditions sanctioned by the Fair Wages Order in Council appear in the thirty-three contracts above referred to:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established

to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work

to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Department of Public Works

Contract containing schedule of wages and hours—

Construction of improvements to the wharf at Cap de la Madeleine, P.Q. Names of contractors, Onésime Poliquin and Joseph Poliquin, "O. & J. Poliquin," of Portneuf, P.Q. Date of contract, October 27, 1925. Amount of contract, \$8,971.25. A fair wage schedule is inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours per day
General Foreman	\$ cts.	
Mixer runner	0-60 per hour	10
Crusher runner	0-50 "	10
Blacksmiths	0-50 "	10
Carpenters	0-45 "	10

Labourers (ordinary)	0-35 "	10
Driver (one horse & cart)	0-50 "	10
Driver (two horses & wagon)	0-70 "	10

Contracts containing the general Fair Wages Clause—

Dredging East River, N.S. Name of contractor, the Halifax Dredging Company, Limited, of Halifax, N.S. Date of contract, November 10, 1925. Amount of contract, Class "A"—\$9 per cubic yard, place measurement. Class "B"—70 cents per cubic yard, scow measurement.

Dredging berths in front of McLeod, Pettingill and Canadian Pacific Railway Wharves at St. John, N.B. Name of contractors, J. S. Porter and G. S. Macdonald, St. John, N.B. Date of contract, October 25, 1925. Amount of contract, Class "A"—\$8.70 per cubic yard, place measurement. Class "B"—60 cents per cubic yard, place measurement.

Dredging channel at Bersimis, P.Q. Name of contractors, The National Dock & Dredging Corporation, Limited, Quebec, P.Q. Date of contract, October 28, 1925. Amount of contract, Class "A"—\$8 per cubic yard, scow measurement. Class "B"—\$1.05 per cubic yard, scow measurement.

Dredging channel in St. François River in front of the Village of Notre-Dame de Pierreville, P.Q. Name of contractor, Aime Laperrière, Pierreville, P.Q. Date of contract, July 17, 1925. Amount of contract, Class

"A"—95 cents per cubic yard, scow measurement. Class "B"—45 cents per cubic yard, scow measurement.

Dredging channel at Breithaupt Leather Company's Wharf, Penetanguishene, Ont. Name of contractor, Théophile Light, Penetanguishene, Ont. Date of contract, November 18, 1925. Amount of contract, Class "B"—80 cents per cubic yard, place measurement.

Construction of pile work wharf at Wolfville, N.S. Name of contractor, Halle B. Bigelow, Canning, N.S. Date of contract, October 24, 1925. Amount of contract, unit prices; approximate expenditure, \$6,767.

Reconstruction of the superstructure of and improvements to the actual Government wharf at Matane, P.Q. Name of contractors, Ludger Lemieux, Limitée, Ste. Marie, county of Beauce, P.Q. Date of contract, November 13, 1925. Amount of contract, unit prices; approximate expenditure, \$35,865.50.

Construction of a breakwater at Grand Harbour (Ingall's Head), N.S. Name of contractors, John Flood & Sons, Limited, St. John, N.B. Date of contract, November 2, 1925. Amount of contract, unit prices; approximate expenditure, \$21,346.01.

Construction and installation of one electric passenger and one electric freight elevator in the Old Post Office, St. John, N.B. Name of contractors, The Turnbull Elevator Company, Limited, Toronto, Ont. Date of contract, October 26, 1925. Amount of contract, \$6,850 plus \$150 for the installation of sliding gates and interlocks.

Construction of a close pile harbour wall at Owen Sound, Ont. Name of contractors, J. E. Woolrich and R. H. Brigham, Owen Sound, Ont. Date of contract, October 23, 1925. Amount of contract, unit prices; approximate expenditure, \$13,272.05.

Construction of a landing block, Saugeen River, Ont. Name of contractor, William Hunter, Kincardine, Ont. Date of contract, October 27, 1925. Amount of contract, unit prices; approximate expenditure, \$7,491.30.

Construction of Breakwater at Dingwall (Aspy Bay), N.S. Name of contractor, W. E. Landry, Antigonish, N.S. Date of contract, October 24, 1925. Amount of contract, unit price; approximate expenditure, \$54,708.

Construction of Bank protection in Rivière du Gouffre at Baie St. Paul, P.Q. Name of contractor, Théodore Lacouline, Château Richer, P.Q. Date of contract, November 2, 1925. Amount of contract, unit prices; approximate expenditure, \$21,291.

Construction of a laboratory and Rust Investigation Building at Winnipeg, Man. Name of contractors, The J. McDiarmid Company, Limited, Winnipeg, Man. Date

of contract, October 27, 1925. Amount of contract, \$27,900 plus \$300 for asbestos shingles.

Alterations and additions to the heating plant at Fort Osborne Barracks, Winnipeg, Man. Name of contractors, The James Ballantyne Company, Limited, Winnipeg, Man. Date of contract, October 27, 1925. Amount of contract, \$15,000.

Construction of a pier at Green Point, Gloucester County, N.B. Name of contractor, Thos. P. Charleson, Ottawa, Ont. Date of contract, October 31, 1925. Amount of contract, unit prices; approximate expenditure, \$14,579.50.

Construction of North Dyke No. 1, at Steveston, Fraser River, B.C. Name of contractors, Fraser River Pile Driving Company, Limited, New Westminster, B.C. Date of contract, October 26, 1925. Amount of contract, unit prices; approximate expenditure, \$7,531.74.

Construction of repairs to wharf and approach at Clayoquot, B.C. Name of contractors, James McDonald and Thomas Wither, Victoria, B.C. Date of contract, October 26, 1925. Amount of contract, unit prices; approximate expenditure, \$4,907.52.

Construction of a pile bent and timber decking wharf at Blubber Bay, B.C. Name of contractor, R. Bumstead, Vancouver, B.C. Date of contract, October 27, 1925. Amount of contract, \$5,849.

Construction of a cottage at Lawlor's Island, Quarantine Station, Halifax, N.S. Name of contractors, William Wheby and E. L. Smith, Dartmouth, N.S. Date of contract, October 27, 1925. Amount of contract, \$6,722.

Construction of a Post Office at Chipman, N.B. Name of contractors, J. A. Grant & Company, Limited, St. John, N.B. Date of contract, November 3, 1925. Amount of contract, \$8,445.

Construction of rock mound submerged dams and removal of portion of Deer Rock, in the Columbia River Narrows, below Burton, District of Kootenay, B.C. Name of contractor, A. H. Green, Nelson, B.C. Date of contract, October 26, 1925. Amount of contract, unit prices; approximate expenditure, \$9,736.15.

Reconstruction of the public wharf at Chute à Blondeau, Ont. Name of contractor Joseph Lalonde, St. Andrews East, P.Q. Date of contract, October 26, 1925. Amount of contract, unit prices; approximate expenditure, \$4,950.

Construction of an extension to the breakwater at Burlington, Ont. Name of contractors, The Randolph Macdonald Company, Limited, Toronto, Ont. Date of contract,

November 18, 1925. Amount of contract, unit prices; approximate expenditure, \$6,981.60.

Construction of an extension to the breakwater at Saulnierville, N.S. Name of contractor, Thomas M. Rawding, Liverpool, N.S. Date of contract, November 17, 1925. Amount of contract, unit prices; approximate expenditure, \$7,418.49.

Construction of a public building at St. Jacques de l'Achigan, P.Q. Name of contractor, Albert Brouillet, St. Esprit, P.Q. Date of contract, November 13, 1925. Amount of contract, \$10,450.

Construction of public building at Stellarton, N.S. Name of contractor, John Johnson, New Glasgow, N.S. Date of contract, November 10, 1925. Amount of contract, \$15,770.

Construction of repairs and improvements to the wharf at Father Point, P.Q. Name of contractors, E. Cloutier & Ph. Gaudreau—"Cloutier & Gaudreau," of Trois Saumon, P.Q. Date of contract, October 23, 1925. Amount of contract, unit prices; approximate expenditure, \$19,382.63.

Wharf repairs at St. André, Kamouraska County, P.Q. Name of contractors, Ludger Lemieux, Limitée, Ste. Marie de la Beauce, P.Q. Date of contract, November 7, 1925. Amount of contract, unit prices; approximate expenditure, \$3,332.50.

Reconstruction of part of the wharf to be taken over at Port au Saumon, P.Q. Name of contractors, Ludger Lemieux, Limitée, Ste. Marie, County Beauce, P.Q. Date of contract, November 7, 1925. Amount of contract, unit prices; approximate expenditure, \$11,083.

Supply and installation of interior fittings in the public building at Rimouski, P.Q. Name of contractors, The J. T. Schell Company, Alexandria, Ont. Date of contract, November 18, 1925. Amount of contract, \$1,455.

Post Office Department

The following is a statement of payments made in November, 1925, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals.	\$ 1,892 60
Making and repairing rubber stamps, daters, etc.	252 58
Making up and supplying letter carriers' uniforms, etc.	10,137 21
Stamping pads, ink, etc.	823 08
Mail bag fittings.	34,367 30
Scales.	967 15
Repairs to letter boxes, etc.	98 68
Cotton duck bagging.	57,535 45

Department of Railways and Canals

Contract containing the general Fair Wages clause

Supply, delivery and erection of the super-structures of the four movable (Bascule) Bridges over the Welland Ship Canal at

Locks Nos. 1 2, 7 and 8, known as Bridges Nos. 1, 3, 7 and 19. Name of contractors, The Hamilton Bridge Works Company, Limited. Date of contract, November 18, 1925. Amount of contract, schedule rates (approximately \$459,689 estimated from estimated quantities).

UNION WAGES AND HOURS OF LABOUR IN THE UNITED STATES

THE United States Bureau of Labour Statistics compiles each year data as to rates of wages, hours of labour, etc., under the union scales for certain trades in the principal cities in the United States. The information secured is published in detail annually in special reports issued the following year,* but summaries of the figures are given in the *Monthly Labour Review* published by the Bureau. The issues for September and November contain information as to the figures for May 15, 1925, with comparisons with previous years.

The Bureau publishes the hourly rate of pay for each trade in each city on May 15, as specified in the agreements between the unions and employers. The number of employees working under these agreements is also given, the hours per week and the weekly wages for a full week's work. It is stated that it has not been found practicable to secure from the unions or the employees themselves data as to actual or average weekly earnings.

It may be mentioned here that the Bureau also compiles and issues reports on wages and hours of labour in various industries in the United States, the data being taken from the pay rolls of employers by agents of the Bureau, and for these reports data as to actual weekly earnings are secured and also as to hours worked.

The Bureau analyses the data as to trade union scales, calculating index numbers of rates of wages per hour, full time hours per

week and wages per week full time. The following table gives these index numbers for all trades and cities for previous years, the data going back to 1907.

INDEX NUMBERS OF UNION WAGE RATES AND HOURS OF LABOUR IN THE UNITED STATES AS OF MAY EACH YEAR, 1907 TO 1925.

(1913=100.0)

Year	Index numbers of—		
	Rate of wages per hour	Full-time hours per week	Rate of wages per week full time
1907.....	89.7	102.6	91.5
1908.....	91.0	102.1	92.5
1909.....	91.9	101.9	93.3
1910.....	94.4	101.1	95.2
1911.....	96.0	100.7	96.5
1912.....	97.6	100.3	97.7
1913.....	100.0	100.0	100.0
1914.....	101.9	99.6	101.6
1915.....	102.8	99.4	102.3
1916.....	107.2	98.8	106.2
1917.....	114.1	98.4	112.4
1918.....	132.7	97.1	129.6
1919.....	154.5	94.7	147.8
1920.....	199.0	93.8	188.5
1921.....	205.3	93.9	193.3
1922.....	193.1	94.4	183.0
1923.....	210.6	94.3	198.6
1924.....	228.1	93.9	214.3
1925.....	237.9	93.0	222.3

The data cover Bakers, Building Trades (41 trades), Chauffeurs and Teamsters and Drivers, Freight Handlers (Longshoremen), Granite Cutters and Stonecutters, Laundry Workers, Linemen, Printing Trades (book and job offices 10 trades; new offices, 8 trades), and Street Railway Employees. The number of employees included in the compilation was 717,016 in 66 cities. It will be observed that figures for railway employees, coal miners, iron and steel workers, etc., are not included.

* Union Scale of Wages and Hours of Labour, May 15, 1924, Bulletin of the United States Bureau of Labour Statistics No. 388, Wages and Hours of Labour Series, Government Printing Bureau, Washington (June, 1925).

ANNUAL CENSUS OF INDUSTRY OF CANADA

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census, covering statistics of fisheries, mines, forestry, and general manufactures in Canada. This annual census is in addition to the Bureau's decennial census and the statistics of population, finance, education, etc. Preliminary reports on various industries have been reviewed in previous issues of the *LABOUR GAZETTE*. These preliminary reports are consolidated from time to time in general reports issued by the Bureau.

Distilled Liquors, 1923 and 1924

This report covers operations in 9 plants in 1923 and 13 in 1924. In the latter year there were in Ontario, 4; in Quebec, 6; in British Columbia, 2, and in Manitoba, 1; an increase over 1923 of 1 in Ontario, 2 in Quebec, and 1 in Manitoba. There was an increase in the capital investment from \$16,135,724 to \$22,556,007, or \$6,420,283. The net value of the products increased from \$2,511,749 to \$7,388,923. The gross value of the products in 1923 in all provinces was \$4,226,465, of which 72.9 per cent represented the value of whiskies and other potable spirits. In 1924 the gross value was \$10,711,801 of which 86.7 per cent represented the value of whiskies and other potable spirits. The production of these thus increased in value during the period \$6,208,124, or 201.5 per cent.

Employment statistics are given under three heads. The first table shows that in 1923 there was \$556,458 received in salaries and wages by 409 employees, and in 1924 \$1,023,522 received by 806 employees, an increase in the total salaries and wages of 83.9 per cent. The figures are given separately for those on salaries and wages, and by sex of employee. The next table gives the number of wage earners by months, showing that the average number employed was 327 in 1923 and 721 in 1924. In 1923 the highest level was reached in the months of July and September and the lowest in October. In 1924 the highest level was reached in November and the lowest in August. The third table shows that the average number of days in operation, full time, was 225.0 in 1923 and 232.5 in 1924 and the number of days on part time was 8.0 in 1923 and 16.5 in 1924. The number of days idle was 71.0 in 1923 and 55.0 in 1924. The average number of hours worked per day or shift was 9.0 in 1923 and 8.8 in 1924, while the average number of hours worked per week was 64.1 in 1923 and 53.8 in 1924.

Tables shows statistics of capital employed,

fuel consumption, power equipment and materials used in 1923 and 1924.

The imports of distilled liquor are shown by kind of liquor and by countries from which imported. The value of all such imports \$19,456,025 for 1,247,504 gallons in 1923 and \$18,827,149 for 1,261,421 gallons in 1924.

The statistics of exports of distilled liquors by quantity and value in 1923 and 1924 showed that the total value of exports in 1923 amounted to \$8,391,484 for 1,130,679 gallons, and in 1924 \$10,064,486 for 1,210,458 gallons.

The Fur Goods Industry, 1924

The numbers of fur goods establishments reporting operations in 1924 was 218. These were divided as follows: one in Nova Scotia; 3 in New Brunswick; 67 in Quebec; 115 in Ontario; 16 in Manitoba; 3 in Saskatchewan; 7 in Alberta; and 6 in British Columbia.

The total value of products in 1924 was \$12,265,371, an increase over 1923 of 3 per cent. There were increases in the number of fur coats made and decreases in the furlined coats.

In 1924 there were 2,469 persons employed on an average, being 417 salaried employees, 1,988 wage earners and 64 outside piece workers. Payments to employees amounted to \$2,658,017. The number of wage earners by months shows that employment was highest in November, with 2,303 wage earners, and lowest in February with 1,600. These calculations are also given by provinces.

The 218 establishments were in operation 61,569 days. The number of days idle was 4,704 and the number of hours worked per week was 10,240. The average number of days in operation was 282.4. The average number of hours per week was 46.9 being greatest in Manitoba at 48.6 and least in British Columbia at 44.0.

A table of hours of wage earners in 1924, by provinces, shows that the number working 8 hours per day or less was 1,815; the number working 9 hours was 649; the number working 10 hours was 63; and the number working over 10 hours was 27.

In the classification of establishments according to number of employees, there were 153 establishments with less than 10 persons employed; 37 with 10 to 20 persons; 19 with 20 to 50 persons; and 9 with over 50. Of these last 8 were in Quebec and one in Ontario.

During the year ending March 31, 1925, the total value of furs imported into Canada was \$8,333,571. Of this amount, \$8,213,317 represented unmanufactured goods and \$120,254 manufactured goods. Of the total, 8.5 per

cent were from the United Kingdom, 78.9 per cent from the United States, and the remainder from other countries. The decrease compared with the value of imports in 1924 was 5.6 per cent.

During the year ending March 31, 1925, the total value of furs exported was \$17,119,981, a decrease of 7 per cent from the previous year. Of the total, 37.0 per cent went to the United Kingdom, 61.3 per cent went to the United States, and the remainder to other countries. Of the total a very large amount consisted of undressed fur skins, which amounted to \$16,-

960,675; dressed fur skins were valued at \$48,446 and manufactures of furs at \$110,860.

The report also contains a section on the fur dressing industry, 1924. There were 8 fur dressing and dyeing establishments, there being 5 in Quebec, 2 in Ontario and one in Manitoba. The total number of skins treated was 3,473,409, of which nearly one-half were muskrat skins. Other important kinds of skins were rabbit, squirrel, skunk and Persian lamb. The total amount received for the dressing and dyeing of the furs was \$1,120,895, a decrease of \$92,127 from the preceding year.

MANUFACTURING STATISTICS OF CANADA, 1923,

IN connection with the Census of Industry, the Dominion Bureau of Statistics recently published four preliminary reports on manufacturing statistics for the year 1923, the divisions treated being the Maritime Provinces, Quebec, Ontario, and the Western Provinces, the four reports thus covering the entire country. Each of the reports gives statistics for the year 1922 and 1923, and in the first and last mentioned, the provinces are treated separately. Thus there are three tables for each province, covering principal statistics of the leading industries, principal statistics by groups of industries and principal statistics of the more important cities and towns.

In the Maritime Provinces, there were in Prince Edward Island in 1923, 368 establishments reporting, an increase of 16 over the previous year; in Nova Scotia there were 1,193, an increase of 30; and in New Brunswick there were 872, a decrease of 25. Statistics concerning the ten leading industries of each province are shown, in the order of value of products, the chief ones being: Prince Edward Island, preserved fish; Nova Scotia, iron and steel products; New Brunswick, lumber, lath and shingles. The statistics of cities and towns are given for two in Prince Edward Island, seven in Nova Scotia and nine in New Brunswick. In Prince Edward Island there were 2,745 employees receiving in salaries and wages \$606,693; in Nova Scotia there were 17,179 employees receiving \$13,226,378; and in New Brunswick, 16,221, receiving \$12,868,164. The values of products were respectively: \$4,462,821; \$81,984,848, and \$70,114,006.

Quebec had 7,142 establishments reporting in 1923, a decrease 268 from 1922. The principal statistics of forty leading industries are shown for 1923. In point of production the pulp and paper industry ranked first, with the cotton industry second and railway rolling stock third. In capital investment, the pulp

and paper industry led with electric power plants second and cotton third. Pulp and paper had the greatest number of employees 14,134 receiving in salaries and wages \$17,323,064. The total number of employees in all industries was 163,622 receiving in salaries and wages \$164,356,082 and the value of products was \$811,103,396. The table of principal industrial statistics for all cities and towns in Quebec showed that Montreal with 1,451 establishments produced 56.6 per cent of the total for the province.

Ontario showed 9,549 establishments reporting in 1923, an increase of 161 over 1922. Of the forty leading industries the four leading in point of production were automobiles, slaughtering and meat-packing, flour and grist mills and pulp and paper. The first three in point of capital investment were electric light and power, pulp and paper and agricultural implements. In all industries there were 262,770 employees receiving in salaries and wages \$307,866,314, while the total value of products was \$1,451,883,308. The second table shows that by groups of industries the first three groups in value of production were in 1922 and 1923 iron and steel products, vegetable products, and wood and paper products. The third table shows the principal statistics of 73 cities and towns in order of value of production, Toronto being first with a productive value of \$409,829,557 which was 28.2 per cent of the total for the province.

In the Western Provinces in 1923, there were in Manitoba 803 establishments reporting, an increase of 22 for the year; in Saskatchewan, 647, an increase of 33; in Alberta, 723, an increase of 51; and in British Columbia 1,345, an increase of 81. The first main table shows statistics of the ten leading industries in the Prairie Provinces and fifteen in British Columbia. In the Prairie Provinces the flour milling industry stood first, slaughtering and meatpacking being second in Manitoba and

Alberta, with dairy products second in Saskatchewan, while third place was taken by the dairy industry in Manitoba and Alberta, and printing and publishing in Saskatchewan. In British Columbia the lumber industry was first with pulp and paper and fish canning second and third. In the statistics by groups of industries it was shown that the order of the first three groups according to value of production in 1923 was as follows: Manitoba, vegetable products, animal products, wood and paper products; Saskatchewan vegetable products, non-metallic minerals, animal products; Alberta, animal products, vegetable products,

wood and paper products; British Columbia, wood and paper products, animal products vegetable products. The number of employees were as follows: 14,816 in Manitoba receiving in salaries and wages \$18,394,484; 4,105 in Saskatchewan receiving \$5,384,958; 8,767 in Alberta receiving \$10,633,705; and 35,042 in British Columbia receiving \$38,113,250. Principal statistics of the chief cities and towns in each of the four provinces are given. The total values of products were as follows: Manitoba, \$97,334,531; Saskatchewan, \$34,337,801; Alberta, \$54,337,801; British Columbia, \$175,606,992.

Prospects of Mining Industry in Canada

The report of the Dominion Department of Mines for the year ending March 31, 1925, contains the following statement on the position and prospects of the mining industry in Canada:—

The value of the minerals produced in Canada during 1924 was about \$209,500,000. This is a decrease from 1923 of about \$4,500,000 and is accounted for by decreases in the output of non-metallics, mainly coal, and of structural materials and clay products. The production of metallic minerals on the other hand showed an increase in value of about \$18,500,000. Labour troubles in the west were responsible for the decreased production of coal, and delayed building programmes reduced the demand for structural materials and clay products.

In spite of the slight fall in the value of the production the mining industry cannot be described as being in anything but a healthy condition. It has a capital investment over \$500,000,000 and employs directly about 60,000 men. It consequently occupies third place among the primary Canadian industries and is exceeded only by agriculture and forest products. While it has shown during the last forty years an extraordinary steady growth with only minor fluctuations, the possibilities of mineral production for the future are of greater interest.

Especially among the western nations world consumption of minerals has increased at a far more rapid rate than the growth of population. According to the best estimates the population of the world during the last forty or forty-five years has grown by about 30 per cent. Within the same period coal production has risen by about 300 per cent, pig-iron output by nearly 300 per cent, copper production by over 1,000 per cent, and petroleum by more than 2,000 per cent. A similar rate of growth is apparent in most other industrial minerals, indicating the extra-

ordinary drain that modern civilization imposes on mineral resources.

The significance of this to Canada is important because of her geographical relationship to the greatest mineral consuming nation of the world. With about 5 per cent of the world's population the United States is said to consume about 42 per cent of the world's output of coal, 53 per cent of the iron, 57 per cent of the steel, 44 per cent of the copper, and 73 per cent of the oil. The United States has enormous mineral resources of its own and has an exportable surplus of many important minerals, yet there is little doubt that its market will sooner or later place a premium upon every valuable mineral occurrence in the Dominion of Canada, just as it has already done with certain of our other natural resources.

These factors are the basis of a well-founded optimism regarding the future of Canada's mineral producing industry.

The development of mineral manufacturing industries of necessity lags somewhat behind the mineral producing industries, but for a young and growing country Canada's position in this respect shows that considerable progress has been, and is being, made. The number of plants in operation during 1924 and turning out manufactured articles of mineral origin was 10,719. These plants had a capital investment of \$1,550,000,000 and provided articles to the value of \$379,000,000. The Department of Mines is not so much concerned with this phase of industry as it is with the primary industries of production and of later treatment and reduction of ores, but the position of the mineral manufacturing industries is cited as evidence of the relative strength and value to the country of these two groups of industries and the necessity of developing those secondary manufacturing industries that may be based upon our own raw mineral products.

PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1925

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was upward, both the family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being considerably higher than in October.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$11.23 at the beginning of November as compared with \$10.89 for October; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. Substantial increases occurred in the prices of potatoes, eggs and butter with less important increases in the prices of milk, cheese, lard and salt pork. The prices of flour, bread, rolled oats, beef, mutton, sugar, beans and prunes were slightly lower. Including the cost of fuel and rent with that of foods, the total budget averaged \$21.51 at the beginning of November as compared with \$21.11 for October; \$20.81 for November, 1924; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.13 for November, 1920; \$26.92 for July, 1920 (the peak); \$21.61 for November, 1918; and \$14.36 for November, 1914. In fuel, both coal and wood prices advanced slightly. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, showed a substantial advance to 161.1 for November as compared with 156.6 for October; 157.7 for November, 1924; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.5 for November, 1920; and 256.7 for May, 1920 (the peak). Fifty-three prices quotations were higher, thirty-three were lower and one hundred and fifty were unchanged.

In the grouping according to chief component material five of the eight main groups were higher, two were lower and one was unchanged. The Vegetable Products group and the Animals and Their Products group both advanced substantially, the former because of higher prices for grains, flour and other

milled products and potatoes and the latter mainly because of higher prices for eggs and cheese which more than offset the declines in the prices for hogs, sheep and meats. An increase in the price of spruce caused a slight advance in the Wood, Wood Products and Paper group. The Non-Ferrous Metals and their Products group and the Chemicals and Allied Products group both showed slight advances. Lower prices for raw cotton and cotton yarn were mainly responsible for the decline in the Fibres, Textiles and Textile Products group while the Iron and its Products group was slightly lower due to declines in the price of tin plate, round and square steel bars and black steel sheets. Non-Metallic Minerals and their Products was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods advanced. In the former the increase was due to higher prices for foods. Flour, tea, sugar, potatoes, eggs and cheese advanced while meats and foreign fruits declined. In producers' goods, materials for the textile and clothing, for the meat packing and for the metal working industries declined, but these declines were more than offset by the advances in furs, materials for the milling and for the chemical using industries as well as for miscellaneous producers' materials.

In the grouping according to origin raw or partly manufactured goods advanced due to higher prices for grains, potatoes, tea, raw sugar, eggs, rubber, furs, wool, smelted products and non-ferrous metals. Fully or chiefly manufactured goods were higher mainly because of higher prices for flour and other milled products, sugar, cheese, hessians, glycerine and non-ferrous metal products. Articles of farm origin, of forest origin and of mineral origin advanced while articles of marine origin declined.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, was unchanged, being 146 for September and October; 150 for August and 148 for October, 1924. Grouped by stage of manufacture raw materials were lower, consumers' goods higher, while producers goods were unchanged. Grouped by origin goods produced declined while goods imported advanced.

The Canadian Bank of Commerce index of exports rose from 155.45 for October to 161.12 for November while that of imports rose from 164.21 to 166.27. The combined index of both imports and exports advanced from 159.82 to 163.69.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of November of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts

extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1919, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Prices of beef again showed a general decline, sirloin steak averaging 27.7 cents in November as compared with 28.4 cents in October; rib roast 20.6 cents in November and 21.2 cents in October, and shoulder roast 14.8 cents in November and 15.1 cents in

* LABOUR GAZETTE, December, 1923, page 1442.

October. Veal was slightly higher at 18.6 cents per pound in the average. Mutton declined from an average of 29.2 cents per pound in October to 28.6 cents in November. Prices were lower in most localities. Fresh pork was down from an average of 29.1 cents per pound to 28.7 cents. Bacon showed little change, averaging 41.7 cents per pound. Boiled ham was 1 cent per pound lower, averaging 61 cents. Fresh fish showed little change. Lard rose from an average of 24.5 cents per pound to 24.8 cents. Eggs were substantially higher, fresh averaging 57.2 cents per dozen in November as compared with 48 cents in October and 43.3 cents in September and cooking averaging 48.7 cents in November, 43 cents in October, and 39.2 cents in September.

Milk averaged slightly higher at 11.9 cents per quart. Increases were also reported from Halifax, Quebec, Hull, Ottawa, Windsor, Sault Ste. Marie, Moose Jaw and Victoria. Dairy butter was up from an average of 41.7 cents per pound in October to 44.7 cents in November and creamery from 47.7 cents in October to 50.5 cents in November. The advances in both cases were general. Cheese rose from 32.3 cents per pound to 33.4 cents.

Bread declined from an average of 7.8 cents per pound in October to 7.7 cents in November. Lower prices were reported from New Glasgow, Fredericton, Three Rivers, Montreal, London, Timmins, Port Arthur, Fort William, Regina, Lethbridge, Victoria and Prince Rupert. Flour fell from an average of 5.4 cents per pound in October to 5.1 cents in November, decreases occurring in most localities. Rolled oats were slightly lower at 5.9 cents per pound. Rice and tapioca showed little change. Canned vegetables again averaged lower, tomatoes being 17.8 cents per can in November and 19.3 cents in October, peas 18.1 cents in November and 18.6 cents in October, and corn 17.7 cents in November and 19.5 cents in October. Beans declined slightly, averaging 8.1 cents per pound. Onions were down from an average of 5.3 cents per pound to 4.9 cents. Potatoes showed a general advance, averaging \$1.96 per ninety pounds in November as compared with \$1.49 in October. Prunes were slightly lower. Raisins were up from 15.9 cents per pound to 16.6 cents. Canned peaches showed little change, averaging 29.1 cents per can. Corn syrup was down from an average of 48.5 cents per tin in October to 47.8 cents in November. Sugar was again slightly lower, granulated averaging 7.8 cents per pound in November and 8 cents in October and yellow averaging 7.5 cents in November and 7.6 cents in October. Tea and

coffee showed little change. Cream of tartar was slightly lower at an average of 60.5 cents per pound.

Coal advanced in the average from \$16.77 per ton to \$17.41. Higher prices were reported from Bathurst, Three Rivers, Sherbrooke, St. Hyacinthe, Montreal, Kingston, Belleville, Orillia, Toronto, St. Catharines, Brantford, Galt, Guelph, Woodstock, London, St. Thomas, Chatham, North Bay, Sudbury and Cobalt. Bituminous coal showed a slight increase, averaging \$10.31 per ton. Hardwood, four feet long, was up from \$12.19 per cord to \$12.35. Soft wood was also slightly higher. Coal was steady. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to higher levels in November. No. 1 Manitoba Northern wheat, Fort William and Port Arthur basis, averaged \$1.42 per bushel as compared with \$1.27 in October. The low price was \$1.35½ reached near the beginning of the month and the high \$1.55 reached toward the end. The certainty of European crops having been over-estimated, together with adverse crop reports from the Argentine, were said to be the chief causes of the higher prices. Coarse grains for the most part moved in sympathy with wheat, oats rising from 48c. per bushel to 51c., American corn from 96c. per bushel to 97c. and Ontario barley from 65½c. per bushel to 68c. Flour advanced from \$8 per barrel in October to \$8.11 in November and rolled oats from \$3.30 per bag to \$3.45. Sugar advanced, due, it was said, to speculative influences, raw being \$3.46 per hundred in October and \$3.74 in November and granulated being \$5.84½ in October and \$5.98½ in November. Potatoes continued to advance, Quebec grades at Montreal being up from \$1.48 per bag to \$2.80 and Ontario potatoes at Toronto from \$1.71½ per bag to \$2.50-\$3. Toward the end of the month prices declined somewhat due to the United States embargo and to forced sales caused by the congested conditions on the railways. Straw at Toronto was down from \$9-\$9.50 per ton to \$8.83. Raw rubber, Ceylon, advanced from 97½c. per pound to \$1.05. Western cattle at Winnipeg rose from \$6.40 per hundred to \$6.57½, and choice steers at Toronto from \$6.97½ per hundred to \$7. Live hogs declined from \$12.68 per hundred to \$12.35 and dressed hogs from \$17.30 per hundred to \$16.50. Bacon was slightly lower at 35c.-36c. per pound. Lard was down from 19c.-19½c. per pound to 18½c.-19c. Butter prices were steady.

Cheese at Toronto advanced 2c. per pound to 27c. Fresh eggs at Montreal advanced from 55c.-60c. per dozen to 75c.-80c. Cotton was again somewhat lower at New York, being down from 22c. per pound to 21c. Cotton yarn declined from 45½c. per pound to 43½. Jute rose from \$14.29 per hundred to \$16.17, and hessians from \$14.25 per hundred to \$14.75. Foundry pig iron, delivered at Montreal, advanced from \$27.25 per ton to \$28.75 and basic

pig iron at the mill from \$21 per ton to \$23. Tin plates declined from \$5.50 per box to \$4.85 and steel sheets from \$3.30 per hundred to \$3.15. Spruce sidings at St. John rose from \$17 per M to \$21. Copper advanced from \$16.35 per hundred to \$16.55, silver from 70.9c. per ounce to 71.5c., tin from 63¼c. per pound to 64½c., antimony from 16c. per pound to 17½c. Lead declined slightly from \$9.55 per hundred to \$9.40.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices are named in all cases.

During September and October there was a fairly consistent downward tendency in wholesale prices, without much change in the cost of living. Prices and the cost of living continued upward in Belgium and France, and in the United States. The cost of living rose in various Italian cities in August, and in New Zealand in September.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number for October, on the base 1913=100, was 154.8, a decline of 0.8 per cent from the September level. Food declined 0.9 per cent and non-food declined 0.7 per cent. There were notable declines in cereals and in cotton, and a rise in the group "other foods."

The *Statist* index number (in continuation of Sauerbeck's figures) marked a further decline in prices in October, falling 1.8 per cent to 130.2, the lowest level recorded for two years. The materials index which showed a rise of 0.6 per cent in September reacted by 1.6 per cent in October. Food prices fell 2.3 per cent, after a decline of 3.8 for the previous month. The most notable declines were shown by vegetable and animal foods and sundries.

The *Economist* index number for November showed very little change in the general level of wholesale prices for November. The index number, on the base 1901-05=100, stood at 196.4. There was a substantial increase in prices of foodstuffs, but it was offset by a decline in textiles. Minerals also declined and there was a small increase in secondary foodstuffs.

The *Times* index number, on the base 1913=100, was at the end of October 2.3 per cent lower than a month before, being 155.1 as compared with 158.8 at the end of September. The new figure is the lowest recorded since the war. All the groups of food prices were lower, the index showing a fall of 3.6 per cent to 156.0. Industrial materials declined 1.4 per cent to 154.7. There were declines in cereals and in meat and fish, although eggs rose in price. In other food, sugar, butter, lard and potatoes were cheaper, while tea and cocoa were higher in price. There were

various movements in metals; cotton fell sharply owing to prospects of a record American crop; jute rose sharply and wool moderately.

Austria

WHOLESALE PRICES.—The official index number of the Federal Statistical Office, on the base 1st half of 1914=1, was 17,948, 1.9 per cent lower than the previous month. Both foods and industrial materials declined, foods falling more sharply.

Belgium

WHOLESALE PRICES.—The index number compiled by the Ministry of Industry and Labour, having as base prices in April, 1914=100, rose in August 1.4 per cent to 567, which is the highest level reached since November, 1924, which was 569. The principal changes were advances in food products, tar and products, fertilizer, and resin products, and a decline in raw rubber.

COST OF LIVING.—The index number of cost of living for a working class family of the lowest category rose 1.6 per cent in September to 139.93. Food rose 2.1 per cent and sundries rose 2.8 per cent. The other elements showed slight changes.

Denmark

WHOLESALE PRICES.—The official index number published in *Statistika Efterretninger*, having as base prices in 1913=100, declined 3.8 per cent in October to 179. There were declines in all groups except in fuel and cement, glass, etc., which remained unchanged.

Finland

WHOLESALE PRICES.—The index number of the Board of Customs, on the base 1913=100, showed that imports declined in price 1.3 per cent to 1,089 in September. Exports declined very slightly to 1,113.

COST OF LIVING.—The official index on the base July, 1914=100 declined 1.8 per cent. There were declines of 2.8 per cent in foods and of 2.9 per cent in fuel and lighting. The other groups showed no change.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, rose 3 per cent in October to 584. All foods declined 2 points to 480, vegetable foods rising while sugar, coffee and cocoa declined, and animal foods remained unchanged. Industrial materials rose in price 4.8 per cent to 674, minerals and metals rising 12.0 per

cent, textiles rising 2.7 per cent, and sundries rising 2.3 per cent.

Germany

WHOLESALE PRICES.—The official index number of the Federal Statistical Office, showing the level of gold prices, on the base 1913=100, was 123.7 for the October average, a decline of 1.7 per cent from the September average. The latest weekly figure available, that for November 11, showed an additional decline to 119.9. During the month under review farm products declined 2.5 per cent, and industrial materials declined 0.4 per cent. Goods produced declined 2.3 per cent and goods imported rose 0.4 per cent.

COST OF LIVING.—The official index number of gold prices, on the base 1913-14=100, showed for the second month a slight decline in October to 143.5. The principal change was a fall of 1.7 per cent in foods. Heat and light fell slightly, sundries rose slightly and rent and clothing showed no change.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base respective months of 1913=100, declined 3 points in October to 154. Raw materials declined one point to 143. Semi-manufactured goods declined 4 points to 149, and completely manufactured goods declined 2 points to 163. The only notable changes in the groups were declines in vegetable foodstuffs and in feed and forage.

COST OF LIVING.—The official index number compiled by the Board of Social Welfare for the beginning of October, on the base July, 1914=100, was 175, one point below the level three months earlier. Food, clothing and sundries were each down one point. Fuel and light declined five points and taxes rose 6 points.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-13=1000, fell six points to 1801 in September. The principal variations were rises in the groups agricultural products, wood, hides, etc., and coal, and declines in general merchandise and crockery, building materials, and chemicals and manures.

RETAIL PRICES.—The index number of retail prices of food, on the base 1909-13=1000, was 1634 in September, an increase of 8 points

over the August number. Groceries rose in price and dairy produce and meat declined.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1913=100, was down 1.3 per cent in October to 157.6. Farm products declined over 3 per cent owing to falling prices of grain, cattle, hogs, lambs, poultry, cotton and cottonseed, peanuts and tobacco. There were lower prices for foods, building materials and chemicals and drugs. No change was shown for the groups of cloths and clothing and house furnishing goods, while higher averages prevailed for fuels, metals, and miscellaneous commodities.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was \$14.4054 on December 1, being 0.6 per cent above its previous level. Some very important advances and declines were registered. "Six groups advanced, provisions and miscellaneous products showing largest gains, whereas seven other groups of commodities went off, with the most easing noted in textiles, fruits and hides." There were upward movements in all grains except corn, in live animals, except beeves, and most animal products, except lard.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life for the cost of living in Massachusetts, having as base average retail prices in 1913=100, was 165.1 in October, 0.7 per cent above the index for the previous month. Food and clothing rose slightly and other elements of the budget showed no change.

The index number of the National Industrial Conference Board, on the base July, 1914=100, was 169.7 in October an increase of 0.3 per cent over the September level. Foods rose 1.9 per cent and fuel and light rose 1.2 per cent. The other groups showed no change.

The Canada Cement Company, Limited, is endeavouring to establish a No Accident record for 1925 at its plant at Port Colborne, Ontario, and thus qualify for a trophy to be awarded by the Portland Cement Association, over one hundred cement plants in Canada and the United States are competing for the trophy. The LABOUR GAZETTE was informed on December 11 that the Port Colborne plant, employing about 250 workmen, had at that date operated for 471 days, without a single time-loss accident.

FUEL SUPPLIES AND THE ANTHRACITE COAL STRIKE IN THE UNITED STATES

THE principal development in the anthracite coal situation during November was the proposal of the Governor of Pennsylvania for a settlement. After conferring with the president of the United Mine Workers and the chairman of the Anthracite Operators' Scale Committee the Governor requested both scale committees to meet him on the afternoon of Saturday, November 28.

The operators' representatives stated that they would be unable to attend that day and requested a meeting with the Governor to consider his proposals before meeting him with the miners' representatives. The miners' committee met the Governor and agreed to consider his proposals which it was stated had been approved by committees of business men in the anthracite region, the chief points being as follows: An agreement on wages and working conditions, to run for five years; no increase in the cost of coal to consumers beyond the prices decided on for 1925 before the strike; creation of a Board of Award and Investigation which within six months should decide whether or not the miners should receive a wage increase, voluntary assignment of part of wages by individual miners as a substitute for the check-off; equalization of wages on the basis of the 1923 settlement by the existing Board of Conciliation (Commonwealth of Pennsylvania).

The miners accepted the proposals of the Governor as a basis for the negotiations of an agreement, and were prepared to resume work when an agreement on that basis had been reached.

The proposals of the Governor had been mailed to the operators' committee on the day for which the joint meeting had been called, and on November 30 the operators met and declined to accept the proposals, stating various objections, the principal being that the board to determine any wage increase would have no power to consider any decrease, that the proposal as to prices would compel the operators to attempt to maintain prices of coal for five years in order to pay high wages, an agreement as to prices would be illegal, and that the proposals as to the check-off would be unsatisfactory. The letter to the Governor also stated that two weeks before the operators had made a proposition to the miners through an intermediary for a five-year contract; arbitration of all differences and immediate resumption of work pending negotiations for a new agreement, and for the reconsideration of the terms of the con-

tract every six months, all points of differences to be arbitrated.

Early in December various bodies in the anthracite mining area formed committees and issued proposals for the termination of the strike, but nothing apparently resulted from their efforts.

In the areas in the United States where anthracite coal is the chief source of heat for dwellings much attention was given to the situation. The action of the Governors of the New England states in appointing a committee on fuel supply (reported in the LABOUR GAZETTE for November) was followed in New York and in New Jersey. In the City of New York demonstrations as to how to burn bituminous coal were given under the State Committee and the city appropriated \$25,000 to extend the number of demonstration plants. These committees made surveys of supplies and reported that a large percentage of householders had during the summer laid in full supplies of coal and plans were made to meet emergencies that might arise among the remainder, especially the poor and the sick.

The operators of mines in West Virginia, producing smokeless bituminous coal, arranged to give information as to the use of that coal in New England and other areas and applied to the Interstate Commerce Commission for lower freight rates on the railroads to those areas to make up for the falling off in shipments of anthracite coal. At hearings on this, representatives of the coal committees stated there was much suffering in some areas, that people were without fuel and a spell of severe weather would cause much pneumonia. Representatives of operators of bituminous coal mines in Pennsylvania stated that coal supplies were ample. The lower freight rates were granted for some areas and hearings were set for others.

The market for substitutes for anthracite coal was not so strong during November as during October when coke at the ovens more than doubled in price, rising from \$3.50 per ton to \$8.50-\$9. By the middle of November the price was down to \$6.50-\$7, and at the end of the month to \$5-\$5.50. Reports as to steps to end the strike were said to have considerable influence. It was expected that with colder weather in December the demand for coke would become strong again. Large shipments of Scotch and Welsh anthracite coal to New York were reported.

In Canada, the importation of anthracite coal from Wales and from Scotland was re-

ported to be heavy, and early in December the Federal Minister of Mines reported that the Dominion Fuel Board, which is under his jurisdiction, had made a survey of conditions and found that very many householders had acted on the information given out by the Board early in the summer and had secured full supplies of anthracite coal or coke or

other substitutes. The Board recommended that those not having a full supply should secure supplies of any substitute available in case of emergency, and stated that arrangements had been made to secure shipments of bituminous and lignite coal from Nova Scotia and Alberta respectively to Ontario and Quebec if any great scarcity developed.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Motorman's Negligence does not excuse Carelessness of Passenger on Street Railway

A passenger on a street railway went to the vestibule of the car, wishing to alight. The car had passed its regular stopping place, but as it was going very slowly on account of repairs to the pavement, the motorman slowed down further to allow the passenger off. Before the car stopped, however, the motorman contrary to his instructions opened the outside door of the vestibule, allowing the passenger to step off the car to the pavement. In doing so the passenger was thrown down, sustaining injuries. He sued for damages, claiming that the motorman had been negligent, or had wrongfully represented that it was safe to alight. The court held that although the motorman had violated rules in opening the exit door while the car was in motion, nevertheless it was not the motorman's act in so doing, but rather the passenger's own negligence in stepping off the car in an improper manner that was the cause of the accident. On appeal being taken against this decision, the Supreme Court of Alberta sustained the judgment of the lower court, and dismissed the appeal with costs, without written reasons.

(*Alberta—Wills versus City of Edmonton*).

Not all work done by Servant while in Service is for Benefit of Master

A miner while in the service of an employer staked and acquired two mining claims. The employer claimed a share in the value of these claims. The trial judge declared that the plaintiff was entitled to two-thirds of the proceeds of sale, basing his judgment on the principle that "the work done by a servant when in the employ of the master, at least of the character for which he is employed, is work done for the master." The employee contended, on the other hand, that the work of staking and acquiring the claims was not the work for which he was employed. On appeal being taken by the employee, the First

Divisional Court found that the principle referred to was too broadly stated by the trial judge, and that the law does not imply that all work done by a servant of a character similar to that which he was employed to do is done for the master, unless the circumstances be such as to lead the Court to the conclusion that in so implying it is giving effect to the real intention of the parties as evidenced by the contract of employment, interpreted in the light of the circumstances.

The appeal was therefore allowed with costs.

(*Ontario—Thwaites versus McKillop*).

Mechanic's Lien not invalidated by claimant's Error in Procedure

A mechanic claimed a lien in respect of two different pieces of work done on two distinct properties both belonging to the same owner. The mortgagees alleged that the lien, though valid in other respects, could not be supported because section 18 of the act requires two separate affidavits in such a case. Section 18 reads as follows:—

"A claim for lien may include claims against any number of properties, and any number of persons claiming liens upon the same property may unite therein, but where more than one lien is included in one claim each lien shall be verified by affidavit as provided in section 17."

The contention of the mortgagees was upheld by the Assistant Master when the case was first heard, but on appeal the Second Divisional Court held that the lower court was in error in its interpretation of this section, which was intended to cover a case in which two or more claimants joined in one lien, separate affidavits by each claimant being required in such cases. In the present case the plaintiff had only one claim, the aggregate of two contract prices, and that claim was verified by one affidavit. But even if two affidavits were necessary, and if the claimant in the present case neglected to take separate affidavits for each claim, the lien should not be invalidated by reason of a slip on the

part of the claimant. This was in accordance with section 19 of the act, which provides that a "substantial compliance with section 18 and other sections shall be sufficient, "and no lien shall be invalidated by reason of failure to comply . . . unless the . . . mortgagee or other person is prejudiced thereby." The plaintiff's appeal was allowed.

(Ontario—*Martello versus Barnet*).

Provisions of Mechanics' Lien Act must be complied with

The owner of a farm had a silo erected as part of the barn, and structural work was done by the makers of the silo upon a prepared foundation. The farmer subsequently mortgaged his farm without informing the mortgage company that the makers of the silo had any right or interest in the silo. The mortgage company then applied for an injunction restraining the defendants (i.e. the makers of the silo) from removing the silo in default of payment for their work thereon, and for a declaration that the silo was part of the freehold in land mortgaged to the plaintiffs. The defendants contended that the part of the silo made by them remained a chattel, and therefore did not pass to the plaintiffs under their land mortgage. The court found that the case was not one of the sale of a chattel, but of work done and materials provided, and that it therefore came under the Mechanics and Wage-Earners' Lien Act rather than the Conditional Sales Act. In neither case however had the legal requirements been met, and a perpetual injunction was therefore granted.

(Ontario—*Agricultural Development Board versus De Laval Company, Limited and Brown*).

Refusal of Unions to Handle Non-Union Material

The Federal Court of Appeals at Chicago recently declined to enjoin members of the Journeymen Stone Cutters' Association of America from refusing to work on non-union stone. Members of the Stone Cutters' Association refused to handle any work started by the strike-breakers and the employers asked Federal Judge Anderson, of Indianapolis, to issue an injunction against them on the ground that they were interfering with interstate commerce. The court denied the plea.

In upholding this decision, the Court of Appeals said: "We are of opinion that under the facts appearing, appellees were within their rights in thus undertaking to induce members of their craft to refrain from further cutting of stone which had before been partly cut

by non-union labour, notwithstanding such refusal might have tended in some degree to discourage builders from specifying appellants' stone and thus reduce the quantity of their product which would enter interstate commerce. The tendency in greater or less degree thereby to restrain interstate commerce may be conceded, but so long as it does not appear that appellees resorted or threatened to resort to unlawful acts or means to accomplish their lawful purpose there was no impropriety in Judge Anderson's refusal to grant a temporary injunction, and his order denying same is accordingly affirmed."

Injunction against the United Mine Workers of America in Non-union Coal Fields

The United States District Court rendered a decision on October 29, in regard to charges brought by certain coal companies against the United Mine Workers of America of conspiracy to restrain interstate commerce in non-union coal fields in Southern West Virginia. Temporary injunctions had been granted by lower courts in twenty cases dating from 1920 to 1922 restraining the Union from committing acts of interference with the mines of the several plaintiffs. These twenty cases were later, by agreement between the parties, consolidated for the purposes of trial.

The District Court, in its judgment, found that the Union had "unlawfully combined and conspired amongst themselves to monopolize and control all labour in the United States and on the American Continent engaged in the work of mining and producing coal and by that means to control and unreasonably restrict the production, shipment and sale of coal in interstate commerce;" and that the Union was "engaged in an unlawful combination and conspiracy with the operators producing bituminous coal in the so-called Central Competitive Field, embracing western Pennsylvania, Ohio, Indiana, and Illinois, to restrain and restrict unreasonably the interstate trade and commerce in coal of the coal operators of West Virginia, including the plaintiffs in these suits, by limiting and controlling the production and sale of the coal of said plaintiffs, and the operation of their mines, in competition with the coal produced at the mines of the operators of said central competitive field."

The judgment found further "that the defendants are endeavouring to coerce, force and compel the plaintiff herein to enter into closed-shop agreements, for the operation of their mines, with said organization, which agreements establish a basis wage scale which all operators of bituminous coal who enter

into wage agreements with said organization must adopt and adhere to, regardless of natural and working conditions, or the differences in cost of mining; and are attempting unlawfully to coerce, force and compel said plaintiffs to agree to a 'check-off' provision being inserted in such agreements."

The Court subsequently granted an injunction in each of the cases covered by the

judgment, permanently enjoining the Union from interfering with the employees of the plaintiffs or with men seeking employment at their mines; from trespassing upon the properties of the plaintiffs or inciting the employees to break their contract with the employers; and from aiding any person to occupy or hold, without right, any houses or other property of the mining companies.
